6 NYCRR Part 375

Environmental Remediation Programs

Statutory Authority: Environmental Conservation Law (ECL) Article 1, Section 0101; ECL Article 27, Titles 13 and 14; ECL Article 52, Title 3; ECL Article 56, Title 5; ECL Article 71, Title 36; ECL Article 3, Section 0301; Chapter 1, Laws of 2003; Chapter 577, Laws of 2004 and State Finance Law Article 6, Section 97-b)

Subpart 375-1 General Remedial Program Requirements

375-1.1 Purpose; applicability; construction; abbreviations; and severability.

375-1.2 Definitions.

375-1.3 Reserved.

375-1.4 Reserved.

375-1.5 Orders, agreements, and State assistance contracts.

375-1.6 Work plans and reports.

375-1.7 Site Classification and Administrative Designations.

375-1.8 Remedial program.

375-1.9 Certificate of completion.

375-1.10 Citizen participation.

375-1.11 Miscellaneous.

375-1.12 Permits.

375-1.1 Purpose; applicability; construction; abbreviations; and severability.

(a) The purpose of this Part is to provide for the orderly and efficient administration of ECL article 27, titles 13 and 14; ECL article 52, title 3; ECL article 56, title 5; ECL article 71, title 36; ECL article 3, section 0301 and SFL article 6, section 97-b. The requirements set forth in this Part apply to any order, agreement, stipulation or State assistance contract entered into by the department after the effective date of this Part and all work plans, reports, certificates, and other remedial program documents approved, accepted, or issued by the department on or after the effective date of this Part.

(b) This Part applies to the following:

(1) The development and implementation of remedial programs for inactive hazardous waste disposal sites, specifically under Subpart 375-2 of this Part, including, but not limited to, sites listed on the Registry which are either on the national priorities list (NPL) or are being addressed by the Department of Defense or the Department of Energy.

(2) The development and implementation of remedial programs for brownfield sites, specifically under Subpart 375-3 of this Part.

(3) The development and implementation of remedial programs for environmental restoration sites, specifically under Subpart 375-4 of this Part.

(4) The soil cleanup objectives for remedial programs, specifically under Subpart 375-6 of this Part.

(c) This Part is intended to promote the public good consistent with the policy of this State set out at ECL 1-0101 and accordingly this Part shall be construed so as to achieve that objective. As used herein, the singular includes the plural. Any reference herein to a particular provision of any State statute or regulation shall be deemed a reference to such provision as it may hereafter be amended or redesignated.

(d) This Subpart sets forth the general requirements that are common to the implementation of remedial programs under Subparts 375-2, 375-3 and 375-4 of this Part. Specific requirements which apply in addition to these general requirements are set forth in Subparts 375-2, 375-3 and 375-4 of this Part. If there is a conflict, this Subpart is superseded by any inconsistent provision of Subparts 375-2, 375-3 and 375-4 of this Part.

(e) Abbreviations.

(1) Statutes.

(i) *CERCLA* means the Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended, 42 USC section 9601, et seq.;

(ii) *CPLR* means the Civil Practice Law and Rules;

(iii) *ECL* means the Environmental Conservation Law;

(iv) *EL* means the Executive Law;

(v) *GML* means the General Municipal Law;

(vi) *GOL* means the General Obligations Law;

(vii) *NL* means the Navigation Law;

(viii) *NPCL* means the Not-for-Profit Corporation Law;

(ix) *PHL* means the Public Health Law;

(x) *RCRA* means Resource Conservation and Recovery Act of 1976 as amended, 42 U.S.C. Section 6901, et seq.;

(xi) *RPL* means the Real Property Law;

(xii) *SFL* means the State Finance Law;

(xiii) *SARA* means the Superfund Amendments and Reauthorization Act of 1986, PL 99-499 Stat 1613, et seq.;

(xiv) *USC* or *USCA* means United States Code.

(2) Regulations:

(i) *6 NYCRR* means Title 6 of the Official Compilation of New York Codes, Rules and Regulations;

(ii) *10 NYCRR* means Title 10 of the Official Compilation of New York Codes, Rules and Regulations;

(iii) *19 NYCRR* means Title 19 of the Official Compilation of New York Codes, Rules and Regulations.

(f) If any provision of this Part or its application to any particular person or circumstance is held invalid, the remainder of this Part and its application to other persons and circumstances shall not be affected thereby.

(g) The following documents have been incorporated by reference and filed with the Department of State. The documents are also available for inspection and copying at the Department of Environmental Conservation office at 625 Broadway, Albany, New York, 12233-7011:

(1) Standards E1527-21 (2021), E1527- (2013), E1527-05 (2005) and E1527-97 (1997), published by ASTM International, 100 Barr Harbor Drive, West Conshohocken, Pennsylvania, 19428; and

(2) The National Oil and Hazardous Substances Pollution Contingency Plan (NCP), Title 40 of the Code of Federal Regulations (CFR) Part 300, which is available from the United States Environmental Protection Agency (EPA) on its website at <http://www.epa.gov>.

375-1.2 Definitions.

The definitions set forth in ECL 27-1301; ECL 27-1405; and ECL 56-0502, some of which are clarified in this section, and the additional definitions set forth in this section, shall apply to these regulations. Certain definitions which apply only to the individual programs are set forth in Subparts 375-2, 375-3, 375-4 and 375-6 of this Part respectively.

(a) *All appropriate inquiries* means, for purposes of ECL 27-1323(4)(c):

(1) compliance with the procedures of ASTM Standard 1527-21 for acquisitions completed on or after the effective date of this rule; or

(2) compliance with the procedures of ASTM Standard 1527-13 for acquisitions completed on or after December 20, 2013 and before the effective date of this rule; or

(3) compliance with the procedures of ASTM Standard 1527-05 for acquisitions completed on or after December 14, 2006 and before December 20, 2013; or;

(4) compliance with the procedures of ASTM Standard 1527-97 for acquisitions after May 31, 1997 and before December 14, 2006; or

(5) compliance with the industry standards and guidance on or before May 31, 1997.

(b) *Brownfield site* means any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or environmental standards, criteria or guidance adopted by the department that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations. Such term shall not include real property identified in section 375-3.3(b) of this Part.

(c) *Brownfield site remedial program* means a remedial program, as defined in subdivision 375-1.2(aq) of this section, at a brownfield site pursuant to a brownfield site cleanup agreement.

(d) *Certificate holder* means the party(ies) set forth in the certificate of completion issued by the department, as well as such party's successors and assigns who have received a transfer of such certificate in accordance with subdivision 375 1.9(f) of this Subpart.

(e) *Change of use* means the transfer of title to all or part of the site, any change to the tax lot designation or boundary, the erection of any structure on such site, the creation of a park or other public or private recreational facility on such site, or any activity that is likely to

disrupt or expose contamination or to increase direct human exposure; or any other conduct that will or may tend to significantly interfere with an ongoing or completed remedial program at such site or the continued ability to implement the engineering and institutional controls associated with such site. Change of use does not include work performed under a department approved work plan.

(f) *Commissioner* means the Commissioner of the New York State Department of Environmental Conservation or such individual's designee.

(g) *Concentrated solid or semi-solid hazardous wastes* means solid or semi solid hazardous wastes present in surface or subsurface soil, surface water, sediment or groundwater in a concentrated form, such as precipitated metallic salts, metal oxides, or chemical sludges.

(h) *Contaminant* means hazardous waste and/or petroleum as such terms are defined in subdivisions (x) and (ah) of this section.

(i) *Contaminated or contamination* means the presence of a contaminant in any environmental media, including soil, surface water, sediment, groundwater, soil vapor, ambient air or indoor air.

(j) *Days* means calendar days.

(k) *Department* means the New York State Department of Environmental Conservation.

(l) *Disposal* means the abandonment, discharge, deposit, injection, dumping, spilling, leaking or placing of any contaminant so that such contaminant or any related constituent thereof may enter the environment. *Disposal* also means the thermal destruction of a contaminant and the burning of a contaminant as fuel for the purpose of recovering usable energy.

(m) *Document repository* means a repository of site remedial program documents approved by the department or released for public comment, which may be in electronic form, established in a publicly accessible building near the location of such site.

(n) *Ecological resources* means all flora and fauna and the habitats that support them, excluding such biota as pets, livestock, agricultural and horticultural crops.

(o) *Emergency* means a spill, or other event or condition, whether natural or human-made, as a result of which a release or threatened release of contamination presents an immediate threat to life, health, property, or natural resources.

(p) *Engineering control* means any physical barrier or method employed to actively or passively contain, stabilize, or monitor contamination, restrict the movement of contamination to ensure the long-term effectiveness of a remedial program, or eliminate potential exposure pathways to contamination. Engineering controls include, but are not limited to, pavement, caps, covers, subsurface barriers, vapor barriers, slurry walls, building ventilation systems, fences, access controls, provision of alternative water supplies via connection to an existing public water supply, adding treatment technologies to such water supplies, and installing filtration devices on private water supplies.

(q) *Environment* means any water including surface or groundwater, sediment, water vapor, any land including land surface or subsurface, air including soil vapor, fish, wildlife, other biota, all other natural resources and humans.

(r) *Environmental easement* means an interest in real property, created under and subject to the provisions of ECL article 71, title 36 which contains a use restriction and/or a prohibition on the use of land in a manner inconsistent with engineering controls; provided that no such easement shall be acquired or held by the state which is subject to the provisions of article 14 of the constitution of the State of New York.

(s) *Environmental restoration project* means a project to investigate or to remediate contamination pursuant to ECL article 56, title 5.

(t) *Feasible* means suitable to site conditions, capable of being successfully carried out with available technology, implementable and cost effective.

(u) *Financial assurance* means financial mechanisms, which include, but are not limited to, surety bonds, trust funds, letters of credit, insurance, or a multiple of financial mechanisms, as determined to be adequate by the department, to ensure the long-term implementation, maintenance, monitoring and enforcement of the engineering and institutional controls at a remedial site.

(v) *Grossly contaminated media* means soil, sediment, surface water or groundwater which contains sources or substantial quantities of contamination in the form of NAPL, as defined in subdivision 375-1.2(ac) of this section, that is identifiable either visually, through strong odor, by elevated contaminant vapor levels or is otherwise readily detectable without laboratory analysis.

(w) *Groundwater* means water below the land surface in a saturated zone of soil or rock. This includes perched water separated from the main body of groundwater by an unsaturated zone.

(x) *Hazardous waste* means a waste which appears on the list or satisfies the characteristics promulgated by the commissioner pursuant to ECL 27-0903 and any substance which appears on the list promulgated pursuant to ECL 37-0103; provided, however, that the term *hazardous waste* does not include:

(1) natural gas, natural gas liquids, liquefied natural gas, synthetic gas usable for fuel, or mixtures of natural gas and such synthetic gas;

(2) the residue of emissions from the engine exhaust of a motor vehicle, rolling stock, aircraft, vessel, or pipeline pumping station engine;

(3) source, byproduct, or special nuclear material from a nuclear incident, as those terms are defined in the atomic energy act of 1954, if such release is subject to requirements with respect to financial protection established under section 170 of such act (42 USC 2210) or, for the purpose of section 104 of CERCLA, or any other response action, any source, byproduct, or special nuclear material from any processing site designated under section 102(a)(1) or 302(a) of the Uranium Mill Tailings Radiation Control Act of 1978 (42 USC 7912(a)(1) or 7942(a)); nor

(4) petroleum as defined in subdivision (ah) of this section, even if appearing on the list promulgated pursuant to ECL 37-0103.

(y) *Inactive hazardous waste disposal site* means any area or structure used for the long-term storage or final placement of hazardous waste including, but not limited to, dumps, landfills, lagoons and artificial treatment ponds, as to which area or structure no permit or

authorization issued by the department or a Federal agency for the disposal of hazardous waste was in effect after the effective date of ECL article 27 title 13 and any inactive area or structure on the NPL established under the authority of 42 USCA section 9605, et seq.

(z) *Inactive hazardous waste disposal site remedial program* means a remedial program, as defined in subdivision (ap) of this section, at an inactive hazardous waste disposal site.

(aa) *Institutional control* means any non-physical means of enforcing a restriction on the use of real property that limits human or environmental exposure, restricts the use of groundwater, provides notice to potential owners, operators, or members of the public, or prevents actions that would interfere with the effectiveness of a remedial program or with the effectiveness and/or integrity of operation, maintenance, or monitoring activities at or pertaining to a remedial site.

(ab) *Interim remedial measure* means activities to address both emergency and non-emergency site conditions, which can be undertaken without extensive investigation and evaluation, to prevent, mitigate or remedy environmental damage or the consequences of environmental damage attributable to a site, including, but not limited to, the following activities: construction of diversion ditches; collection systems; drum removal; leachate collection systems; construction of fences or other barriers; installation of water filters; provision of alternative water systems; the removal of source areas; or plume control.

(ac) *Non-aqueous phase liquid or NAPL* means a contaminant that is a liquid which may be denser or lighter than water and does not mix easily or dissolve in water, but remains as a separate phase.

(ad) *Off-site contamination* means any contamination which has emanated from a remedial site beyond the real property boundaries of such site, via movement through air, indoor air, soil vapor, soil, sediment, surface water or groundwater.

(ae) *On-site contamination* means any contamination located within the real property boundaries of a remedial site.

(af) *Operable unit* means a portion of the remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable units may address geographical portions of a site, media specific action, specific site problems, or an initial phase of an action, or may consist of any set of actions performed over time or any actions that are concurrent but located in different parts of a site. An operable unit may be proposed by the department or a remedial party; however, only the department can approve the use of operable units.

(ag) *Person* means an individual, trust, firm, joint stock company, limited liability company, corporation, joint venture, partnership, association, state, municipality, commission, political subdivision of a state, public benefit corporation or any interstate body. Provided however, a person shall not include a person as defined in ECL 27-1323.

(ah) *Petroleum* means oil or petroleum of any kind and in any form including, but not limited to, oil, petroleum, fuel oil, oil sludge, oil refuse, oil mixed with other wastes and crude oils, gasoline and kerosene.

(ai) *Presumptive remedy* means technologies or approaches appropriate for the remediation of specific types of contamination which, based on historical patterns of remedy selection and the department's scientific and engineering evaluation of performance data, can be used to accelerate the remedy selection process.

(aj) *Professional engineer* means an individual or firm licensed or otherwise authorized under article 145 of the Education Law of the State of New York to practice engineering.

(ak) *Professional geologist* means an individual or firm licensed or otherwise authorized under article 145 of the Education Law of the State of New York to practice geology.

(al) *Qualified environmental professional* means a person who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding the presence of releases or threatened releases to the surface or subsurface of a property or off-site areas, sufficient to meet the objectives and performance factors for the areas of practice identified by this Part. Such a person must:

(1) hold a current professional engineer's or a professional geologist's license or registration issued by the State or another state, and have the equivalent of three years of full-time relevant experience in site investigation and remediation of the type detailed in this Part; or

(2) be a site remediation professional licensed or certified by the Federal government, a state or a recognized accrediting agency, to perform investigation or remediation tasks consistent with department guidance and have the equivalent of three years of full-time relevant experience.

(am) *Registry* means the registry of inactive hazardous waste disposal sites maintained by the department pursuant to ECL 27-1305.

(an) *Release* means any pumping, pouring, emitting, emptying, or leaching, directly or indirectly, of a contaminant so that the contaminant or any related constituent thereof, or any degradation product of such a contaminant or of a related constituent thereof, may enter the environment, or the disposal of any contaminant.

(ao) *Remedial investigation* means a process undertaken to determine the nature and extent of contamination at a site or operable unit of a site. The remedial investigation emphasizes data collection, and generally is performed in support of the selection of a remedy. The scope of a remedial investigation is more fully described in section 375-1.8(e) of this Subpart.

(ap) *Remedial party* means a person implementing a remedial program at a remedial site pursuant to an order, agreement or State assistance contract with the department.

(aq) *Remedial program* means all activities undertaken to investigate, design, eliminate, remove, abate, control, or monitor existing health hazards, existing environmental hazards, potential health hazards, potential environmental hazards in connection with a site, and all activities including, but not limited to, the following undertaken to manage waste and contamination from a site:

(1) site characterizations;

(2) remedial investigation activities needed to develop and evaluate remedial alternatives;

- (3) interim remedial measures;
- (4) design activities;
- (5) remedial actions, including, but not limited to, construction related activities and the implementation of remedial treatment technologies, including without limitation grading, contouring, trenching, grouting, capping, excavation, transporting, incineration and other thermal treatment, chemical treatment, biological treatment, or construction of groundwater and/or leachate collection and treatment facilities;
- (6) post-remedial site management including, but not limited to, the operation, maintenance, monitoring of remedial treatment technologies, and the certification of institutional and engineering controls;
- (7) restoration of the environment;
- (8) appropriate involvement by local governments and by the public; and
- (9) oversight by the department.

(ar) *Remedial site* or *site* means any real property consisting of a parcel, adjacent properties or parcels, or portions of properties or parcels, identified as:

- (1) an inactive hazardous waste disposal site or such area as described in section 375-2.7(b)(4) of this Part;
- (2) a brownfield site; or
- (3) an environmental restoration project, as defined by the State assistance contract.

(as) *Responsible party* means any of the following, subject to the defenses, exemptions, and/or limitations set forth at ECL 27-1323:

- (1) any person who currently owns or operates a site or any portion thereof;
- (2) any person who owned or operated a site or any portion thereof at the time of disposal of the contaminant;
- (3) any person who generated any contaminants disposed at a site;
- (4) any person who transported any contaminants to a site selected by such person or entity;
- (5) any person who disposed of any contaminants at a site;
- (6) any person who arranged for:
 - (i) the transportation of any contaminants to a site; or,
 - (ii) the disposal of any contaminants at a site; and
- (7) any other person who is responsible according to the applicable principles of statutory or common-law liability pursuant to ECL 27-1313(4) or other State law.

(at) *Sediment* means unconsolidated particulate material found at the bottom of lakes, rivers, streams and other water bodies at bed elevations equal to or lower than the mean high water level as defined in section 608.1(i) of this Title.

(au) *Site characterization* means a preliminary investigation for the purpose of determining whether a potential site should be listed on the Registry.

(av) *Site contact list* or *brownfield site contact list* means a list of persons, government agencies, groups, or organizations, including, but not limited to, the chief executive officer and zoning board of each county, city, town and village in which such site is located, the public

water supplier which serves the area in which such site is located, any site residents, adjacent property owners, any person who has requested to be placed on the site contact list, and the administrator of any school or day care facility located on the site for the purposes of posting and/or dissemination at the facility. Provided, however, that where the site or adjacent real property contains multiple dwelling units, the remedial party may propose an alternative method, consistent with the citizen participation goals set forth in section 375-1.10 of this Subpart, for providing such notice in lieu of mailing to each individual.

(aw) *Site management* means the activities undertaken as the last phase of the remedial program at a site which continue after a certificate of completion is issued. Site management is conducted in accordance with a site management plan, which identifies and implements the institutional and engineering controls required for a site, as well as any necessary monitoring and/or operation and maintenance of the remedy.

(ax) *Source area* or *source* means a portion of a site or area of concern at a site where the investigation has identified a discrete area of soil, sediment, surface water or groundwater containing contaminants in sufficient concentrations to migrate in that medium, or to release significant levels of contaminants to another environmental medium, which could result in a threat to public health or the environment. A source area typically includes, but is not limited to, a portion of a site where a substantial quantity of any of the following are present:

- (1) concentrated solid or semi-solid hazardous substances;
- (2) non-aqueous phase liquids; or
- (3) grossly contaminated media.

(ay) *Technical assistance grant* means a grant provided in accordance with ECL 27-1316 and ECL 27-1417(4).

(az) *Waste* means any garbage, refuse, sludge from a waste water treatment plant, water supply treatment plant, or air pollution control facility, and other discarded material, whether or not such material may eventually be used for some other purpose, including solid, liquid, semi-solid, or contained gaseous material resulting from industrial, commercial, mining, and agricultural operations or from community activities, and source, special nuclear or by-product material as defined in the Atomic Energy Act of 1954, as amended, except as may be provided by existing agreements between the State of New York and the government of the United States, but does not include solid or dissolved material in domestic sewage, or solid or dissolved materials in irrigation return flows or industrial discharges which are point sources subject to permits under ECL article 17.

(ba) *Water supplier* or *public water supplier* means any public water system which provides water to the public for human consumption through pipes or other constructed conveyances, if such system has at least five service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.

375-1.3 Reserved.

375-1.4 Reserved.

375-1.5 Orders, agreements, and State assistance contracts.

(a) Notice of order, agreement, or State assistance contract.

(1) Where the remedial party owns the remedial site, such party shall:

(i) within 30 days of execution by the commissioner of the order, agreement (excluding Brownfield Cleanup Agreements) or State assistance contract, record a notice of such instrument in the office of the recording officer for the county or counties where the remedial site is situated in the manner prescribed by RPL article 9; and

(ii) provide written notice of the order, agreement or State assistance contract, and the status of the remedial program, to any prospective purchaser or lessee of any interest in any portion of the remedial site.

(2) Where the remedial party does not own the remedial site:

(i) the remedial party shall, within 30 days of execution by the commissioner of the order, agreement, or State assistance contract, provide written notice of such instrument to the owner of the remedial site;

(ii) the owner of the remedial site shall, within 30 days of receipt of such notice from the remedial party, record a notice of such instrument (excluding Brownfield Cleanup Agreements) in the office of the recording officer for the county or counties where the remedial site is situated in the manner prescribed by RPL article 9; and

(iii) the owner of the remedial site shall provide written notice of the order, agreement or State assistance contract, and the status of the remedial program, to any prospective purchaser or lessee of any interest in any portion of the remedial site.

(b) In addition to such further terms and conditions as the department may require in the order, agreement or State assistance contract, the following provisions apply when a remedial party is implementing a remedial program under an order, agreement, or State assistance contract with the department. The order, agreement or State assistance contract shall be binding on each party, its successors and assignees while in effect. No change in the ownership or corporate or business status of any party, or of the site shall alter any signatory's responsibilities under this order, agreement or State assistance contract.

(1) Emergencies. The remedial party shall notify the department's project manager by noon of the next business day, upon knowledge of any condition posing an emergency as set forth at section 375-1.2(o) of this Subpart. In the event that any action or occurrence under the order, agreement or State assistance contract causes or threatens an emergency situation, the remedial party shall promptly take all appropriate action to prevent, abate, or minimize such emergency in accordance with applicable law. Nothing in this paragraph shall be deemed to limit the authority of the department to take, direct, or order all appropriate action to protect public health and the environment or to prevent, abate, respond to, or minimize an actual or threatened release from the site.

(2) Dispute resolution.

(i) The remedial party shall submit any dispute relating to the order, agreement or State assistance contract no more than 15 days after it knew or should have known of the facts which are the basis of the dispute. Such dispute will be submitted in writing to the director of the division of environmental remediation, who will assign the designated individual to hear the dispute. The designated individual will communicate to the remedial party and department staff the submission deadlines and requests for additional information that the department deems necessary to render a written decision. The designated individual will furnish a copy of the written decision to the remedial party, which shall be the final agency determination, unless the remedial party files a written appeal of that decision with the designated appeal individual within 20 days of receipt of that decision.

(ii) Upon receipt of the written appeal pursuant to subparagraph (2)(i) of this paragraph, the individual designated by the director of the division of the environmental remediation to hear the appeal will review the record and decision. The designated appeal individual will take one of the following actions, with written notice to the remedial party:

- (a) remand the matter to the program staff for further negotiation or information if it is determined that the matter is not ripe for review;
- (b) determine that there is no need for further action, and that the determination of the designated individual is confirmed;
- (c) request additional information or documentation; or
- (d) make a determination on the record as it exists.

(iii) The decision of the designated appeal individual shall be the final agency decision. Such final agency decision may be reviewed pursuant to CPLR article 78.

(iv) The designated individual to:

- (a) hear disputes is a bureau director in the division of environmental remediation; and
- (b) review dispute decisions is the assistant director of the division of environmental remediation

(v) The invocation of dispute resolution shall not extend, postpone, or modify obligations of the remedial party with respect to any item not in dispute unless or until either:

- (a) the department agrees in writing to an extension, postponement or modification; or
- (b) a court determines otherwise.

(vi) The department shall keep an administrative record of dispute resolution proceedings.

(3) Payment of State costs.

(i) Within 45 days after receipt of an itemized invoice from the department (or the timeframe specified on the invoice or in the associated order or

agreement), the remedial party shall pay to the department a sum of money which shall represent reimbursement for State costs, which shall include costs associated with negotiating the order or agreement, and all costs associated with the order or agreement up to and including the date upon which the certificate of completion is issued, the department approves the final site management report, or the order or agreement is terminated, whichever is later. If the remedial party is also responsible for reimbursement of past State costs, associated with remedial activities conducted at the site such reimbursement must also be made within the timeframe specified in the associated order or agreement, or if not specified, within 45 days after the receipt of an itemized invoice from the department.

(ii) The invoice shall be calculated and documented as follows:

- (a) personal service costs shall be documented by reports of direct personal service;
- (b) approved agency fringe benefit and indirect cost rates shall be applied;
- (c) non-personal service costs shall be documented by expenditure reports; and
- (d) except as otherwise provided by statute or regulation, the department is not obligated to provide any other documentation of costs.

(iii) Each such payment shall be made payable to the Commissioner of the department and shall be sent to the address specified on the invoice or, if no invoice is sent, in the associated order or agreement.

(iv) The remedial party shall provide written notification within 90 days of any change in the address of the invoice contact specified in the associated order or agreement. If the department is unable to deliver an invoice due to lack of such notification, enforcement action may be taken on the unpaid invoice.

(v) A remedial party may contest, in writing, invoiced costs if it believes:

- (a) the cost documentation contains clerical, mathematical, or accounting errors; or
- (b) the costs are not related to the State's activities at the site.

(vi) If a remedial party objects to an invoiced cost, such party shall pay all costs not objected to within the 45-day time frame (or the timeframe specified on the invoice or in the associated order or agreement), and shall, within 30 days of receipt of an invoice, identify in writing all costs objected to and identify the basis of the objection. This objection shall be filed with the division of environmental remediation director or designee who shall have the authority to waive the obligation to pay disputed costs. Within 45 days of the department's determination of the objection, which determination shall constitute a final agency decision, the remedial party shall pay to the department the amount which the division of environmental remediation director determines is owed; provided,

however, that such payment shall be stayed until 45 days after the final determination of any challenge which is brought pursuant to article 78 of the Civil Practice Law and Rules.

(4) Force majeure.

(i) No remedial party shall suffer any penalty or be subject to any proceeding or action if it cannot comply with any requirement of an order, agreement or State assistance contract to implement all or part of a remedial program if the failure to comply is the result of a force majeure event. A *force majeure* event shall include acts of God, work stoppages due to labor disputes or strikes, fires, explosions, epidemics, riots, war rebellion, sabotage or any other fact or circumstance beyond the reasonable control of the remedial party. If a failure of or delay in performance by the remedial party results from the occurrence of a force majeure event, the delay shall be excused and the time for performance extended by a period equivalent to the time lost because of the force majeure event, if and to the extent that the:

(a) delay or failure was beyond the control of the remedial party affected and not due to its fault or negligence;

(b) delay or failure was not extended because of the remedial party's failure to use all reasonable diligence to overcome the obstacle or to resume performance immediately after such obstacle was overcome;

(c) remedial party provides notice to the department within five days of the onset of the event, that it is invoking the protection of this provision; and

(d) notice shall include the measures taken and to be taken to prevent or minimize any delays and may request an appropriate extension or modification as appropriate.

(ii) the remedial party has the burden of proving by a preponderance of the evidence that an event qualifies as a force majeure event under this paragraph.

(5) Resolution of liability.

(i) To the extent authorized under 42 USC section 9601, et seq.; GOL section 15-108, and any other applicable law, the remedial party shall be deemed to have entered into an administrative settlement of liability and to have resolved its liability to the State for purposes of contribution protection provided by 42 USC section 9613(f)(2) for *matters addressed* pursuant to and in accordance with such order, agreement or State assistance contract.

(ii) *Matters addressed* in the order, agreement or State assistance contract shall mean all response actions taken by the remedial party to implement the order, agreement or State assistance contract for the site and all response costs incurred and to be incurred by any person or party in connection with the work performed under such order, agreement or State assistance contract, which

costs have been paid by the remedial party, including reimbursement of State costs pursuant to the order, agreement or State assistance contract.

(iii) Furthermore, to the extent authorized under 42 USC section 9613(f)(3)(B), by entering into such administrative settlement of liability, if any, for some or all of the response action and/or for some or all of the costs of such action, the remedial party is entitled to seek contribution from any person except those who are entitled to contribution protection under 42 USC section 9613(f)(2) or, if applicable, ECL 27-1421.

(6) Termination of orders, agreements and State assistance contracts. The department may terminate orders, agreements and State assistance contracts for cause including, but not limited to, if the remedial party fails to substantially comply with the order, agreement, or the contract terms and conditions, including, without limitation, the failure to initiate, proceed with, or complete the remedial program in accordance with the approved schedule prepared by the responsible party, volunteer, or participant in relation to a site that has been deemed a significant threat and provided that dispute resolution has not been commenced pursuant to section 375-1.5(b)(2) or 375-1.5(b)(3)(v), or the failure to pay State costs described in paragraph (3) of this subdivision for a substantial period of time (not less than 30 days) and after an opportunity to cure has been provided.

375-1.6 Work plans and reports.

(a) Work plans. All activities undertaken as part of a remedial program for a site shall be detailed in a department-approved work plan, unless determined otherwise by the department.

(1) All work plans shall:

(i) be prepared and implemented in accordance with the requirements of all applicable laws, rules and regulations; and

(ii) consider applicable department guidance.

(2) A proposed work plan shall be submitted for department review and approval, as set forth in subdivision (d) of this section, and shall include, at a minimum, a schedule for performance of anticipated activities with sufficient detail to allow the department to evaluate that work plan.

(3) During all field activities conducted under a department approved work plan, the remedial party shall have a qualified environmental professional, meeting the requirements set forth in section 375-1.2(a) of this Subpart, or their properly trained representative on site to supervise the activities undertaken. As part of the on-site supervisory responsibilities, a daily report of activities is to be generated and submitted to the department. The daily reports will be submitted to the department Project Manager by the end of the following day and will include:

(i) an update of progress made during the reporting day;

(ii) the locations of work/site activities identified on a site map;

(iii) quantities and descriptions of materials imported to and exported from the site;

(iv) a summary of any and all complaints with relevant details (names, phone numbers);

(v) a summary of Community Air Monitoring Plan findings, including exceedances;

(vi) an explanation of notable site conditions; and

(vii) any deviations from the approved work plan.

(4) The department shall be notified at least seven days in advance of, and be allowed to attend, any field activities to be conducted under a department approved work plan, as well as any pre-bid meetings, job progress meetings, substantial completion meeting and inspection, and final inspection and meeting; provided, however that the department may be excluded from portions of meetings where privileged matters are discussed.

(b) Reports.

(1) All reports including, but not limited to, design documents, plans or site management plans, with the exception of the final engineering report which is addressed in subdivision (c) of this section; which are submitted to the department in draft or final form pursuant to an order, agreement or State assistance contract for any phase of the remedial program are to be submitted in accordance with the schedule contained in an approved work plan, report or design document or any subsequent schedule agreed to and approved by the department.

(2) Reports shall include, but not be limited to, all:

(i) environmental or health data generated relative to the site;

(ii) information, other than in subparagraph (i) of this paragraph, obtained as part of the implementation of the work plan; and

(iii) assessments and evaluations required by the work plan.

(3) Each final report shall contain a certification by the person with primary responsibility for the day-to-day performance of the activities under the work plan. The certification shall:

(i) be on such form as provided by the department and shall be included in the final report provided for approval;

(ii) be completed by a professional engineer, or such other qualified environmental professional as the department may find acceptable; and

(iii) certify that all activities were performed in full accordance with the department approved work plan and any department approved modifications.

(4) Each report submitted to the department shall include a schedule for the submission of any work plans required in the report.

(c) Final engineering report.

(1) In accordance with the schedule contained in an approved remedial work plan or remedial design, a final engineering report shall be submitted that includes but is not limited to:

(i) a summary of any interim remedial measures and remedial actions taken at the site. The final engineering report must describe the activities completed in accordance with the approved remedial design, remedial action work plan and/or interim remedial measure work plan, in addition to providing the

data to document the completed remedial construction activities. This will include, but not be limited to:

- (a) a description of any changes made to the approved design and/or work plan and documentation as to why the changes were made, including the department's approval of the change;
 - (b) a listing of the waste streams, quantity of disposed materials and facility(ies) where such materials were disposed including documentation of associated manifests and bills of lading;
 - (c) a listing of imported backfill and cover soils, including sources of material and analytical test results;
- (ii) site boundaries;
 - (iii) a description of any institutional controls that will be used, including mechanisms to implement, maintain, monitor, and enforce such controls; and
 - (iv) a site management plan, as set forth in section 375-1.2(a) of this Subpart.

(2) The final engineering report shall be prepared in accordance with all relevant statutes and regulations and upon consideration of applicable guidance.

(3) The final engineering report shall be prepared by a professional engineer with primary responsibility for the day-to-day performance of the remedial program activities.

(4) The final engineering report shall include a certification by the professional engineer, that:

- (i) such party is, and at all pertinent times hereinafter mentioned was, a currently registered professional engineer;

- (ii) such party is a professional engineer (sole practitioner) or is a professional engineer employed by an engineering firm with an appropriate Certificate of Authorization issued by the NYS Department of Education to practice engineering; and

- (a) such certifying party either directly supervised all engineering work required for the implementation of the remedial program or completed the engineering work required for the implementation of the remedial program in accordance with State Education Law, Section 145; or

- (b) such party delegated or subcontracted the engineering work required for the implementation of the remedial program to another certifying professional engineer (sole practitioner) or engineering firm with a Certificate of Authorization in accordance with State Education Law, Section 145.

- (iii) all requirements of the remedial program have been complied with and the remediation was conducted consistent with the department's decision document, record of decision, or statement of basis, the approved remedial design, remedial action work plan, and/or interim remedial measure work plan,

including the engineering review of all contractor submittals and field changes approved for the project;

(iv) the data demonstrates that remediation requirements have been or will be achieved in accordance with time frames contained in the approved remedial program;

(v) all activities described in this report have been performed in accordance with the remedial program and any subsequent changes as agreed to and approved by the department;

(vi) any use restrictions, institutional and/or engineering controls, and/or any site management plan requirements are contained in a duly recorded environmental easement and that every municipality in which the site is located has been notified of the environmental easement;

(vii) any required financial assurance mechanisms required in accordance with section 375-1.11(c) of this Subpart have been executed; and

(viii) uses certification language provided or approved by the department.

(5) The department shall review the final engineering report, the submittals made in the course of the remedial program, and any other relevant information regarding the site and make a determination as to whether the goals of the remedial program have been or will be achieved in accordance with established time frames.

(6) The department will issue a written certificate of completion, upon the department's approval of the final engineering report.

(d) Review of work plans and reports.

(1) The department shall approve, modify, or reject a proposed work plan or report submitted pursuant to an order, agreement or State assistance contract.

(2) Approval. Upon the department's written approval of a work plan or report, such work plan or report shall:

(i) be incorporated into and become an enforceable part of any order, agreement or State assistance contract pertaining to the site's remedial program;

(ii) in the case of a:

(a) work plan, be implemented in accordance with the schedule contained therein; or

(b) report, the approval will initiate the next phase of the remedial program in accordance with the order, agreement or State assistance contract; and

(iii) such work plan or report shall be placed by the remedial party in the site document repository.

(3) Modification. If the department requests modification of a work plan or report by the remedial party, or provides a department modified work plan or report, the reasons for such modification shall be provided in writing. Within 15 days of the notice, the remedial party shall elect in writing to:

(i) modify the work plan or report as requested by the department, or accept a department modified work plan or report, within 30 days of receipt of the written notice;

(ii) invoke dispute resolution, as set forth in section 375-1.5(b)(2) of this Subpart; or

(iii) in the case of a brownfield site remedial program, terminate the agreement in accordance with section 375-3.5 of this Part.

(4) Disapproval. If the department disapproves a work plan or report, the reasons for such disapproval shall be provided in writing. Within 15 days of that written notice, the remedial party shall elect in writing to:

(i) modify the disapproved work plan or report, within 30 days of receipt of the written notice;

(ii) invoke dispute resolution, as set forth in section 375-1.5(b)(2) of this Subpart; or

(iii) in the case of a brownfield site remedial program, the remedial party can also terminate the agreement in accordance with section 375-3.5 of this Part.

375-1.7 Site classification and administrative designations.

(a) The department maintains an electronic database of inactive hazardous waste disposal sites in which sites are classified. Sites for which Registry classification is mandated by ECL 27-1305 are specifically addressed in section 375-2.7(b) of this Part; other inactive hazardous waste disposal sites contained in the database have been assigned administrative classifications applicable to one or more programs.

(1) Classification Code A (Active): The classification assigned to a non-Registry site in the Brownfield Cleanup Program or Environmental Restoration Program while work is underway and not yet completed. This classification may also be used for sites being remediated under a Cooperative Agreement with the USEPA or other federal entity. Certain sites assigned this administrative classification by the department prior to the effective date of this Part that do not fall within the preceding definition may, at the department's discretion, continue to be classified as class A sites.

(2) Classification Code C (Completed): The classification used for sites for which the department has determined that remediation has been satisfactorily completed under a remedial program (i.e., State Superfund, Brownfield Cleanup Program, or Environmental Restoration Program). For Registry sites, all active operation, maintenance, and monitoring requirements, including the creation of institutional controls, must be completed before they will be designated a class C. Non-Registry sites that have been fully remediated under a department remedial program may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the department. Non-Registry sites that meet the criteria set forth in section 375-1.6(c)(6) may be made a class C site and issued a certificate of completion, but may require ongoing active operation,

maintenance, and monitoring, and periodic certification of institutional and engineering controls.

(3) Classification Code *N* (No Further Action at this Time): Sites are given a classification of *N* if:

(i) the site characterization and evaluation of a class *P* site results in a determination that contamination at the site does not warrant placing the site on the Registry;

(ii) a site, including a former brownfield site, was in a non-Registry program, remediation was not completed. The department may classify all or a portion of a class *N* site on the Registry in accordance with the provisions of section 375-2.7;

(iii) a location at which a drum(s) or other discrete waste was formerly present and subsequently removed by the department or others where conditions presently indicate no need for additional work; or

(iv) a site for which an application was submitted to the Brownfield Cleanup Program or Environmental Restoration Program and then withdrawn or terminated prior to the commencement of investigation or remediation.

(4) Classification Code *P* (Potential): Sites are given a classification of *P* if preliminary information provides reason to believe that contaminants at the site may warrant the site's inclusion on the Registry. Additional information and/or investigation will be generated through a site characterization which will determine if a site qualifies for listing on the Registry. While designated a class *P* site, a site is not listed on the Registry and the requirements of this Part relating to notice, citizen participation, and change of use set forth respectively at sections 375-1.5(a), 375-1.10, and 375-1.11(d) of this Subpart are not applicable. If a site with class *P* status is subject to an existing order, agreement, or State assistance contract at the time it is classified as a Registry site or class *A* site, the time limits relating to notice, citizen participation, and change of use set forth respectively at sections 375 1.5(a), 375-1.10, and 375-1.11(d) of this Subpart shall apply effective upon the date the site is listed on the Registry.

(b) The department may add other administrative designation categories, and nothing in this Part should be construed to limit that ability.

375-1.8 Remedial program.

(a) The goals of each remedial program are set forth respectively in sections 375-2.8, 375-3.8 and 375-4.8 of this Part. To achieve the applicable goals, the remedial program may include, but not be limited to, the actions set forth in this section.

(1) A site may be divided into operable units, as defined in section 375-1.2(af) of this Subpart.

(2) Multiple work plans and reports may be approved for a site, as set forth in section 375-1.6 of this Subpart.

(3) All remedial programs shall address bulk storage tanks or containment vessels, source removal and control, and groundwater protection and control measures, as set forth in subdivisions (b) through (d) of this section.

(4) Remedy selection at a site may consider the use of innovative technologies which are demonstrated to be feasible to meet the remediation requirements.

(5) Where the remedial program for a site requires ongoing site management, a site management plan will be developed for the site which will include, as applicable for the remedial program, the following plans:

- (i) institutional and engineering control plan;
- (ii) monitoring plan; and/or
- (iii) operation and maintenance plan.

(6) The remedial program at a site shall analyze the impact of contamination at a site on the following, as applicable:

- (i) soil;
- (ii) groundwater;
- (iii) surface water and sediments;
- (iv) soil vapor;
- (v) ambient air; and
- (vi) ecological resources.

(7) Where an interim remedial measure is proposed at a site, such measure will be conducted pursuant to a department-approved work plan. Such work plan shall require the submission of a final report upon conclusion of the measure.

(8) Reconstruction of habitat disturbed by the remedial program.

(b) Bulk storage tanks and containment vessels.

(1) All known petroleum storage tanks on the site, which are under the ownership or control of the remedial party, shall be registered as set forth in section 612.2 of this Title;

(2) All known chemical storage tanks on the site, which are under the ownership or control of the remedial party, shall be registered as set forth in section 596.2 of this Title;

(3) All such known tanks that are out of service, which are under the ownership or control of the remedial party, shall be closed as set forth in section 613.9 of this Title (in the case of petroleum storage tanks) or section 598.10 of this Title (in the case of chemical storage tanks); and

(4) Where any contaminant is found to be stored on the site in containment vessels other than storage tanks (such as drums, transformers, sumps, and pits), or where petroleum storage tanks or chemical storage tanks are discovered on site during the course of the remedial program and such tanks contain any contaminant, such contaminants shall be removed and disposed of in accordance with all applicable State and Federal requirements within a schedule approved by the department.

(c) Source removal and control measures. The following is the hierarchy of source removal and control measures which are to be used, ranked from most preferable to least preferable:

(1) Removal and/or treatment. All sources, concentrated solid or semi-solid hazardous substances, dense non-aqueous phase liquid, light non-aqueous phase liquid and/or grossly contaminated media shall be removed and/or treated; provided however, if the removal and/or treatment of all such contamination is not feasible, such contamination shall be removed or treated to the greatest extent feasible.

(2) Containment. Any source remaining following removal and/or treatment set forth in this subdivision shall be contained; provided however, if full containment is not feasible, such source shall be contained to the greatest extent feasible.

(3) Elimination of exposure. Exposure to any remaining contamination following removal, treatment and/or containment set forth in this subdivision shall be eliminated through additional measures, including but not limited to, as applicable, the timely and sustained provision of alternative water supplies and the elimination of volatilization into buildings; provided however, if such elimination is not feasible such exposure shall be eliminated to the greatest extent feasible.

(4) Treatment of source at the point of exposure. Abatement of the exposure resulting from a source of environmental contamination at the point of exposure, as applicable, including but not limited to, wellhead treatment or the management of volatile contamination within buildings, shall be considered as a measure of last resort.

(d) Groundwater protection and control measures.

(1) On-site source of groundwater contamination. All remedial programs shall consider the protection of groundwater and will consider department guidance including, but not limited to, any groundwater remediation strategy issued as set forth in ECL 15-3109. The following are the measures to be considered:

(i) source removal or control as set forth in subdivision (c) of this section.

(ii) groundwater quality restoration. Restoration of groundwater shall be evaluated to determine the feasibility of measures to restore groundwater quality to meet applicable standards and guidance.

(iii) plume containment/stabilization. All remedies shall, to the extent feasible, prevent the further migration of groundwater plumes, whether on-site or off-site. However, a volunteer in the Brownfield Cleanup Program shall address, to the extent feasible, the on-site plume and prevent the further migration of any site-related plume off-site at the site boundary. The development of alternatives will include an evaluation of feasible remedial alternatives that can achieve groundwater plume containment/stabilization.

(2) Off-site source of groundwater contamination with no on-site source (or contribution).

(i) On-site groundwater contamination may be attributed to an off-site source if the department determines that:

- (a) no act of the remedial party has contributed to the upgradient contamination, or caused such contamination to become worse;
- (b) there is an off-site source of contamination, located on one or more upgradient locations, that has impacted on-site groundwater as a result of the migration of the contaminant in, or on, the groundwater; and
- (c) there is not an on-site source(s) that may be causing or contributing more than inconsequential amounts to the groundwater contamination.

(ii) Where the department has determined that the criteria in this paragraph have been satisfied, the remedial party shall:

- (a) have no remedial responsibilities with respect to such groundwater contamination migrating under the site if there are no on-site public health exposures;
- (b) continue to satisfy the conditions in subparagraph (2)(i) of this subdivision; and
- (c) include in the remedy actions which eliminate or mitigate on-site public health exposures, to the extent feasible, resulting from any off-site contamination entering the site.

(3) Off-site source of groundwater contamination with an on-site source (or contribution):

(i) on-site groundwater contamination may be attributed to both an on-site and an off-site source, if the department determines that:

- (a) there is an off-site source of contamination, located at one or more upgradient locations, that has impacted on-site groundwater as a result of the migration of the contaminant in, or on, the groundwater; and
- (b) there is an on-site source(s) that may be contributing to the groundwater contamination; and

(ii) where the department has determined that the criteria in subparagraph (3)(i) of this paragraph exist, the remedial party shall:

- (a) identify a remedy for the site which includes removal, containment or treatment of the on-site sources contributing to the groundwater contamination; and
- (b) include in the remedy actions which eliminate or mitigate on-site environmental or public health exposures, to the extent feasible, resulting from any off-site contamination entering the site.

(4) Groundwater protection decision-making shall consider the following factors set forth at ECL 15-3109 and any groundwater strategy issued pursuant thereto:

(i) recognition that both short- and long-term remediation strategies may be necessary to address groundwater contamination;

(ii) identification of the long-term groundwater remedial activities that are required to be taken by the State pursuant to this Part for sites which the department has determined pose a significant threat as set forth in section 375-2.7 of this Part; and

(iii) establishment of criteria for the prioritization of long-term groundwater remediation activities to be performed by the department. Such criteria shall include, but not be limited to:

(a) the current or reasonably anticipated future use of contaminated groundwater as drinking water,

(b) the current or reasonably anticipated future use of a groundwater aquifer into which contaminated groundwater is flowing as drinking water;

(c) the current or reasonably anticipated future use of contaminated groundwater for non-potable purposes including, but not limited to, recreational uses, institutional uses and agricultural or non-agricultural irrigation;

(d) community needs;

(e) feasibility of remediation; and

(f) protection of natural resources and minimizing the impairment of the resource; and

(iv) notwithstanding clauses (iii)(a) through (f) of this paragraph, while the current use of groundwater as drinking water may be considered, the absence of such use shall not exclude the need for remediation.

(e) Scope of the investigation.

(1) The goals of a remedial investigation include, but are not limited, to the:

(i) delineation of the areal and vertical extent of the contamination at, and emanating from all media at the site and the nature of that contamination;

(ii) characterization of the surface and subsurface characteristics of the site, including topography, surface drainage, ecological resources, stratigraphy, depth to groundwater, and any aquifers that have been impacted or have the potential to be impacted;

(iii) identification of the sources of contamination, the migration pathways and actual or potential receptors of contaminants;

(iv) evaluation of actual and potential threats to public health and the environment; and

(v) production of data of sufficient quantity and quality to support the necessity for, and the proposed extent of, remediation and to support the evaluation of proposed alternatives.

(2) Such investigation shall emphasize data collection, sampling and monitoring, as necessary, and includes but is not limited to:

(i) characterization of site geologic and hydrogeologic conditions, including groundwater flow, contaminant movement, and the response of the groundwater system to potential groundwater remedial alternatives;

(ii) assessment of the existing and potential impact of groundwater contamination on private or community water supply wells, surface water quality, air quality, and indoor air quality;

(iii) sampling and analysis necessary to gather sufficient information to evaluate human and environmental exposure pathways, as well as any actual or potential adverse effects due to site contamination; and

(iv) delineation of the nature and extent of contamination sufficient to determine the necessity for, and the proposed extent of remediation, in order to support the development and evaluation of proposed alternatives in the remedy selection process.

(3) Historical data may be submitted in lieu of collecting new data or to supplement new data provided the appropriate quality assurance requirements are met and the data was collected in a manner consistent with appropriate sampling protocols. All information relevant to the ongoing work must be referenced in the reports including sampling protocols.

(f) Remedy selection. A remedy shall be selected upon consideration of these nine factors:

(1) Overall protectiveness of the public health and the environment.

(2) Standards, criteria and guidance. The remedy will:

(i) conform to standards and criteria that are generally applicable, consistently applied, and officially promulgated, that are either directly applicable, or that are not directly applicable but are relevant and appropriate, unless good cause exists why conformity should be dispensed with. Good cause exists if any of the following is present:

(a) the proposed action is only part of a complete program or project that will conform to such standard or criterion upon completion;

(b) conformity to such standard or criterion will result in greater risk to the public health or to the environment than alternatives;

(c) conformity to such standard or criterion is technically impracticable from an engineering perspective; or

(d) the program or project will attain a level of performance that is equivalent to that required by the standard or criterion through the use of another method or approach; and

(ii) consider applicable department guidance.

(3) Long-term effectiveness and permanence. A program or project that achieves a complete and permanent cleanup of the site is preferred over a program or project that does not do so.

(4) Reduction in toxicity, mobility or volume of contamination through treatment: a program or project that permanently and significantly reduces the toxicity, mobility or volume of contamination is to be preferred over a program or project that does not do so. The following is the hierarchy of technologies ranked from the most preferable to the least preferable:

- (i) destruction, on-site or off-site;
- (ii) separation or treatment, on-site or off-site;
- (iii) solidification or chemical fixation, on-site or off-site; or
- (iv) control and isolation, on-site or off-site.

(5) Short-term impacts and effectiveness.

(6) Implementability.

(7) Cost-effectiveness, including capital costs and annual site maintenance and monitoring plan costs.

(8) Community acceptance.

(9) Land use, provided the department determines that there is reasonable certainty associated with such use. In assessing reasonable certainty, the department shall consider:

(i) the current, intended, and reasonably anticipated future land uses of the site and its surroundings in the selection of the remedy for soil remediation under the brownfield cleanup and environmental restoration programs, and may consider land use for sites in the inactive hazardous waste disposal site remedial program, where cleanup to pre-disposal conditions is determined not feasible;

(ii) the department's determination on the use of the site will be in accordance with subdivision 375-1.8(g) of this section; and

(iii) the reasonably anticipated future use of the site and its surroundings, which shall be documented in the analysis of alternatives, taking into consideration factors including, but not limited to, the following:

- (a) current use and historical and/or recent development patterns;
- (b) applicable zoning laws and maps;
- (c) brownfield opportunity areas as designated set forth in GML 970-r;
- (d) applicable comprehensive community master plans, local waterfront revitalization plans as provided for in EL article 42, or any other applicable land use plan formally adopted by a municipality;
- (e) proximity to real property currently used for residential use, and to urban, commercial, industrial, agricultural, and recreational areas;
- (f) any written and oral comments submitted by members of the public on the proposed use as part of the activities performed pursuant to the citizen participation plan;

- (g) environmental justice concerns, which for purposes of this Subpart, include the extent to which the proposed use may reasonably be expected to cause or increase a disproportionate burden on the community in which the site is located, including low-income minority communities, or to result in a disproportionate concentration of commercial or industrial uses in what has historically been a mixed use or residential community;
- (h) Federal or State land use designations;
- (i) population growth patterns and projections;
- (j) accessibility to existing infrastructure;
- (k) proximity of the site to important cultural resources, including Federal or State historic or heritage sites or Native American religious sites;
- (l) natural resources and potential recovery following restoration, including proximity of the site to important Federal, State or local natural resources, including waterways, aquatic connectivity, wildlife movement corridors, wildlife refuges, wetlands, or critical habitats of endangered or threatened species;
- (m) potential vulnerability of groundwater to contamination that might emanate from the site, including proximity to wellhead protection and groundwater recharge areas and other areas identified by the department and the State's comprehensive groundwater remediation and protection program established in ECL article 15, title 31;
- (n) proximity to flood plains, potential for sea level rise and increasing flood frequency and magnitude;
- (o) geography and geology; and
- (p) current institutional controls applicable to the site.

(g) Use of a site. The use of a site, or portion of a site, shall be for either unrestricted or restricted use.

(1) Such uses fall into one of the following categories:

(i) *Unrestricted use* which is a use without imposed restrictions, such as environmental easements or other land use controls; or

(ii) *Restricted use* which is a use with imposed restrictions, such as environmental easements, which as part of the remedy selected for the site require a site management plan which relies on institutional controls or engineering controls to manage exposure to contamination remaining at a site.

(2) Restricted uses include:

(i) *Residential use* which is the land use category which allows a site to be used for any use other than raising livestock or producing animal products for human consumption. Restrictions on the use of groundwater are allowed, but no other institutional or engineering controls are allowed relative to the residential

use soil cleanup objectives, except as set forth in section 375-2.8(f) of this Part. This is the land use category which will be considered for single family housing;

(ii) *Restricted-residential use* which is the land use category which shall only be considered when there is common ownership or a single owner/managing entity of the site. Restricted-residential use:

- (a) shall, at a minimum, include restrictions which prohibit
- (1) any vegetable gardens on a site, however, raised planters (using clean, imported soil) and roof-top gardens would not be subject to this prohibition. Community gardens may be considered with department approval; and
 - (2) single family housing unless the land beneath the structures on the site remains commonly owned in perpetuity; and

(b) includes active recreational uses, which are public uses with a reasonable potential for soil contact;

(iii) *Commercial use* which is the land use category which shall only be considered for the primary purpose of buying, selling or trading of merchandise or services and the production of agricultural products grown indoors and not in contact with onsite soils. Commercial use includes passive recreational uses, which are public uses with limited potential for soil contact; and

(iv) *Industrial use* which is the land use category which shall only be considered for the primary purpose of manufacturing, production, fabrication or assembly processes and ancillary services. Industrial use does not include any recreational component.

(3) The department may approve a remedial program which meets unrestricted use or a range of restricted uses. The following hierarchy represents the range from a less restrictive to a more restrictive land use:

- (i) residential;
- (ii) restricted-residential;
- (iii) commercial; and
- (iv) industrial.

(4) The department's determination of the allowable use of a site as part of a remedial program:

- (i) is not a determination by the department relative to a specific future use;
- (ii) is the least restrictive use of the site, as set forth in paragraph (3) of this subdivision, allowed by such remedial program and would allow all more restrictive uses to occur on the site (e.g., a site cleanup to a commercial use would also be protective of industrial use); and
- (iii) may disregard the remedial party's proposed use and approve a remedy upon a use which is consistent with existing zoning laws or maps.

(5) Where the use of the site proposed for a remedial program does not conform with applicable zoning laws or maps or the reasonably anticipated future use of the site as determined by the department, the department shall not approve a remedy based on such non-conforming use (e.g., the department cannot approve a cleanup to commercial uses for a property which is solely zoned residential), unless it:

(i) is based on a cleanup level that would require a less restrictive use of the site than would be allowed based upon current zoning laws or maps (e.g., the department may approve a cleanup to residential levels for a property which is zoned for commercial use); or

(ii) can be shown to the department's satisfaction that zoning changes are or will be sought, in which event the department will conditionally approve the remedy but will not issue a certificate of completion until such use is consistent with existing zoning laws or maps.

(6) For purposes of determining the appropriate land use category, the department will consider the nature of the uses and the activities which are occurring, or may occur, at the site:

(i) on the surrounding land;

(ii) in the subsurface to a depth of 15 feet below the surface of the site;

and

(iii) when the ground floor use will differ from the upper floor use, the less restrictive use (e.g. residential rather than commercial) shall apply, unless otherwise approved by the department.

(h) Institutional controls, engineering controls and environmental easements.

(1) Institutional and engineering controls. A remedy that includes institutional controls and/or engineering controls must include the following:

(i) a complete description of any use restrictions and/or institutional controls, their role in achieving the remedial objectives of the remedy and the mechanisms that will be used to implement, maintain, monitor, and enforce such restrictions and controls;

(ii) a complete description of any engineering controls and any site management plan requirements, including the mechanisms that will be used to continually implement, maintain, monitor, and enforce such controls and requirements;

(iii) an evaluation of the reliability and viability of the long-term implementation, maintenance, monitoring, and enforcement of any proposed institutional or engineering controls and analysis of the costs of implementing, maintaining, monitoring and enforcing such controls, including costs that may be borne by state or local governments. To accomplish this:

(a) the remedial party must submit to the department a detailed written estimate of the long-term cost, in current dollars, for implementing the institutional or engineering controls. The cost estimate must be based on the cost of implementing the

institutional or engineering controls as set forth in the remedial work plan; and

(b) the cost estimate for implementing the institutional/engineering controls must reflect consideration of the size, type, and location of the area subject to the institutional or engineering controls; the remedy and the nature and extent of contamination subject to the institutional/engineering controls;

(iv) an analysis sufficient to support a conclusion that effective implementation, maintenance, monitoring and enforcement of institutional and/or engineering controls can be reasonably expected;

(v) where required by the department, financial assurance, in accordance with section 375-1.11(c) of this Subpart, to ensure the long-term implementation, maintenance, monitoring, and enforcement of any such controls; and

(vi) any engineering control must be used in conjunction with institutional controls to ensure the continued integrity of such engineering control.

(2) Environmental easements.

(i) Any institutional controls, engineering controls, use restrictions and/or any site management requirements applicable to the remedial site will be contained in an environmental easement, which shall be:

(a) created and recorded pursuant to ECL article 71, title 36;

(b) in a form and manner as prescribed by the commissioner;

(c) in compliance with GOL 5-703(1) and ECL 71-3605(2); and

(d) recordable pursuant to RPL 291.

(ii) Agents, employees or other representatives of the State may enter and inspect the property burdened by an environmental easement with reasonable prior notice to the property owner, to assure compliance with the restrictions identified by the environmental easement.

(iii) An environmental easement will not be required where the only restriction to be placed on a site is a prohibition on the use of groundwater and the local municipality has a groundwater use prohibition in statute or ordinance.

(3) Institutional control/engineering control certification.

(i) The owner or the remedial party at a site at which institutional or engineering controls are employed as part of a remedy, must annually submit, unless an alternate certification period is provided in writing by the department, a written certification:

(a) by a professional engineer, or by such other qualified environmental professional as the department may find acceptable as set forth in ECL 27-1415(b); or

(b) where the only control is an institutional control on the use of the property, the certification may be made by the property owner.

(ii) The certification shall be included in a report summarizing the site management effort for the certification period, in such form and manner as the department may require, and shall certify that:

(a) the inspection of the site to confirm the effectiveness of the institutional and engineering controls required by the remedial program was performed under the direction of the individual identified in subparagraph (3)(i) of this paragraph;

(b) the institutional controls and/or engineering controls employed at such site:

(1) are in-place;

(2) are in the department-approved format; and

(3) that nothing has occurred that would impair the ability of such control to protect the public health and environment;

(c) the owner will continue to allow access to such real property to evaluate the continued maintenance, monitoring, and operation of such controls;

(d) nothing has occurred that would constitute a violation or failure to comply with any site management plan for such controls;

(e) the report and all attachments were prepared under the direction of, and reviewed by, the party making the certification;

(f) to the best of their knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and

(g) the information presented is accurate and complete.

(iii) Only one such certification shall be filed per site. If a site is comprised of multiple properties or parcels, the remedial party shall arrange to file one consolidated certification.

(iv) In the event that the certification cannot be provided due to a failure of one or more of the institutional or engineering controls, the department will be provided:

(a) timely notification explaining the cause for such failure;

(b) a work plan to implement the corrective measures necessary in order to be able to provide the certification; and

(c) a schedule for those corrective measures.

(v) In addition to the periodic reporting requirement, the remedial party shall timely notify the department of failures of one or more of the institutional or engineering controls and shall provide a work plan to remedy the failure of the institutional or engineering control.

(vi) The work plan referenced in subparagraphs (iv) and (v) of this paragraph will be reviewed by the department as set forth in section 375-1.6(d) of this Subpart and the corrective measures shall be implemented in accordance

with the approved work plan. A certification, meeting the requirements of subparagraph (ii) of this paragraph, shall be submitted upon completion of the corrective measures.

375-1.9 Certificate of completion.

(a) A certificate shall be issued for the real property constituting the site, upon a determination that the final engineering report is approved. The date of the approval of the final engineering report by the department, as set forth in section 375-1.6(c)(6) of this Subpart, shall be the same as the issuance date for the certificate of completion.

(b) The department shall issue the certificate of completion to the remedial party which has signed the order, agreement or State assistance contract.

(c) A certificate of completion shall include all of the following:

(1) an acknowledgment that the requirements of the remedial program were satisfied or are expected to be satisfied in accordance with the time-frames contained in the approved remedial program;

(2) a description of the site by adequate legal description, which at a minimum includes metes and bounds;

(3) a prohibition against the use of the site in a manner inconsistent with any land use limitation imposed as a result of such remediation efforts without additional appropriate remedial activities;

(4) a statement that the department's issuance of the certificate of completion entitles the remedial party to certain liability benefits as set forth in sections 375-2.9, 375-3.9 and 375-4.9 of this Part; and

(5) a description of any engineering and institutional controls or site management activities required by the approved work plan and notification that failure to manage the controls or complete site management activities in compliance with the terms of the remedial program and the environmental easement for the site, may result in revocation of the certificate of completion.

(d) Recording of the certificate of completion.

(1) A notice of the certificate of completion must be recorded in the recording office for the county (or counties) where any portion of the site is located within 30 days of its issuance.

(2) Pursuant to RPL 317, the notice of the certificate of completion is deemed recorded when it is delivered to the recording officer.

(3) Proof of such recording shall be submitted to the department within 30 days after recording, or 30 days after the remedial party's receipt of such proof of filing from the county clerk, whichever is later.

(e) Modification or revocation of a certificate of completion.

(1) A certificate of completion may be modified or revoked by the department upon a finding that:

(i) the remedial party has failed to manage the controls or monitoring in full compliance with the terms of the remedial program, as set forth in paragraph 375-1.9(c)(5) of this section;

(ii) there has been a failure to comply with the terms and conditions of any order, agreement or State assistance contract executed by the department;

(iii) there was a misrepresentation of a material fact tending to demonstrate that the:

(a) cleanup levels were reached; and/or

(b) applicant qualified as a volunteer in the brownfield cleanup program;

(iv) there was a misrepresentation of material fact tending to demonstrate that the applicant or the site met the criteria set forth in subdivision one-a of section 27-1407 of the environmental conservation law for the purpose of receiving the tangible property credit component of the brownfield redevelopment tax credit, and/or elements thereof of the brownfield redevelopment tax credit pursuant to section 21(a)(3) of the tax law;

(v) the terms and conditions of the environmental easement have been intentionally violated; or

(vi) for good cause.

(2) If the department seeks to modify or vacate a certificate of completion, it shall:

(i) provide notice to the certificate holder which shall specify the basis for the department's proposed action and facts in support of that action; and

(ii) mail notices by certified mail.

(3) The certificate holder may seek relief from the notice as set forth in sections 375-2.9, 375-3.9 and 375-4.9 of this Part.

(f) Transfer of a certificate of completion. A certificate of completion may be transferred, by the applicant or subsequent holder of the certificate of completion, to a successor to a real property interest, including legal title, equitable title or leasehold, in all or part of the site.

(1) The department shall be provided:

(i) advance notice as set forth in section 375-1.11(d) of this Subpart; and

(ii) within 30 days of the transfer, a notice of transfer, on a department-approved form, shall be filed in accordance with the filing requirements of the original certificate set forth in subdivision (d) of this section.

(2) Upon filing of the notice, the certificate of completion shall be deemed issued to the successor or assign.

(3) A certificate of completion shall not be transferred to a responsible party.

(g) Any party to whom a certificate of completion is transferred shall be responsible for the operation and maintenance of any required engineering controls and compliance with all required institutional controls, in accordance with the approved site management plan and environmental easement.

375-1.10 Citizen participation.

(a) To facilitate the remedial process and enable citizens to participate more fully in decisions that affect their health, the department will require the provision of opportunities for citizen involvement and will encourage consultation with the public early in that process before the department forms or adopts final positions. The primary goals of the citizen participation program at sites are to facilitate two-way communication between the department and individuals, groups, and organizations that have expressed interest in or are affected by the site or the site's program, in the decision-making process associated with the remediation of sites. The department will require that opportunities for public involvement be included in the development and implementation of a remedy.

(b) All remedial programs shall include citizen participation activities which, at a minimum, shall include, but are not limited to, the preparation of a citizen participation plan, establishment of a document repository, which may be electronic in form, and public notice with a prescribed comment period at select milestones. Program specific requirements for these and other citizen participation activities are set forth under each of the Subparts of this Part.

(c) The design of any citizen participation plan, including the level of citizen involvement and the tools utilized, shall take into account the scope and scale of the proposed remedial program, local interest and history, and other relevant factors. While retaining flexibility, citizen participation plans shall embody the following principles of meaningful citizen participation:

(1) opportunities for citizen involvement should be provided as early as possible in the decision-making process prior to the selection of a preferred course of action by the department and/or the remedial party;

(2) activities proposed in such plan should be as reflective of the diversity of interests and perspective found within the community as possible, allowing the public the opportunity to have their views heard and considered, which may include opportunities for dialogue; and

(3) full, timely, and accessible disclosure and sharing of information by the department shall be provided, including the provision of technical data and the assumptions upon which any analyses are based.

(d) Within 20 days of the effective date of the order, agreement or State assistance contract, the remedial party shall submit a citizen participation plan which shall include the following minimum elements:

(1) a site contact list;

(2) the name and address of a document repository and proof of acceptance of this designation by the repository;

(3) overview of the site's history and contamination issues;

(4) identification of major issues of public concern related to the site and a description of any mitigation planned to address the issues, if appropriate;

(5) a description and schedule of the major elements of the site's remedial program;

(6) a description and schedule of citizen participation activities conducted or planned relative to the site; and

(7) a description and schedule of any additional citizen participation activities needed to address public concerns.

(e) All citizen participation plans and fact sheets required by the department will be subject to department review and approval. The citizen participation plan will be updated during the implementation of the remedial program.

(f) Document repository. A document repository shall be established at a location accessible to citizens where they can review the remedial program documents.

(1) Documents shall be placed in the repository, which are:

(i) approved by the department as set forth in section 375-1.6(d) of this Subpart; or

(ii) otherwise designated by the department for inclusion.

(2) The remedial party shall ensure that all appropriate documents are in the repository.

(3) The department may allow an internet repository to be used to satisfy this requirement.

(g) Comment period extensions.

(1) The department shall consider a request to extend a comment period provided such request is received within five days prior to the identified end of the comment period.

(2) The time allotted for extensions shall not be greater than 30 days.

(3) Additional notice is not required upon granting an extension.

(h) Interim remedial measures (IRMs). For IRMs, the department will not require citizen participation activities unless the scope of the IRM is likely to represent a significant portion of the remedy, in which event the department will require a 30-day comment period.

375-1.11 Miscellaneous.

(a) Submissions to the department. All work plans, reports, including all attachments and appendices, and certifications, submitted by a remedial party shall be submitted in print, as well as in an electronic format acceptable to the department.

(b) Prohibitions.

(1) It is a violation to obstruct or attempt to obstruct any duly designated officer or employee of the department or of any other State agency, or any agent, consultant, contractor or other person, including an employee, agent, consultant or contractor of a remedial party acting at the direction of the department, or so authorized in writing by the department, acting as set forth in ECL article 27 or ECL article 56, title 5 or any combination of same.

(2) It is a violation to engage in any activity that will, or that is reasonably:

(i) anticipated to, prevent or interfere significantly with any proposed, ongoing, or completed remedial program at any site; or

(ii) foreseeable to, expose the public health or the environment to a significantly increased threat of harm or damage at any site.

(c) Financial assurance.

(1) Applicability. The department may require, as a condition of accepting an institutional or engineering controls, that the remedial party post financial assurance to ensure the long-term implementation, maintenance, monitoring, and enforcement of any such controls. In considering whether to require financial assurances, the department will consider factors including, but not limited to:

(i) whether one or more innovative technologies have been employed at the site;

(ii) the length of time to implement the remedial program;

(iii) the cost of the remedial program;

(iv) the complexity of the remedial program; and

(v) the financial viability of the remedial party.

(2) Financial assurance required under this Part shall be in effect and on file with the department before any certificate of completion is issued. Allowable financial assurance mechanisms include:

(i) trust funds;

(ii) surety bond guaranteeing payments;

(iii) letters of credit;

(iv) insurance; or

(v) other financial assurance mechanisms approved by the department.

(3) Preparation of estimated amount of financial assurance. If the department requires posting of financial assurance as a condition of accepting institutional or engineering controls, the remedial party shall provide an estimated amount of financial assurance for the department's consideration. Such party is responsible for having a professional engineer or other qualified individual prepare the estimate, and in the event the financial assurance is being provided through environmental insurance, an independent insurance professional shall provide a certification that such policy will meet the requirements of this section. The estimate must include an itemized listing of each cost and how the cost was calculated, including the cost of contracting with a third party.

(4) Department review of estimated amount of financial assurance. Upon receipt of the financial assurance estimate, the department shall review the estimate and shall assess the basis for the type and extent of impacts used in calculations, and whether the estimated amount is sufficient. The department may accept, modify, or reject the financial assurance estimate.

(5) Submittal of financial assurance. After approval of the financial assurance amount and prior to the department's issuance of a certificate of completion, the remedial party must submit a signed financial assurance mechanism to the department. The mechanism must be in effect when submitted, and such mechanism may be submitted in hard copy or electronically. A remedial party may satisfy this requirement

by establishing one or more financial assurance mechanisms. If multiple financial assurances are used, the remedial party shall specify at least one such assurance as *primary* coverage and shall specify the other assurance as *excess*. Additionally, a remedial party with obligations for providing financial assurances for multiple sites can combine the required financial assurances for all sites into one or more financial assurance mechanisms.

(6) Adjustment of amount of financial assurance. The dollar amount of financial assurance shall be reviewed at least once every five years. During the review, the department may adjust the amount for inflation based on the United States consumer price index. In addition, the remedial party may request that the amount of financial assurance be adjusted based on factors occurring since the posting of the existing financial assurance. The remedial party shall describe in writing the basis for the adjustment request.

(7) Release of financial assurance. The department may release the requirement for financial assurance or a portion of the requirement for financial assurance, and, in doing so, shall;

- (i) notify the remedial party in writing of any release or modification;
- (ii) modify the financial assurance requirement to reflect the release or modification of the financial assurance required; and
- (iii) return to the remedial party such released financial assurance, if applicable, with the notice.

(8) Substitution of financial assurance. If the remedial party requests substitution of one type of financial assurance for another, such party shall submit to the department a proposal for alternate financial assurance. The alternate financial assurance must be as secure or more secure than the existing financial assurance as determined by the department. Upon approval and receipt of the alternate financial assurance by the department, the department shall release the existing financial assurance, and the department shall notify the remedial party in writing.

(d) Change of use.

(1) At least 60 days before a change of use at a site, the person proposing to make such change of use shall provide written notification to the department.

(2) The notice shall include a work plan to be approved by the department or identify the approved work plan or portion of the approved site management plan that covers this activity. If the change of use does not involve any physical alteration of the site, then the department may waive the requirement for a work plan. The notice shall advise the department of the contemplated change, including, but not limited to, explaining how such change may affect the site's proposed, ongoing, or completed remedial program.

(3) Where such activity occurs after the Certificate of Completion is issued and is identified as work that is outlined in the Site Management Plan, a Change of Use notice is not required if the person complies with the notification requirements of the Site Management Plan.

(4) Where such change results in a change in ownership or responsibility for the proposed, ongoing, or completed remedial program:

(i) such notice shall certify that the prospective purchaser has been provided a copy of any order, agreement or State assistance contract as well as a copy of all approved remedial work plans and reports; and

(ii) within 30 days of the transfer of all or part of the site, an additional notice shall be submitted to the department which includes but is not limited to the name of the new owner and the new owner's contact information, including a contact representative and the contact information for such representative.

(e) Effective date of submissions and notices.

(1) Unless otherwise provided, the effective date of submissions and notices required under this Part shall be the date of receipt as defined herein.

(2) The date of receipt of any writing or notice by the department to the remedial party shall be:

(i) if served in person, the date delivered to the remedial party or its designated representative;

(ii) if mailed, five days after the mailing; or

(iii) if electronically distributed, the next business day; or

(iv) if mailed via overnight delivery service, the date delivered to the remedial party or delivered to the department's office.

(3) The date of receipt of any submission to the department by the remedial party shall be:

(i) if served in person, the date delivered to the department's office at 625 Broadway, Albany, New York or to the appropriate regional office of the department;

(ii) if mailed, five days after the mailing; or

(iii) if electronically distributed, the next business day; or

(iv) if mailed via overnight delivery service, the date delivered to the remedial party or delivered to the department's office.

(f) Remedial activities which were approved by the department prior to the effective date of this rule shall be completed in a manner consistent with such approval.

375-1.12 Permits.

(a) When the department develops and implements a remedial program set forth in ECL 27-1313(1); ECL 27-1313(5); ECL 27-1411(5); or ECL 56-0509(4), the department shall be exempt from the requirement to obtain any department-issued permits, and the department has the discretion to extend this exemption to other State and local permits, if:

(1) the activity is needed for investigation and/or remediation of contamination on or emanating from a site which the department is managing as part of the site remedial program;

(2) all substantive technical requirements applicable to like activity conducted, as set forth in a permit, are complied with, as determined by the department; and

(3) the activity is a component of a program selected by a process complying with the citizen participation requirements of section 375 1.10 of this Subpart, to the extent applicable.

(b) The department may exempt a remedial party from the requirement to obtain any department issued permits for sites if:

(1) the activity is conducted on the site or on premises that are under common control or are contiguous to or physically connected with the site and the activity manages exclusively contamination which the remedial party is handling as part of the site remedial program;

(2) all substantive technical requirements applicable to like activity conducted pursuant to a permit are complied with, as determined by the department; and

(3) the activity is a component of a program selected by a process complying with the citizen participation requirements of section 375 1.10 of this Subpart, to the extent applicable.

(c) The department will require a remedial party obtain applicable State and local permits which are not issued by the department unless there is a demonstration that obtaining such State or local permit will substantially delay the project or present a hardship, then the department may exempt the party from the need to obtain such State or local permits provided:

(1) the remedial program or activity is conducted on the site or on premises that are under common control or are contiguous to or physically connected with the site and the activity manages exclusively contamination which the department or remedial party is handling as part of the site remedial program;

(2) all substantive technical requirements applicable to like activity conducted pursuant to a permit are complied with, as determined by the department; and

(3) the activity is a component of a program selected by a process complying with the citizen participation requirements of section 375 1.10 of this Subpart, to the extent applicable.

(d) Where a permit exemption is applicable or granted, as set forth in this section, the department may require a remedial party follow the department application process even if no formal permit would be issued.

(e) If, in the course of implementing a remedial program, any storage tank(s) subject to regulation under Parts 596 through 599 or Part 613 of this Title, are discovered and found not to be registered or not being operated in accordance with the applicable regulatory requirements, such tank(s) shall be registered and either closed in accordance with regulatory requirements or brought into compliance with the applicable regulatory requirements. These requirements:

(1) apply in full to the remedial program at a site when a responsible party or a participant as defined in section 375-3.2(c)(1) of this Part, implements a remedial program pursuant to ECL 27-1313(1); ECL 27-1313(5); or ECL 27-1411(5); or

(2) apply in full except that payment of a registration fee shall not be required where the department funds all or part of a remedial program pursuant to ECL 27-1313(1); ECL 27-1313(5); or ECL 56-0503, or a volunteer as defined in section 375-3.2(c)(2) of this Part undertakes the remedial program, provided the tank(s) is to be closed as part of the remedial program for the site.

(f) If, in the course of implementing a remedial program, disturbance to habitat occurs that is subject to regulation pursuant to Part 182, Part 608, Part 661, and Part 663 of this Title and/or constitutes an important component of the environment as defined in subpart 375-6.6, the remedial program shall include a reconstruction plan:

(1) specifying the action needed to replace the habitat with the goal of in-kind replacement of habitat structure and function as determined by the department;

(2) implementing reconstruction within a year of remedial disturbance or as determined by the department; and

(3) specifying the monitoring and maintenance actions needed to re-establish disturbed habitat following the remedial action for a period of 5 years or period of time determined by the department.

(g) All required Federal permits must be obtained.

Subpart 375-2 Inactive Hazardous Waste Disposal Site Remedial Program.

375-2.1 Purpose; applicability.

375-2.2 Definitions.

375-2.3 Municipal eligibility for State assistance.

375-2.4 Applications for municipal assistance.

375-2.5 Orders and State assistance contracts.

375-2.6 Reserved.

375-2.7 Significant threat and Registry determinations.

375-2.8 Remedial program.

375-2.9 Certificate of completion.

375-2.10 Citizen participation.

375-2.11 Miscellaneous.

375-2.12 Reserved.

375-2.1 Purpose; applicability.

(a) This Subpart applies to the development and implementation of remedial programs at inactive hazardous waste disposal sites pursuant to ECL 27-1301, et seq. This Subpart addresses requirements in addition to those requirements identified in Subpart 375-1 of this Part.

375-2.2 Definitions.

As used in this Subpart, the following terms have the following meanings:

(a) *Contaminant* means hazardous waste as defined in section 375-1.2(x) of this Part, excluding petroleum as defined in section 375-1.2(ah) of this Part.

(b) *Contaminated* or *contamination* means the presence of a contaminant, as defined in subdivision (a) of this section, in any environmental media, including soil, surface water, sediment, groundwater, soil vapor, ambient air or indoor air.

(c) *Disposal* means the abandonment, discharge, deposit, injection, dumping, spilling, leaking or placing of contaminants so that such contaminant, or any related constituent thereof, may enter the environment. Disposal also means the thermal destruction of a contaminant and the burning of a contaminant as fuel for the purpose of recovering usable energy.

(d) *Environmental damage* means any injury to the environment, any impairment of its use by flora or fauna and any adverse public health impact.

(e) *Feasibility study* means a study undertaken to develop and evaluate alternatives for remediation, emphasizing data analysis. The remedial investigation data are used to define the objectives of the site remedial program, to develop remedial action alternatives, and to undertake an initial screening and detailed analysis of the alternatives. The term also refers to a report that describes the results of the study.

(f) *Municipality* means a city, county, town, village, public benefit corporation or school district or an improvement district within a city, county, town, or village, or Indian tribe residing within the State, or any combination thereof.

(g) *Release* means any pumping, pouring, emitting, emptying, or leaching, directly or indirectly, of a substance so that the substance or any related constituent thereof, or any degradation product of such a substance or of a related constituent thereof, may enter the environment, or the disposal of any substance.

(h) For the purposes of this Subpart, the terms *non-aqueous phase liquid* or *NAPL*, *disposal*, *emergency*, *engineering control*, *grossly contaminated media*, *off-site contamination*, *on-site contamination*, *operable unit*, *presumptive remedy*, *remedial investigation*, *remedial program*, *responsible party*, and *source area* found in section 375-1.2 of this Part shall have substituted in their definition the terms *contaminant*, *contamination* and *contaminated* as defined in subdivisions 375-2.2(a) and (b) of this section.

375-2.3 Municipal eligibility for State assistance.

(a) The commissioner may provide State assistance to a municipality under ECL 27-1313(5)(g), up to 75 percent of eligible costs as determined by subdivisions (e) and (f) of this section, subject to the conditions and limitations of subdivisions (b), (c) and (d) of this section.

(b) Eligible sites. A site must be a class 1 or class 2 site on the Registry due to disposal of a contaminant.

(c) Eligible municipality. A municipality must meet the following criteria to be eligible:

(1) it must be a responsible party only by reason of being or having been the owner or operator of the site; and

(2) it must enter into an order described in section 375-2.5(a) of this Subpart; or another order acceptable to the department, whereby the municipality is obligated to develop and implement a site remedial program subject to the approval and supervision of the department; and such order must be entered into before submitting an application for State assistance.

(d) Municipal responsibilities. The municipality must:

(1) Take all reasonable steps to obtain indemnification or a commitment to indemnify from any insurance carriers; for purposes hereof, the phrase, *all reasonable steps to obtain indemnification* means:

(i) the diligent conduct of a search to identify all insurers that provided liability coverage for the municipality at any relevant time by reviews of its own records;

(ii) the diligent conduct of negotiations with all identified insurers.

Negotiations have been conducted diligently with a particular insurer when the municipality extend an invitation to negotiate concerning indemnification under its policy, and the insurer:

(a) does not respond to the municipality's invitation;

(b) responds to it by refusing to negotiate;

(c) starts negotiations and thereafter discontinues same;

(d) starts negotiations and refuses to indemnify under the policy within nine months after the start of negotiations; and

(iii) when reasonable, the commencement and diligent prosecution of a civil judicial action to obtain appropriate relief from any identified insurer;

(2) Make all reasonable efforts to secure voluntary agreement by other responsible parties to perform or pay for the performance of the remedial program for the site. For purposes of this section, the phrase *all reasonable efforts to secure voluntary agreement* means:

(i) the diligent conduct of a search to identify responsible parties by a method or methods appropriate to the circumstances of the particular site including, but not limited to, reviews of real property records, regulatory files of appropriate government agencies, publicly available financial information, and private business records obtained under ECL 27-0915; ECL 27-1307; and/or ECL 27-1309; and

(ii) the selection of a person responsible for the site that the municipality determines (and in which determination the department concurs) to be an appropriate party with which to negotiate; and

(iii) diligent conduct of negotiations with that potentially responsible party.

(3) Conduct diligent negotiations with responsible parties. Negotiations have been conducted diligently with that particular responsible party when:

(i) the municipality extends an offer to negotiate an agreement to perform the municipality's obligation under an order, and that party

(a) does not respond to the municipality's offer, or

(b) responds to it by refusing to negotiate, or

(c) starts negotiations and thereafter discontinues same, or

(d) starts negotiations and does not agree to undertake the objective of the negotiations within six months after the commencement of negotiations (or such longer period as the department determines will be promotive of attaining the objective of the negotiations); or

(e) demonstrates to the municipality's satisfaction that it is unable to pay for the objective of the negotiation; and

(ii) the department concurs in the reasonableness of the municipality's actions.

(4) Assist the department and other State agencies in compelling responsible parties to contribute to the cost of the remedial program, such assistance encompassing, at a minimum, the provision of all information which the municipality has or acquires during the course of project implementation, and thereafter, related to the identification of the responsible parties for the contaminants disposed at, or released from, the site.

(5) Cooperate with the State in its cost recovery efforts, including:

(i) the development of evidence or legal argument with respect to:

(a) the equitable allocation of costs to the municipality;

- (b) the liability for, and equitable allocation of costs to, other potentially responsible parties;
- (c) the implementation of the remedial program and the recoverability of particular costs incurred at the site; and
- (d) any other issues likely to substantially affect the State's recovery of costs; and

(ii) negotiation of the settlement (if applicable).

(e) Eligible costs. These costs are eligible for State assistance:

(1) The non-Federal share of the approved site remedial program cost less amounts collected from responsible parties or otherwise as contemplated by ECL article 27, title 13 including reasonable costs for engineering and architectural services, plans and specifications, and consultant and legal services.

(2) The cost of other activities directly incidental to the conduct of an approved site remedial program.

(f) Ineligible costs. The following costs are not eligible for State assistance. Costs incurred:

(1) before the start date identified in the State assistance contract, including those to prepare and submit the State assistance application and those to procure and retain legal, engineering, and other services to undertake the project;

(2) to implement site management at the site after construction of the department-approved remedy;

(3) to redevelop the site that are not necessary to remediate the site;

(4) that are reimbursed by, or recovered from, any other responsible party or insurance carrier or the Federal government;

(5) outside the scope of, or in violation of, the order and/or State assistance contract;

(6) in violation of applicable statutes or regulations; and

(7) for which appropriations are not available.

375-2.4 Applications for municipal assistance.

(a) An application by a municipality to implement a remedial program with State assistance shall be submitted to the department in such form and manner, and containing such information, as the department may require. The signed application, including attachments, shall be submitted electronically.

(b) The scope of the application must be for the full remedial program for the site.

(c) The application shall be signed by the individual authorized to sign the application on behalf of the municipality and include the following certifications:

(1) the applicant has not generated, transported or disposed of, arranged for, or caused the generation, transportation or disposal of any contaminants on that site;

(2) has not undertaken, and will not undertake, any indemnification obligation respecting a party responsible under law for the remediation of the site; and

(3) all statements made for the purpose of obtaining State assistance for the proposed project either are set out in full on this application, or are set out in full in exhibits attached to this application and incorporated by this reference.

375-2.5 Orders and State assistance contracts.

(a) Orders.

(1) The commissioner may order a responsible party to develop and implement a remedial program for a site after providing notice and an opportunity for hearing to the alleged responsible party and determining such person is a responsible party. A hearing required by ECL 27-1313(4) shall be conducted pursuant to the procedures of Part 622 of this Title; provided that anything in said Part 622 of this Title to the contrary notwithstanding, there shall be no third-party, counterclaim, or cross-claim practice.

(2) The commissioner may order a responsible party to develop and implement a remedial program for a site upon the consent of such responsible party without providing notice and an opportunity for hearing.

(3) The order for a remedial program developed as set forth in this subdivision shall include all provisions set forth in section 375-1.5(b) of this Part and also include the following provision:

(i) Indemnification. Unless otherwise approved by the department, a remedial party shall indemnify and hold the State, the trustee of the State's natural resources, and their representatives and employees harmless from any claim, suit, action, and cost of every name and description arising out of or resulting from the fulfillment or attempted fulfillment of the remedial program except for those claims, suits, actions, and costs arising from the gross negligence or willful or intentional misconduct by the State of New York, and/or its representatives and employees during the course of any activities conducted pursuant to the remedial program. The department shall provide written notice no less than 30 days prior to commencing a lawsuit seeking indemnification.

(4) The commissioner may order a responsible party or a potentially responsible party to finance in whole or in part a department or State-led remedial program for a site upon the consent of such responsible party without providing notice and an opportunity for hearing.

(b) State assistance contracts for municipalities.

(1) Upon approval by the department of an application for assistance under section 375-2.3 of this Subpart, the municipality must enter into a State assistance contract with the department. The State assistance contract will be subject to approval by the State Comptroller and, as to form, by the Attorney General, and:

(i) in addition to such further terms and conditions as the department may require in the State assistance contract, the State assistance contract shall be deemed to include, and the municipality shall

comply with, all of the provisions set forth in sections 375-1.5(b)(1) and (4) and 375-4.5(b)(9) of this Part;

(ii) include the terms and conditions set forth in paragraphs (2) through (6) of this subdivision; and

(iii) shall be binding upon the municipality.

(2) The municipality must not enter into, or renew, a lease concerning, nor transfer title to, the site, or any portion of it, until the municipality binds itself and its lessees and its successors in title, to the following:

(i) the site is remediated under department oversight in accordance with the department's record of decision and that the site, or any subdivided parcel within the site, is not used for any purpose until it is so remediated, except that the site may continue to be used for the purpose for which it is being used as of the effective date of the State assistance contract, if the department determines that the existing state of contamination does not pose a risk sufficient to prohibit such use from continuing, giving due regard for public health and environmental protection;

(ii) if, before the department issues the certificate of completion, the municipality, or a successor in title, wishes to transfer title to or subdivide the site into separate parcels, it may do so after it commits in a document, approved by the department in form and substance, to remediate all of the site in accordance with the department's record of decision, within such time period as the department may require;

(iii) the site will not be used for any purpose requiring a level of contamination lower than that serving as the basis for the remediation identified in the record of decision; and

(iv) any engineering and/or institutional controls, that the department may deem necessary to allow the contemplated use of the site to proceed will be imposed, implemented, operated, monitored and maintained in accordance with the department approved site management plan. The municipality:

(a) will develop and submit to the department for its review and approval, a site management plan to ensure that such controls are continually maintained in the manner the department may require; and

(b) are prohibited, as are its lessees and successors in title, from challenging the imposition or continuance of such controls. The failure to implement the approved remedial work plan and site management plan or to maintain such controls shall constitute a violation of the State assistance contract;

(3) If any responsible party payments and/or other responsible party consideration become available to the municipality which were not included when the State share was calculated for the State assistance contract, the municipality shall immediately notify the department of such availability, and the department shall

recalculate the amount of the State share. The department has the option of either reducing the contract amount if the project is ongoing or requesting reimbursement of the amount owed to the State, for deposit in an appropriate account. The State will calculate the amount owed by the municipality based on the recalculated State assistance amount and the amount the State has reimbursed the municipality as of the date the recalculation is made. If the municipality fails to make such repayment within 60 days of notification, the department may take measures provided by statute relating to the recovery of State assistance. The municipality will immediately notify the department in writing of its receipt of reimbursement from other sources for any expenditure for which State assistance may be provided under the State assistance contract.

(4) The department will suspend payments under the State assistance contract until the municipality has cured the failure, if the commissioner determines that the municipality:

(i) has failed to comply with any of the requirements of applicable State or Federal laws and regulations;

(ii) has failed to comply with any of the requirements of the State assistance contract;

(iii) without good cause, as determined by the department, the municipality has failed to initiate, proceed with, or complete the department approved project in accordance with its schedule; or

(iv) has changed the department approved project or any portion thereof without the department's prior written approval.

(5) The department may terminate the State assistance contract if the failure, as set forth in paragraph (4) of this subdivision, is not cured in a reasonable time.

(6) While the municipality may make efforts to recover response costs from potentially responsible parties, it must provide the department with timely advance written notice of any negotiations, proposed agreements, proposed settlements or legal action by which recovery is sought and must not commence such legal action nor enter into any such proposed agreement or settlement without prior written department approval.

(7) For purposes of a State assistance contract, the *cost of an approved project* shall include appraisal, surveying, engineering and architectural services, plans and specifications, consultant and legal services, construction and other direct expenses incident to such project less any Federal or State funds, other than those provided pursuant to this article, for such project received or to be received.

(c) State assistance contract for technical assistance grants.

(1) The State assistance contract for technical assistance grants shall contain such terms and conditions as the commissioner may deem to be appropriate.

(2) The terms and conditions set forth in section 375-1.5(b) of this Part and subdivision 375-2.5(b) of this section will not apply to a State assistance contract for technical assistance grants.

375-2.6 Reserved.

375-2.7 Significant threat and Registry determinations.

(a) Significant threat.

(1) The commissioner may find that contaminants disposed at a site constitute a significant threat to public health or the environment if, after reviewing the available evidence and considering the factors the commissioner deems relevant set forth in this section, the commissioner determines that the contaminants disposed at the site or coming from the site result in, or are reasonably foreseeable to result in, any of the following:

(i) a significant adverse impact upon endangered species, threatened species, or species of special concern, as defined in section 182.2 of this Title;

(ii) a significant adverse impact upon protected streams and navigable waters as defined in section 608.1 of this Title, or tidal wetlands as defined in section 661.4(hh) of this Title, or freshwater wetlands as defined in section 663.2(p) of this Title or significant fish and wildlife habitat areas as defined in section 602.5(a) of 19 NYCRR;

(iii) a bioaccumulation of contaminants in flora or fauna to a level that causes, or that materially contributes to, significant adverse ecotoxicological effects in flora or fauna or leads, or materially contributes, to the need to recommend that human consumption be limited;

(iv) contaminant levels that cause significant adverse acute or chronic effects to fish, shellfish, Crustacea, and wildlife;

(v) a significant adverse impact to the environment due to a fire, spill, explosion, or similar incident or a reaction that generates toxic gases, vapors, fumes, mists, or dusts; or

(vi) a significant adverse impact to public health, where the site is near residences, recreational facilities, public buildings or property, school facilities, places of work or worship, or other areas where individuals or water supplies may be present, and the New York State Department of Health has determined that the presence of contaminants on such site pose a significantly increased risk to the public health.

(2) The commissioner may also find that contaminants disposed at a site constitute a significant threat to the environment if, after reviewing the available evidence and considering the factors the commissioner deems relevant set forth in this subdivision, the commissioner determines that the contaminants disposed at the site or coming from the site result in, or are reasonably foreseeable to result in, significant environmental damage.

(3) In making a finding under this subdivision as to whether a significant threat to the environment exists, the commissioner may take into account any or all of the

following factors, as may be appropriate under the circumstances of the particular situation:

- (i) all data and information related to the factors, individually or in combination, set forth in paragraph (a)(1) of this subdivision;
- (ii) the duration, areal extent, or magnitude of severity of the environmental damage that may result from a release of contaminants;
- (iii) type, mobility, toxicity, quantity, bioaccumulation, and persistence of contaminants present at the site;
- (iv) manner of disposal of the contaminants;
- (v) nature of soils and bedrock at and near the site;
- (vi) groundwater hydrology at and near the site;
- (vii) location, nature, and size of surface waters at and near the site;
- (viii) levels of contaminants in groundwater, surface water, sediments, air, soil vapor and soils at and near the site and areas known to be directly affected or contaminated by waste from the site, including, but not limited to, contravention of surface water and groundwater quality standards set forth in Part 703 of this Title and drinking water standards set forth in Subpart 5-1 and Part 170 of 10 NYCRR;
- (ix) proximity of the site to residences, recreational facilities, public buildings or property, school facilities, places of work or worship, and other areas where individuals may be present;
- (x) the extent to which contaminants and/or contaminant constituents have migrated or are reasonably anticipated to migrate from the site;
- (xi) the proximity of the site to areas of critical environmental concern (such as, wetlands or aquifers);
- (xii) the potential for wildlife or aquatic life exposure that could cause an increase in morbidity or mortality of same;
- (xiii) the integrity of the mechanism, if any, that may be containing the contaminants to assess the probability of a release of the contaminants into the environment; and
- (xiv) the climatic and weather conditions at and in the vicinity of the site.

(4) The mere presence of contaminants at a site or in the environment is not a sufficient basis for a finding that contaminants disposed at a site constitute a significant threat to the environment.

(5) In making a finding under ECL 27-1313(3)(b)(ii) that a significant threat to the environment presents an imminent danger of causing irreversible or irreparable environmental damage, the commissioner must first find that:

- (i) the contaminants disposed at the site constitute a significant threat to the environment;
- (ii) there is insufficient time within which to start and complete all administrative procedures to establish an identified responsible party's liability to devise and implement a program for the site, and to start and complete all

measures necessary to contain, alleviate, or end the threat to life or health or to the environment sought to be averted, including (if the department, in its discretion, believes it to be cost-effective) the development and implementation of a remedial program; and

(iii) the nature of the significant environmental damage reasonably foreseeable to occur if no action were to be taken to avert a release or further release of contaminants into the environment is such, with respect to the component of the environment reasonably foreseeable to be adversely affected, either as to be of long duration; or that the component of the environment reasonably foreseeable to be affected cannot be fully restored to pre-release conditions.

(6) In making a finding under ECL 27-1313(3)(b)(ii) that a significant threat to the environment is causing irreversible or irreparable environmental damage, the commissioner must first find that:

(i) significant environmental damage has occurred; and

(ii) the nature of that environmental damage is such, with respect to the component of the environment adversely affected, either as to be of long duration; or that the component of the environment affected cannot be fully restored to pre-release conditions.

(7) In making a finding under ECL 27-1313(3)(b)(iii) that the significant threat to the environment posed by contaminants disposed at a site makes it prejudicial to the public interest to delay action until a proceeding can be held as set forth in ECL article 27, title 13, the commissioner must determine either that further environmental damage is reasonably anticipated to result during such a hearing; or that, if environmental damage has not yet occurred, such is reasonably anticipated to occur during the pendency of the proceeding.

(b) Site classification.

(1) The department shall maintain and make available for public inspection a registry of inactive hazardous waste disposal sites, in accordance with ECL 27-1305. The department will include information on such Registry, including but not limited to, the site description, land use, acreage, and contaminants disposed.

(2) The Registry maintained by the department must include all sites, except as provided in subdivision (c) of this section, known to the department at which contaminants, as defined in section 375-2.2(a) of this Subpart have been confirmed to have been disposed in an amount that:

(i) presently constitutes a significant threat to public health or the environment, as described in subdivision (a) of this section; or

(ii) is reasonably foreseeable to constitute a significant threat to public health or the environment.

(3) The department will, based upon the information available, classify sites according to the following criteria:

(i) a class 1 site is one at which:

(a) contamination constitutes a significant threat to public health or the environment; and

(b) the significant threat to public health or environment is causing, or presents an imminent danger of causing, either irreversible or irreparable damage to the environment;

(ii) a class 2 site is one at which contamination constitutes a significant threat to public health or the environment, as described in subdivision (a) of this section;

(iii) a class 3 site is one at which contamination does not presently, constitute a significant threat to public health or the environment, as described in subdivision (a) of this section;

(iv) a class 4 site is one that has been properly closed but that requires continued site management, consisting of operation, maintenance, and monitoring; or

(v) a class 5 site is one that has been properly closed and requires no further action.

(4) The department will investigate such areas or structures which it has reason to believe may need to be included on the Registry and may establish an administrative category for such areas or structures.

(5) The Registry is informational in nature, and a site is not required to be on the Registry to confer jurisdiction for action by the department according to statute or its implementing regulations.

(6) When final decisions concerning an initial site listing or classification are made, the department shall provide notice:

(i) to the owner of the site or an area of the site by certified mail, 15 days prior to public noticing such listing decision;

(ii) to the adjacent property owners, the chief executive officer of the city, town or village and the public water supplier, if any, in which the site is located; and

(iii) to the site contact list, in a timely manner, after the listing decision is complete. If a site contact list has not been developed, by publication in a local newspaper.

(7) Any person may provide to the department, and the department shall consider, information relevant to a site listed on the Registry or to an area or structure which may need to be included on the Registry.

(8) In classifying the site, the department may:

(i) disregard any amelioration of conditions at such site accomplished by the interim remedial measure unless the interim remedial measure achieves the goal of the remedial program for such site as described in subdivisions 375-2.8(a) and (b) of this Title; and

(ii) base its determination upon facts and circumstances known to the department to have existed at any time since the date upon which such site was

first listed on the Registry that demonstrate the highest relative priority of the need for action at such site; and

(9) The Registry may be updated by adding, deleting or reclassifying sites at any time, in accordance with this section.

(i) A site is designated on the Registry 20 days after the date the director of the division of environmental remediation or their designee enters their approval of the reclassification in the electronic database.

(c) Site classification deferral.

(1) The department will defer the assessment or reassessment of sites for inclusion on the Registry which are the subject of a complete application for, negotiations over, or implementation of:

(i) a brownfield site cleanup agreement as set forth in ECL article 27, title 14; or

(ii) a State assistance contract for an environmental restoration project.

(2) The deferral will continue for so long as the remedial party is in compliance with the terms of such agreement or State assistance contract.

(3) The department shall assess or reassess such site upon termination of the agreement or State assistance contract.

(d) Site reclassification or modification.

(1) Site reclassification. The department may review the classification of any site on the Registry at any time but must review the classification of each site on the Registry at least annually not later than March 31 of each year.

(2) Site modification. The site boundary description on the Registry will be revised by the department as appropriate based upon:

(i) new information regarding the nature and extent of contamination present at the site; or

(ii) a portion of the site being remediated to allow the unrestricted use of that portion of the site.

(3) The local governments of jurisdiction should be notified of changes within 10 days.

(e) Site delisting.

(1) The department will not delete any site from the Registry without providing, at least 60 days prior to the proposed delisting, written notice to:

(i) the owner or operator of the site;

(ii) the public by publication of a notice in the *Environmental Notice Bulletin* and newspaper of general circulation in the county in which the site is located;

(iii) the site contact list, which shall include the local governments of jurisdiction.

(2) The department shall provide an opportunity for submittal of written comments on the proposed delisting, of at least 30 days, and may provide an opportunity to provide oral comments at a public meeting.

(3) The department shall make publicly available a summary of any comments received.

(4) The department may delist a site if:

(i) the remedial investigation does not confirm that the requirements of paragraph 375-2.7(b)(2) of this section are satisfied;

(ii) a certificate of completion has been issued and:

(a) no environmental easement is required; or

(b) an environmental easement and site management plan are required, and such documents only require:

(1) institutional controls, with periodic certification, in the form of land use or groundwater use restrictions; and/or

(2) engineering controls to address potential soil vapor intrusion.

(5) Sites which are delisted with institutional controls, as set forth in subparagraph (4)(ii) of this subdivision, remain subject to the change of use provisions as set forth in section 375-1.11(d) of this Part.

(f) Petitions.

(1) The only person who has standing to make a petition is:

(i) a current owner; or

(ii) a responsible party by virtue of being the current operator, or former owner or operator of a site.

(2) Only the following relief may be sought by a petition:

(i) the deletion of a site from the Registry;

(ii) the reclassification of a site to a different class on the Registry; or

(iii) the modification of any information concerning a site on the Registry.

(3) The department will act only upon a complete petition.

(i) To be complete, a petition must be submitted by a person identified in paragraph (f)(1) of this subdivision and must seek only relief identified in paragraph (f)(2) of this subdivision upon the basis of material factual allegations supported by proof that tends to establish the right to the relief sought.

(ii) If the relief being sought is identified in subparagraph (f)(2)(i) or (ii) of this subdivision, the proof must be in the form of an affidavit made by a person having direct knowledge of, or who is an expert with regard to, the subject of the matters covered by the petition.

(4) A petition is a written instrument that is filed with the department.

(5) After receipt of a complete petition, the department shall not later than:

(i) 15 calendar days after receipt, publish notice thereof in the environmental notice bulletin, including a deadline not less than 15 nor more than 21 calendar days after the date of publication for submission of written comments on the petition including any request for an administrative hearing; and

(ii) 45 calendar days after receipt of a complete petition, the department shall either:

(a) determine to decide the petition summarily; in such case, the department will proceed to decide the petition, and provide its decision to the petitioner not later than 30 calendar days after such determination; or

(b) if a significant degree of public interest exists, determine that the petition should not be decided summarily and that an administrative hearing should be convened on a date not more than 90 calendar days after receipt of a complete petition; in such case, not sooner than 30 calendar days before such hearing, the department shall notify the petitioner and all other persons known by the department to be proper petitioners of the department's intent to convene such hearing, publish notice thereof in the environmental notice bulletin, and require the petitioner to publish notice thereof at the petitioner's expense in a newspaper of general circulation in the county in which the site is located. Such hearing shall be conducted on the petition and the response thereto by program staff, if any. The burden of proof in such hearing shall be on the petitioner. Upon the conclusion of such hearing, the designated appeal individual will decide the petition and provide the decision to the petitioner not later than 30 calendar days after the conclusion. The decision of the designated appeal individual shall be the final agency action. The designated appeal individual to conduct such hearing is the assistant director of the division of environmental remediation, or such other individual as may be designated, with complete discretion to regulate the course of such hearing in any fair and impartial manner, including without limitation the discretion to determine the admissibility of evidence and to preclude or restrict oral argument.

(6) The department shall comply with the provisions under subdivision (b) or (c) of this section prior to changing the site classification or listing.

375-2.8 Remedial program.

(a) The goal of the remedial program for a specific site is to restore that site to predisposal conditions, to the extent feasible. At a minimum, the remedy selected shall eliminate or mitigate all significant threats to the public health and to the environment presented by contaminants disposed at the site through the proper application of scientific and engineering principles and in a manner not inconsistent with the national oil and hazardous substances pollution contingency plan as set forth in section 105 of CERCLA, as amended as by SARA.

(b) Application of the soil cleanup objectives.

(1) The remedial party must utilize soil cleanup objectives that eliminate or mitigate the significant threat and are protective of public health and the environment. The remedial party, subject to department approval, may:

(i) utilize the soil cleanup objectives, as set forth in section 375-6.8 of this Part;

(ii) develop or modify site specific soil cleanup objectives, as set forth at section 375-6.9 of this Part; or

(iii) propose site-specific soil cleanup objectives which are protective of public health and the environment based upon other information.

(2) The soil component of the remedial program will consider the soil cleanup objectives for unrestricted use, as set forth in Table 375-6.8(a) of this Part, as representative of pre-disposal conditions for remedial programs proceeding as set forth in subparagraphs (1)(i) or (1)(ii) of this subdivision, unless an impact to ecological resources has been identified.

(3) Cleanup objectives for other media. The threat to public health and the environment resulting from contamination in all other environmental media shall be evaluated in the development of remedial alternatives in the feasibility study to ensure that the remedial program meets the requirements of this subdivision and section 375-1.8 of this Part.

(c) Feasibility Study.

(1) A feasibility study shall be conducted by the remedial party that develops and evaluates, using the factors in section 375-1.8(f) of this Part, alternatives for all contaminated media identified by the remedial investigation of the site.

(2) Where soil contamination above the unrestricted use soil cleanup objectives is identified by the remedial investigation, the feasibility study:

(i) shall develop and evaluate one or more alternatives that achieve the unrestricted use soil cleanup objectives for soil; and

(ii) may evaluate one or more alternatives that achieve a restricted use of the site which may be proposed by the remedial party. Where a restricted use is proposed, the feasibility study shall:

(a) develop and evaluate alternatives to achieve the restricted use proposed by the remedial party; and

(b) develop and evaluate other alternatives, if directed by the department, which will achieve the same use or a less restricted use of the site than that proposed by the remedial party.

(3) The department may approve a remedial program for soil that:

(i) utilizes different soil cleanup objectives between different areas of a site, provided such areas can be defined and described in the environmental easement and the necessary institutional and engineering controls can be effectively implemented, maintained, monitored and enforced through the site management plan;

(ii) considers site specific background concentrations in the development of the remedy; and/or

(iii) achieves a cleanup which is more stringent than the current, intended and reasonably anticipated future land uses of the site and its surroundings.

(4) The department shall select the remedy for the site from among the feasible alternatives:

(i) developed and evaluated by the feasibility study; or

(ii) developed by the department in addition to those presented by the feasibility study.

(d) Interim remedial measures. In the case of a site at which an interim remedial measure has been implemented, the department may determine, based on site-specific circumstances including post-implementation investigation and/or monitoring, that the interim remedial measure satisfies the goal of the remedial program for the site, where only continued implementation of the site management plan associated with the interim remedial measure or other engineering or institutional controls is required. In which event the department will propose the no further action alternative. Provided no other operable units remain for the site requiring action, the department may reclassify or delist the site according to section 375-2.7(d) or (e) of this Subpart.

(e) Remedy selection. The process of selecting a remedy shall be documented in a record of decision, which includes the information identified below.

(1) the location and a description of the site.

(2) a history of the operation of the site.

(3) the current environmental and public health status of the site.

(4) an enforcement history and current status of the site.

(5) the specific goals and objectives of the remedy selected for the site.

(6) a description and evaluation of the remedial alternatives considered, except in the case of no further action remedies.

(7) a summary of the basis for the department's decision.

(8) a list of the documents the department used in its decision making.

(9) a responsiveness summary.

(f) Nothing in this Part shall restrict the department's approval of the use of institutional or engineering controls to address actual or potential exposure at existing residential use properties, in limited instances where the department determines the remediation is not technically feasible or the remedial benefit is substantially outweighed by other factors described in section 375-1.8(f) of this Part.

375-2.9 Certificate of completion.

(a) Upon receipt of the certificate of completion and subject to subdivision (b) of this section, the parties named on such certificate shall not be liable to the department upon any statutory or common law cause of action, except for one for natural resource damages, arising out of the presence of any contaminants in, on, or emanating from the site that was the subject of such certificate.

(b) The certificate of completion does not extend to, nor limit, the State's rights concerning any further investigation and/or remediation the department deems necessary due to:

(1) environmental contamination at, on, under, or emanating from the site if, in light of such conditions, the site is no longer protective of public health or the environment, and the remedial party is not in good faith negotiating, and/or following its approval by the department, implementing a work plan to achieve conditions at the site which are protective of public health and the environment;

(2) non-compliance with the terms of the order or state assistance contract, the remedial work plan, site management plan or the certificate of completion after notice of the failure and reasonable opportunity to cure has been afforded to the remedial party by the department as provided for at section 375-1.9(e)(2) of this Part;

(3) fraud related to the remedial program for the site committed by the certificate holder;

(4) a finding by the department that a change in an environmental standard, factor, or criteria upon which the remedial work plan was based renders the remedial program implemented at the site no longer protective of public health or the environment, and the remedial party is not in good faith negotiating, and/or following its approval by the department, implementing a work plan to achieve conditions at the site which are protective of public health and the environment; or

(5) a change in the site's use subsequent to the department's issuance of the certificate of completion, unless additional remediation is undertaken which shall meet the standard for protection of the public health and environment that applies to this Subpart.

(c) The liability protections set forth in this section shall extend to successors or assigns through acquisition of title to the site to which the certificate applies and to a person who develops or otherwise occupies the site; provided that such persons act with due care and in good faith to adhere to the requirements of the site work plans, site management plan and certificate of completion. However, such liability protections do not extend to, and cannot be transferred, to a responsible party as of the effective date of the certification of completion, unless that person was party to the order for the site on which such certificate was issued.

(d) Liability limitation reopener provisions.

(1) The certificate of completion may be modified or revoked upon a finding by the department that either:

(i) one or more of the circumstances set forth at section 375-1.9(e)(1) of this Part have been met; or

(ii) one or more of the circumstances set forth at subdivision (b) of this section have been met.

(2) Upon such a finding, notice shall be provided to the certificate holder as set forth in section 375-1.9 of this Part.

(3) The certificate holder shall have 30 days, from the effective date of the notice, within which to cure the deficiency or seek dispute resolution. If the certificate holder or

current title owner does not cure the deficiency or seek dispute resolution within such 30-day period, the certificate of completion shall be deemed modified or vacated 31 days after the effective date of the department's notice.

(e) Nothing in this section shall be construed to affect either the liability of any person with respect to any costs, damages, or investigative or remedial activities that are not included in the order or remedial investigation work plan and/or remedial work plan for the site or the department's authority to maintain an action or proceeding against any person who is not subject to the order.

(f) Nothing in this section shall be construed to affect the authority of the department to reach settlement with other persons consistent with its authority under applicable law.

(g) Upon issuance of the certificate of completion, the department will initiate Registry reclassification or delisting proceedings.

375-2.10 Citizen participation.

(a) The department will require that opportunities for public involvement be included in the development and implementation of an inactive hazardous waste disposal site remedial program, as set forth in this section and section 375-1.10 of this Part.

(b) This section applies to all inactive hazardous waste disposal site remedial programs, whether implemented by the department or by a remedial party.

(c) The department will communicate with, and solicit the views of, all interested parties. To accomplish this, at the appropriate time, the department will take the actions identified in paragraphs (1) through (3) of this subdivision.

(1) Provide to those on the site contact list a notice and brief summary of the proposed remedy.

(2) Provide a 30-day period for submission of written and oral comments, including an opportunity for submission of oral comments at a public meeting on the proposed remedy near the site.

(3) Summarize the written and oral comments received during the comment period and make the summary available to the public upon issuance of the record of decision.

(d) The department may require the sending of additional notices and/or fact sheets to those on the site contact list.

(e) All final documents, notices and fact sheets developed for the remedial program will be made available in the document repository.

(f) For interim remedial measures, the department will not require citizen participation activities unless the scope of the IRM is likely to represent the remedy or a significant portion of the remedy, in which event the department will require a 30-day comment period.

(g) Technical assistance grants may be made to qualifying community groups for inactive hazardous waste disposal sites classified as class 1 or class 2 on the Registry.

(1) Grants may be used:

(i) to obtain technical assistance in interpreting information with regard to the nature and extent of contamination at, or emanating from, the site and the

hazard to public health and the environment posed by contaminants located at or emanating from the site;

(ii) to hire health and safety experts to advise affected residents on any health assessments or the hazard, or potential hazard, to life or health resulting from the contaminants at the site; or

(iii) for the training and education of interested affected community members to enable them to more effectively participate in the remedy selection process.

(2) Grants may not be used for the purposes of:

- (i) collecting field sampling data;
- (ii) political activity;
- (iii) lobbying legislative bodies; or
- (iv) litigation purposes.

(3) Qualifying community groups. A community group must meet the following criteria to be eligible:

(i) be either a domestic not-for-profit corporation as defined at NPCL 102(a)(5) or an authorized foreign not-for-profit corporation as defined at NPCL 102(a)(7);

(ii) be exempt from taxation under section 501(c)(3) of the Internal Revenue Code. In determining this criterion, the department may consider any evidence which could be considered by a court pursuant to CPLR 3211(a)(11);

(iii) be affected by a remedial program for such site;

(iv) not be sustained by or controlled by or affiliated with any person that is a responsible party for such site according to applicable principles of statutory or common law liability; and

(v) demonstrate that its membership resides in the community and represents the interests of the community affected by such site. In determining this criterion, the department may consider any evidence that its members' health, economic well-being or enjoyment of the environment are potentially affected by such site.

(4) Grant Amounts. The total amount of all technical assistance grants awarded for a particular class 1 or 2 inactive hazardous waste disposal site is limited to \$50,000. The amount of each technical assistance grant:

(i) will be determined by the department based upon the scope of work in the application; and

(ii) the grant recipient may request increases to its grant, up to the maximum \$50,000 per site. The request should be in writing and include appropriate justification and a budget.

(5) Grant applications. A community group desiring to obtain a grant shall submit an application to the department in such form and manner, and containing such information as the department may require. A complete application consists of:

(i) a completed application form containing such information as the department may prescribe; and

(ii) a certification by a responsible officer of the corporation, in a form provided by the department, which certifies at a minimum that:

(a) the corporation is not sustained by or controlled by or affiliated with any person that is a responsible party for the site according to applicable principles of statutory or common law liability;

(b) all statements made for the purpose of obtaining a grant either are set out in full on this application or are set out in full in exhibits attached to this application and incorporated herein by reference;

(c) all information included in this application, including attachments, is accurate and complete to the best of the responsible officer's knowledge;

(d) that the undersigned is authorized to execute this application for the corporation; and

(e) acknowledges that a false statement made in the certification is punishable as a class A misdemeanor pursuant to section 210.45 of the Penal Law.

(6) A technical assistance grant shall be made by the department pursuant to a State assistance contract between the department and the grant recipient as set forth in section 375-2.5(c) of this Subpart. All such grants are recoverable State costs subject to recovery from responsible parties.

(7) The department may require a responsible party to provide a technical assistance grant up to an aggregate maximum of \$50,000 per site directly to a qualifying community group. Such responsible party shall provide for a grant consistent with the requirements of this subdivision within a time frame directed by the department.

375-2.11 Miscellaneous.

(a) Prohibitions.

(1) Except in the event of an emergency, in which event the remedial party shall comply with section 375-1.5(b)(1) of this Part, no person shall undertake at a site listed on the Registry any physical alteration that constitutes storage, treatment, or disposal of any contaminant which served as the basis for such listing, unless such conduct:

(i) is exempted under section 373 1.1(d) of this Title or permitted under Part 373 of this Title, including corrective action under section 373-2.19 of this Title;

(ii) to provide for corrective actions at a treatment, storage or disposal facility pursuant to section 373-2.19 of this Title; or

(iii) is done with the express written approval of the department granted either by order or in such other manner as the commissioner shall direct.

(2) No person to whom a request has been made pursuant to ECL 27-1307(1) shall fail to comply therewith.

(3) No person to whom a request has been made pursuant to ECL 27-1309(1) shall fail to comply therewith.

(4) No person to whom an order has been issued pursuant to ECL 27-1313(3) shall fail to comply therewith.

(b) State environmental quality review act applicability. Remedy selection and implementation of remedial actions under department approved work plans pursuant to ECL article 27, title 13 are not subject to review pursuant to ECL article 8 and its implementing regulation (6 NYCRR Part 617), as it is an exempt action pursuant to the enforcement exemption provision.

(c) State funding: hazardous waste remedial fund.

(1) The department may expend moneys of the hazardous waste remedial fund provided for at SFL section 97-b for the following purposes:

(i) to pay, in whole or in part, the department's costs and expenses incurred in the development and implementation of a remedial program under the following circumstances:

(a) when a person responsible for a site, having been ordered to do so under section 375 2.1 of this Subpart, has failed to comply with such order;

(b) when a person responsible for a site cannot be identified or located;

(c) when the commissioner makes findings set forth at ECL 27 1313(3)(b)(iii), or the Commissioner of Health makes findings set forth in section 1389-b(3)(b) of the Public Health Law to the extent necessary to address those findings unless the department, in the exercise of discretion, determines that it would be cost-effective to develop and implement the complete program; or

(d) when the department, after making all reasonable efforts to secure voluntary agreement, as documented by the findings of the commissioner set forth at SFL section 97-b(4), has not secured a voluntary agreement by the owner, operator or other responsible person for a site. For purposes of this section, the phrase *all reasonable efforts to secure voluntary agreement* means the diligent conduct of a search to identify responsible parties by a method or methods appropriate to the circumstances of the particular site including, but not limited to, reviews of real property records, regulatory files of appropriate government agencies, publicly available financial information, and private business records obtained under ECL 27 0915; ECL 27 1307; and/or ECL 27 1309; and the selection of the owner and/or operator or other person responsible for a site that the department determines to be an appropriate party with which to negotiate; and diligent conduct of negotiations with that responsible party. Negotiations have been

conducted diligently with a particular responsible party when the department informs that party of the department's intention to negotiate an order on consent with that party the objective of which is to commit that party to the development and/or implementation of a remedial program, and that party:

- (1) does not respond to the department's notification;
- (2) responds to the department's notification by refusing to negotiate;
- (3) starts negotiations and thereafter discontinues same;
- (4) starts negotiations and does not enter into a consent order authorized by section 375-2.5(a) of this Subpart to undertake the objective of the negotiations within the time frame established by the department's notification, which shall not be later than six months after the commencement of negotiations; or
- (5) demonstrates to the department's satisfaction that it is unable to pay for the objective of the negotiation;

(ii) to pay for the cleanup or restoration to its original state of any area where contaminants were disposed of or possessed unlawfully contrary to ECL 27 0914;

(iii) to pay for site identification, classification, and investigation activities including, but not limited to, testing, analyses, and record searches, and the department's related administrative activities;

(iv) to pay for all other activities to develop and regularly update the plan required by ECL 27 1305(3); and

(v) to pay for response actions to clean up spills of contaminants or to abate other public health or environmental hazards caused by contaminants, except those provided for under the New York State Environmental Protection and Spill Compensation Fund, when an emergency exists as documented by the findings of the commissioner in such form as the commissioner may prescribe.

(2) The department must attempt to recover all costs and expenses incurred by the State associated with a site that are attributable to the identification thereof as a site and to the remedial program pertaining to such site.

375-2.12 Reserved.

Subpart 375-3 Brownfield Cleanup Program.

375-3.1 Purpose; applicability.

375-3.2 Definitions.

375-3.3 Eligibility.

375-3.4 Applications.

375-3.5 Brownfield site cleanup agreements.

375-3.6 Work plans and reports.

375-3.7 Significant threat and Registry determinations.

375-3.8 Remedial program.

375-3.9 Certificate of completion.

375-3.10 Citizen participation.

375-3.11 Miscellaneous.

375-3.12 Reserved.

375-3.1 Purpose; applicability.

This Subpart applies to the development and implementation of remedial programs for brownfield sites pursuant to ECL 27-1401, et seq. This Subpart addresses requirements in addition to those requirements identified in Subpart 375-1 of this Part.

375-3.2 Definitions.

As used in this Subpart, the following terms have the following meanings:

(a) *Affordable housing project* means, for purposes of this part, title fourteen of article 27 of the environmental conservation law and section twenty-one of the tax law only, a project that is developed for residential use or mixed residential use that must include affordable residential rental units and/or affordable home ownership units.

(1) Affordable residential rental projects under this subdivision must be subject to a federal, state, or local government housing agency's affordable housing program, or a local government's regulatory agreement or legally binding restriction, which defines a percentage of the residential rental units in the affordable housing project to be dedicated to tenants at a defined maximum percentage of the area median income based on annual household gross income of the occupants.

(2) Affordable home ownership projects under this subdivision must be subject to a federal, state, or local government housing agency's affordable housing program, or a local government's regulatory agreement or legally binding restriction, which sets affordable units aside for homeowners at a defined maximum percentage of the area median income

(3) Affordable Housing Project under this subdivision also means, a project that demonstrates the project is the subject of a determination by a federal, state or local government housing agency that all or a portion of the project or site will qualify for benefits, including but not limited to real property taxation exemptions, is or will be eligible under an affordable housing program which requires that a percentage of

residential rental or home ownership dwelling units be dedicated to tenants or homeowners at a defined maximum percentage or percentages of area median income based on the occupants' households annual gross income. Such federal, state or local affordable housing program shall confer a benefit to the project. For the purposes of this subdivision, the term "benefit" shall be broadly construed, and shall include, but not be limited to, tax benefits, including real estate tax benefits, tax credits, bond financing, subsidy financing, and zoning variances or waivers. To demonstrate eligibility under this subdivision, the project must present a certification of compliance or other evidence of eligibility by a federal, state, or local government affordable housing agency that such project is an affordable housing project.

4) *Area median income* means, for purposes of this subdivision, the area median income for the primary metropolitan statistical area, or for the county if located outside a metropolitan statistical area, as determined by the United States Department of Housing and Urban Development, or its successor, for a family of four, as adjusted for family size.

(b) *Alternatives analysis* means a study undertaken to develop and evaluate options for remedial action in accordance with this Subpart.

(c) *Applicant* means a person whose request to participate in the Brownfield Cleanup Program has been accepted by the department:

(1) *Participant* means an applicant who either:

(i) was the owner of the site at the time of the disposal or discharge of contaminants; or

(ii) is otherwise a person responsible according to applicable principles of statutory or common law liability, unless such person's liability arises solely as a result of such person's ownership or operation of or involvement with the site subsequent to the disposal or discharge of contaminants.

(2) *Volunteer* means an applicant other than a participant, including without limitation a person whose liability arises solely as a result of such person's ownership or operation of or involvement with the site subsequent to the disposal or discharge of contaminants, provided however, such person exercises appropriate care with respect to contamination found at the facility by taking reasonable steps to:

(i) stop any continuing release;

(ii) prevent any threatened future release; and

(iii) prevent or limit human, environmental, or natural resource exposure to any previously released contamination.

(d) *Brownfield site cleanup agreement* means an agreement executed in accordance with ECL 27-1409 by an applicant and the department for the purpose of completing a brownfield site remedial program.

(e) *Cover system or site cover* shall mean an engineering control comprised of physical barriers employed to eliminate exposure pathways to soil contamination by containment of soil, and may be compromised of:

(1) soil cover systems in landscaped or exposed soil areas, which must:

(i) be comprised of soil or other unregulated material as set forth in Part 360 of this title and otherwise complies with applicable regulations; and

(ii) not exceed the applicable soil cleanup objectives for intended use of the site; or

(2) hardscape cover systems consisting of other materials and components where such component already exists or are a component of the redevelopment. Such components may include, but are not limited to; pavement, concrete, paved surface parking areas, sidewalks, building foundations, and building slabs. The required thickness of hardscaped areas (including sub-base, if applicable) must otherwise meet the requirements of the New York State Uniform Fire Prevention and Building Code or local building code, whichever is applicable for the site. These components are subject to the provisions of section 21 of the Tax Law.

(3) For areas where ecological resources are identified, consistent with subpart 375-6.6, the soil cover in those areas shall be adequate to support those ecological resources, as determined by the department regardless of the land use. The soil cover in these areas shall be a minimum of 2 feet thick.

(4) For commercial and industrial use, the soil cover shall be one foot of soil meeting the commercial soil cleanup objectives (SCOs) or industrial SCOs, respectively, found in section 375-6.8(b) of this Part and, as applicable, the protection of groundwater SCOs and protection of ecological resources SCOs, found in section 375-6.8(b) of this Part; or

(5) For restricted residential use, the soil cover shall be two feet of soil meeting the restricted residential SCOs found in section 375-6.8(b) of this Part and, as applicable, the protection of groundwater SCOs and protection of ecological resources SCOs, found in section 375-6.8(b) of this Part.

(f) *Disadvantaged community* shall mean a community that is identified pursuant to section 75-0111 of the ECL.

(g) *Indirect ownership* means an ownership interest in an entity that has an ownership interest in an entity.

(h) *Newspaper notice* means the placement of a prominently located, paid newspaper advertisement in the community bulletin section or similar local section of a newspaper of general circulation in the vicinity of the brownfield site which is the subject of the notice. Such notice shall be in English and in any other language spoken by significant numbers of people within the community.

(i) *Ownership* means the possession of equity in the capital, the stock or the profits of an entity.

(j) *Permanent cleanup or permanent remedy* means a cleanup or remedy that would allow a site to be used for any purpose without restriction and without reliance on the long-term employment of institutional or engineering controls.

(k) *PRP Search* means a search to identify potentially responsible parties (PRP) who may be legally liable for contamination at a particular property, including, but not limited to the current owner/operator, the owner/operator at the time of disposal of hazardous

waste/substances, persons who arranged for the disposal or treatment of hazardous waste/substances, and persons who transported and chose the disposal location of hazardous waste/substances.

(l) *Renewable energy facility site* shall mean real property that has a primary use for:

(1) a renewable energy system, as defined in section sixty-six-p of the public service law; or

(2) any co-located system storing energy generated from such a renewable energy system prior to delivering it to the bulk transmission, sub-transmission, or distribution system. Such facility shall be used primarily for energy generation.

“Renewable energy facility site” shall not include real property that has a primary use for the production of fossil fuel-based energy.

(m) *Requestor* means a person who has submitted an application to participate in the Brownfield Cleanup Program whose eligibility has not yet been determined by the department.

(n) *Substantial Interest* means ownership or indirect ownership of ten per centum or more.

(o) *Underutilized* means, as of the date of application to the Brownfield Cleanup Program, real property on which no more than 50 percent of the permissible floor area of the building or buildings is certified by the applicant to have been used under the applicable base zoning for at least three years prior to the application, which zoning has been in effect for at least three years; and

(1) the proposed use is at least 75 percent for industrial uses; or

(2) at which:

(i) the proposed use is at least 75 percent for commercial or commercial and industrial uses;

(ii) the proposed development could not take place without substantial government assistance, as certified by the municipality in which the site is located, where *substantial government assistance* means a substantial loan, grant, land purchase subsidy, land purchase cost exemption or waiver, or tax credit, or some combination thereof, from a governmental entity; and

(iii) one or more of the following conditions exists, as certified by the applicant:

(a) property tax payments have been in arrears for at least five years immediately prior to the application;

(b) a building is presently condemned, or presently exhibits documented structural deficiencies, as certified by a professional engineer, which present a public health or safety hazard; or

(c) there are no structures.

(p) *Upside down* means, as of the date of application to the Brownfield Cleanup Program, a property where the projected and incurred cost of the investigation and remediation protective for the anticipated use of the property equals or exceeds 75 percent of its independent appraised value, appraised under the hypothetical condition that the property is not contaminated.

375-3.3 Eligibility.

(a) Eligible sites. Any real property that meets the requirements of a brownfield site as defined in section 375-1.2(b) of this Part.

(1) A brownfield site must have contamination on-site at levels exceeding the soil cleanup objectives, or other health-based or environmental standards, criteria or guidance adopted by the department that are applicable based on the reasonably anticipated use of the property.

(2) In determining whether a site is contaminated, the department shall not consider:

(i) contamination of structures located at the site, due to stored materials, electrical appurtenances, lead paint or asbestos, etc.; or

(ii) material not constituting a *contaminant* as defined in section 375-1.2(h) of this Part (e.g., construction and demolition debris, abandoned consumer goods or other solid waste present on the site).

(3) An investigation report submitted with the application must demonstrate that the site requires remediation in order to meet the requirements for the reasonably anticipated end use of the site.

(4) In determining whether the site requires remediation, the department may consider:

(i) the number of samples that exceed applicable standards, criteria or guidance, as presented in the investigation report;

(ii) the magnitude by which the concentrations exceed the applicable standards, criteria or guidance;

(iii) the magnitude by which the concentrations exceed the site-specific background concentrations;

(iv) the potential for human or ecological exposure to contaminants present in any media; and/or

(v) the potential for a contaminant to migrate within or off of the site, or to partition into other media.

(5) In determining the reasonably anticipated use of the site, the department shall consider, without limitation:

(i) current use and historical and/or recent development patterns;

(ii) applicable zoning laws and maps, including whether such zoning anticipates single family housing structures or agricultural uses;

(iii) applicable comprehensive community master plans, local waterfront revitalization plans as provided for in EL article 42, or any other applicable land use plan formally adopted by a municipality;

(iv) any approved redevelopment plan;

(v) natural resources, including proximity of the site to important federal, State or local natural resources, including waterways, wildlife refuges, wetlands, or critical habitats of endangered or threatened species; or

(vi) or any other factor set forth in ECL-1415.

(b) Ineligible sites. Any real property, which is:

(1) on the Registry as class 1; or

(2) on the Registry as class 2, unless:

(i) the property is owned by a volunteer as defined in section 375-3.2(c)(2) of this Subpart or under contract to be transferred to a volunteer; and

(ii) the department, utilizing the PRP search submitted by the requestor in addition to other available information, has not identified any responsible party for that property that has the ability to pay for the remedial program.

(3) listed on the national priorities list established under the authority of 42 USC section 9605;

(4) the subject of an ongoing enforcement action pursuant to ECL article 27, title 7 or title 9 involving solid or hazardous waste or permitted or required to be permitted as a treatment, storage or disposal facility;

(5) a hazardous waste treatment, storage or disposal facility having interim status, unless:

(i) the property is owned by a volunteer as defined in section 375-3.2(c)(2) of this Subpart or under contract to be transferred to a volunteer; and

(ii) the department, utilizing the PRP search submitted by the requestor in addition to other available information, has not identified any responsible party for that property that has the ability to pay for the remedial program.

(6) subject to an order for cleanup under article 12 of the Navigation Law (*oil spill prevention, control, and compensation*) or ECL article 17, title 10 (*control of the bulk storage of petroleum*), except such property shall not be deemed ineligible if it is subject to a stipulation agreement; or

(7) subject to any other on-going State or Federal environmental enforcement action related to contamination at or emanating from the site.

(c) Ineligible parties. A person is ineligible for participation in the Brownfield Cleanup Program if subject to:

(1) a pending action or proceeding relating to the proposed brownfield site in any civil or criminal court in any jurisdiction, or before any State or Federal administrative agency or body, wherein the State or Federal government seeks the investigation, removal, or remediation of contamination or penalties;

(2) an order providing for the investigation, removal, or remediation of contamination relating to the proposed brownfield site; or

(3) an outstanding claim by the New York Environmental Protection and Spill Compensation Fund for cleanup and removal costs under article 12 of the Navigation Law; related to the site for which participation is sought.

(d) Sites are not eligible for tangible property credits if the:

(1) contamination at the site is solely in groundwater and/or soil vapor, and the contamination in such ground water and/or soil vapor is solely emanating from property other than the site subject to the present application; or

(2) property has previously been remediated under one of the department's remedial programs so that it may be developed for its then intended use. These programs include the Industrial Hazardous Waste (RCRA) Site Program (ECL article 27, title 9), the Inactive Hazardous Waste Disposal Site Program (ECL article 27, title 13), the Brownfield Cleanup Program (ECL article 27, title 14), Environmental Restoration Program (ECL article 56, title 5), or Spill Response Program (article 12 of the Navigation Law).

(e) Eligibility for tangible property credit component of brownfield redevelopment tax credits for sites in a city with a population of one million or more.

(1) In determining eligibility for the tangible property credit component of brownfield redevelopment tax credits for a site in a city with a population of one million or more, pursuant to section 21 of the Tax Law, the department shall determine whether the site meets at least one of the following required criteria:

(i) at least half of the site area is located in an environmental zone, as defined in section 21 of the Tax Law;

(ii) the property is underutilized or upside down, as defined by sections 375-3.2(o) and (p) of this Subpart;

(iii) the project is an affordable housing project, as defined by section 375-3.2(a) of this Subpart,

(iv) the project is within a disadvantaged community as defined in 375 - 3.2(f), within a designated brownfield opportunity area, and meets the conformance determinations pursuant to subdivision ten of section nine hundred seventy-r of the general municipal law; or

(v) the project is being developed as a renewable energy facility site as defined in 375 -(3.2)(l).

(f) An applicant may request an eligibility determination for tangible property credits at any time before the site receives a certificate of completion, except for sites seeking eligibility under the *underutilized* definition, which must be requested at the time of application to the program. The applicant is responsible for providing sufficient documentation to allow an eligibility determination to be made by the department or the government entity making the affordable housing or underutilized determinations.

375-3.4 Applications.

(a) Application contents.

(1) An application to participate in the Brownfield Cleanup Program shall be submitted to the department in such form and manner, and containing such information, as the department may require.

(2) The signed application, including attachments, shall be submitted in hard copy or electronically.

(b) Complete applications.

(1) An application will be deemed complete when the department determines that it contains sufficient information to allow the department to determine eligibility and the

current, intended and reasonably anticipated future land use of the site. For an application seeking a determination that real property either on the Registry as a class 2, or a hazardous waste treatment, storage or disposal facility having interim status, is an eligible site, such application will not be deemed complete until the requestor submits a PRP search, and the department determines there are no responsible parties that have the ability to pay for the investigation and remediation of the site.

(2) The department shall notify the requestor in writing within 30 days after the receipt of an application whether such application is complete. Such notification shall advise that the application is either:

(i) complete; or

(ii) incomplete, specifying the information that must be submitted or supplemented to make the application complete.

(3) If the department determines that an application is incomplete, the department may return the application.

(4) Upon the receipt of an application:

(i) the department will notify the administrator of the New York Environmental Protection and Spill Compensation Fund of the complete application; and

(ii) the administrator, as set forth in ECL 27-1407(4), shall notify the department and requestor within 30 days of such notice of any outstanding claim by the New York Environmental Protection and Spill Compensation Fund against the requestor.

(5) Upon the determination that an application is complete, the requestor must provide a:

(i) newspaper notice of the application and any associated work plans or reports submitted with the application, as set forth in section 375-3.2(g) of this Subpart; and

(ii) written notice of the application and any associated work plans or reports submitted with the application to the site contact list.

(6) Upon the determination that an application is complete, the department will:

(i) commence a public comment period of 30 days, unless a remedial work plan is submitted with such application, in which event the public comment period shall be 45 days; and

(ii) place a notice in the *Environmental Notice Bulletin* of the complete application.

(c) Application approval. The department shall use all best efforts to expeditiously notify the requestor if the application is accepted or rejected.

(1) For an application, or an application which includes a remedial investigation work plan. The department will use all best efforts to reply within 45 days after receipt of a complete application, or five days after the close of the public comment period, whichever is later.

(2) For an application which includes a final investigation report or a draft remedial work plan. The department will use all best efforts to reply within 60 days after receipt of an application, or five days after the close of the public comment period, whichever is later.

(3) For an application seeking a determination that the site is eligible for the tangible property credit component of the brownfield redevelopment tax credit, the department will notify the applicant of its determination concurrently with its notification regarding site eligibility.

(d) Public interest consideration. The department may reject a request to participate in the Brownfield Cleanup Program, even if the real property meets the definition of *brownfield site*, upon a determination that the public interest would not be served by granting such request. In making this determination, the department shall consider, but is not limited to, the criteria set forth in ECL 27-1407(9).

375-3.5 Brownfield site cleanup agreements.

(a) In addition to such further terms and conditions as the department may require in the brownfield site cleanup agreement, the brownfield site cleanup agreement shall include the description of the site boundaries and be deemed to include, and the applicant shall comply with, all of the provisions set forth in section 375-1.5(b) of this Part and the following:

(1) Indemnification. Unless otherwise approved by the department, a remedial party shall indemnify and hold the State, the trustee of the State's natural resources, and their representatives and employees harmless from any claim, suit, action, and cost of every name and description arising out of or resulting from the fulfillment or attempted fulfillment of the brownfield site cleanup agreement except for those claims, suits, actions, and costs arising from the gross negligence or willful or intentional misconduct by the State of New York, and/or its representatives and employees during the course of any activities conducted pursuant to the remedial program. The department shall provide written notice no less than 30 days prior to commencing a lawsuit seeking indemnification.

(b) Termination of the agreement by the applicant. The applicant may terminate a brownfield site cleanup agreement at any time and for any reason, provided that:

(1) the applicant provides written notice to the department at least 15 days in advance of the termination;

(2) the termination does not pose an immediate threat to public health or the environment; and

(3) at the time of termination, the site is in no worse condition, from an environmental and public health perspective, than before the applicant entered into the brownfield site cleanup agreement.

(4) if paragraphs (1), (2), and (3) of this subdivision are satisfied, the brownfield site cleanup agreement shall be terminated 15 days following receipt of notification of same.

(c) Termination of the agreement by the department. The department may terminate the brownfield site cleanup agreement for cause, including, but not limited to, if the applicant fails to substantially comply with the agreement's terms and conditions, including, without limitation, the failure to initiate, proceed with, or complete the remedial program in accordance with its schedule.

(1) Prior to termination of an agreement by the department, the department shall:

(i) provide notice to the applicant in writing of its intention to terminate the agreement and the reasons for the intended termination;

(ii) if the termination is based on a curable item or deficiency the applicant shall be provided with a reasonable opportunity of not less than 30 days to correct deficiencies;

(2) The brownfield site cleanup agreement shall be terminated 31 days after the effective date, as set forth in section 375-1.11(e) of this Part, of the department's notice of intent to terminate, unless the remedial party:

(i) seeks dispute resolution within 15 days of the effective date of the notice; or

(ii) cures the deficiency within the 30-day period after the effective date of the notice.

(3) Nothing herein shall preclude the department from terminating an agreement in less than 30 days' notice if the department determines that information provided or certifications made by the applicant are materially inaccurate or incomplete. Prior to terminating an agreement pursuant to this paragraph, the department shall give the applicant written notice, indicating the reason for the termination, and an opportunity to demonstrate that information or certifications referenced above were materially accurate and complete.

(4) Nothing herein shall preclude the department from terminating an agreement in less than 30 days' notice if the department determines that the applicant performed work as part of a remedial program that was not detailed in a department-approved work plan. Prior to terminating an agreement pursuant to this paragraph, the department shall give the applicant written notice, indicating the reason for the termination, and an opportunity to demonstrate that the work performed as part of the remedial program was detailed in a department-approved work plan.

(d) Termination by either the applicant or the department does not affect the applicant's obligations to pay State costs and provide indemnification pursuant to section 375-3.5(a)(1) of this Subpart until and including the date of termination.

(e) The department shall not consider the applicant an operator of such brownfield site based solely upon execution or implementation of such brownfield site cleanup agreement for purposes of remediation liability.

(f) The applicant, effective upon the execution of the brownfield site cleanup agreement, shall be deemed to have waived any right such applicant has or may have to make a claim against the State of New York pursuant to article 12 of the Navigation Law with respect to the brownfield site, and a release of the New York Environmental Protection and Spill

Compensation Fund from any and all legal or equitable claims or causes of action that such applicant may have as a result of entering into a brownfield site cleanup agreement or fulfilling a brownfield site remedial program at such site.

(g) The applicant shall submit with every brownfield cleanup agreement a non-refundable program fee of \$50,000 unless the applicant is eligible for a program fee waiver. An applicant will only be eligible for a program fee waiver if:

1. The applicant and department agree to a provision in the brownfield cleanup agreement which states that the applicant will develop the brownfield site with the dedication of 100 percent of the residential rental or home ownership units in an affordable housing project to tenants or homeowners at a defined maximum percentage of area median income based on the occupants' household annual income;

2. The applicant and department agree to a provision in the brownfield cleanup agreement which states that the applicant, which is otherwise eligible for tangible property tax credits, waives its eligibility for tangible property tax credits under Section 21 of the Tax Law;

3. The applicant is exempted from taxes under articles nine, nine-a, twenty-two or thirty-three of the tax law; or

4. More than half of the brownfield site is within a disadvantaged community and the applicant demonstrates, through submittal of third-party attestations or certifications that, but for the program fee, the remediation and redevelopment of the brownfield site would not be financially viable for the applicant and economically viable in the disadvantaged community.

375-3.6 Work plans and reports.

(a) The provisions set forth in section 375-1.6 of this Part shall apply to remedial programs implemented under this Subpart.

(b) The department shall use all best efforts to expeditiously approve, modify, or reject a proposed work plan within 45 days from its receipt or within 15 days of the close of the comment period, whichever is later.

(c) The first work plan shall be submitted no later than 30 days after the effective date of the brownfield site cleanup agreement.

(d) Each work plan submitted to the department shall include a schedule for implementation of the activities contained therein.

(e) Each report submitted to the department shall include a schedule for the submission of any subsequently required work plans.

375-3.7 Significant threat and Registry determinations.

(a) Significant threat.

(1) No later than 20 days after approval of the remedial investigation report, the department shall determine if the site constitutes a significant threat to public health or the environment.

(2) In evaluating whether the presence of contamination at a site constitutes a significant threat, the department shall consider the criteria outlined in section 375-2.7(a) of this Part. In considering the criteria, the department shall evaluate the threat posed by both hazardous waste and petroleum at the site.

(3) Notice of the department's determination shall be published by the applicant, as a fact sheet issued to the site contact list in accordance with section 375-3.10 of this Subpart. Sites that have been determined by the department to constitute a significant threat:

(i) may be the subject of a technical assistance grant in accordance with section 375-3.10(c) of this Subpart; and

(ii) must be remediated pursuant to a remedy selected by the department from a department-approved alternatives analysis prepared by the applicant.

(b) Registry determinations.

(1) The department will, upon approval of an application as set forth in section 375-3.4(c) of this Subpart, defer its assessment or reassessment of a brownfield site's classification on the Registry in accordance with section 375-2.7(c) of this Part.

(2) Upon termination of the brownfield site cleanup agreement, the department shall:

(i) if a significant threat determination has not been made, assess such site for a significant threat due to hazardous waste disposal and classify the site accordingly; or

(ii) if it has been determined that hazardous waste disposal constitutes a significant threat, the site will be classified on the Registry as set forth in section 375-2.7(b) of this Part.

375-3.8 Remedial program.

(a) The remedy shall be fully protective of public health and the environment including, but not limited to, groundwater according to its classification pursuant to ECL 17-0301, drinking water, surface water and air (including indoor air), sensitive populations, including children and ecological resources, including fish and wildlife. In addition, a remedy will be selected upon consideration of the following:

(1) a remedial program that achieves a permanent cleanup of a contaminated site, including the restoration of groundwater to its classified use, is preferred over a remedial program that does not do so;

(2) the selection of a remedy will take into account the current, intended, and reasonably anticipated future land uses of the site and its surroundings; and

(3) the risk presented by residual contamination as defined at ECL 27-1405.28 at a site shall not exceed an excess cancer risk of one in one million for carcinogenic end points and a hazard index of one for non-cancer end points, except:

(i) for remedies developed in accordance with paragraph (e)(4) of this section, with a cleanup level which exceeds the parameters in paragraph (a)(3) of this section, the remedial party must demonstrate that such level would be

protective of public health and the environment. This demonstration must be included in the alternatives analysis developed in accordance with subdivision 375-3.8(f) of this section; and

(ii) a cleanup level which exceeds the parameters in paragraph (a)(3) of this section, may be approved by the department under paragraph (e)(4) of this section, without requiring the use of institutional or engineering controls to eliminate exposure only upon a site-specific finding by the commissioner, in consultation with the State Commissioner of Health, that such level shall be protective of public health and the environment.

(b) Scope of investigation. Remedial investigations and final investigation reports must be completed in accordance with ECL 27-1411(1); ECL 27-1415(2) and this Part.

(1) On-site contamination. Applicants must fully investigate and characterize the nature and extent of contamination on the brownfield site.

(2) Off-site contamination. Responsibility for off-site contamination is determined by the applicant's status:

(i) a volunteer shall perform a qualitative exposure assessment of the contamination that has migrated from the site in accordance with ECL 27-1415(2)(b) and department guidance. Off-site field investigation and sampling may be required to identify and sample any potential areas of contamination to complete the qualitative exposure assessment, which may include:

(a) evaluation and sampling of nearby structures for soil vapor intrusion;

(b) sampling of off-site soil vapor;

(c) sampling of off-site groundwater if there is a potential off-site exposure pathway; and

(d) sampling of off-site soil if there is a potential off-site exposure pathway.

(ii) For sites being addressed by a volunteer, the volunteer has no obligation to implement a remedy to address an off-site exposure identified by this assessment. The department will:

(a) bring an enforcement action against any parties known or suspected to be responsible for contamination (other than such volunteer) at or emanating from the site according to applicable principles of statutory or common law liability within six months of the determination that a site poses a significant threat; or

(b) if such action cannot be brought, or does not result in the initiation of a remedial program by such party or parties at such site, use best efforts to begin a remedial program to perform the remediation of off-site contamination at such site within one year of the completion of such enforcement action or the completion of the volunteer's on-site remedial program, whichever is later; or

(iii) a participant shall fully investigate and characterize the nature and extent of contamination that has migrated or emanated from the site to off-site locations.

(3) The final remedial investigation report must demonstrate whether conditions at the site meet the applicable unrestricted use soil cleanup objectives set forth in Table 375-6.8(a) of this Part without remediation.

(4) Where the applicable unrestricted use soil cleanup objectives set forth in Table 375-6.8(a) of this Part will not be achieved, any determination that the requirements of the Brownfield Cleanup Program have been met without the need for remediation must be supported by an alternatives analysis.

(c) Remedy selection.

(1) Applicants must, based upon the characterization of the nature and extent of contamination on-site and qualitative exposure assessment, select or propose a remedy for the contamination present on the site and address further contaminant migration from the site.

(2) Participants must also, based upon the characterization of the nature and extent of contamination that has migrated from the site, propose or select a remedy which addresses the off-site contamination. The off-site remedy must, at a minimum, address exposures related to site contamination to allow for residential use of the property unless the use of the property is limited to a more restrictive use (e.g. commercial or industrial).

(3) The department will select, or approve, a remedy for a site after consideration of an alternatives analysis, including an evaluation consistent with section 375-1.8(f) of this Part, presented in, or made part of, a site-specific remedial work plan in accordance with ECL section 27-1413(2).

(4) Selection of a remedy. For sites that the department has determined:

(i) constitute a significant threat, the department shall select the remedy from the department-approved alternatives analysis; or

(ii) do not constitute a significant threat, the applicant may select the remedy from a department-approved alternatives analysis.

(5) For class 2 sites admitted to the Brownfield Cleanup Program where:

(i) a Record of Decision has been issued, the Brownfield Cleanup Program applicant will implement the on-site elements of the selected remedy, subject to department approval of what constitutes the on-site elements of the remedy; or

(ii) the site remedy is to be developed under the Brownfield Cleanup Program, a feasibility study pursuant to section 375-2.8(c) of this Part will be required in place of the alternatives analysis and the remedy will be selected by the department in accordance with section 375-2.8(e) of this Part.

(d) Application of the soil cleanup objectives.

(1) General. The department may approve a remedial program that utilizes different tracks and soil cleanup objectives for different uses between different areas of

a site, provided such areas can be defined and described in the environmental easement and the necessary institutional and engineering controls can be effectively imposed, implemented, operated, monitored and maintained in accordance with the department approved site management plan.

(2) Cleanup objectives for other media. The exposure to public health and the environment resulting from contamination in all other environmental media shall be evaluated and cleanup objectives to eliminate or mitigate the exposure shall be proposed by the remedial party and any cleanup objectives approved by the department for other media will be included in the alternatives analysis to ensure that the remedial program meets the requirements of this section and section 375-1.8 of this Part.

(e) Cleanup tracks. For sites or portions of sites where the department has determined that remediation is needed to meet the remedial program requirements, each remedial alternative that is developed and evaluated shall, in addition to all other requirements in this section and section 375-1.8(c) of this Part, conform to the requirements of one of the following cleanup tracks.

(1) Track 1: Unrestricted use. The following provisions apply to a site, or portion thereof, being addressed pursuant to Track 1:

(i) the remedial program shall achieve a cleanup level that will allow the site to be used for any purpose without any restrictions on the use of the site as described in section 375-1.8(g)(1)(i) of this Part, except as noted in subparagraph (iii) of this paragraph.

(ii) the soil component of the remedial program shall achieve the unrestricted soil cleanup objectives as set forth in Table 375-6.8(a) of this Part, for all soils above bedrock.

(iii) if the remedial program is being implemented by a volunteer:

(a) the remedial program can include the use of long-term institutional or engineering controls to achieve remedial objectives for groundwater, so long as the volunteer has demonstrated to the department's satisfaction that there has been a bulk reduction in groundwater contamination to asymptotic levels at the time the certificate of completion is issued. In such instances, the volunteer shall receive a Track 1 certificate of completion.

(b) and when the volunteer has not demonstrated to the department's satisfaction that there has been a bulk reduction in groundwater contamination to asymptotic levels at the time the certificate of completion is issued, the volunteer shall receive a Track 2 certificate of completion, as described in paragraph (2) of this subdivision. The volunteer may petition the department for a modification of the certificate of completion at any time up until five years after issuance of a certificate of completion. If the volunteer demonstrates that there has been bulk reduction in groundwater

contamination to asymptotic levels, a modified Track 1 certificate of completion will be issued.

(1) The department will consider the site to have achieved a Track 2 cleanup from the date the certificate of completion is issued until such time as a modified Track 1 certificate of completion is issued.

(2) The department will consider the site to have achieved a Track 1 cleanup from the date that the modified Track 1 certificate of completion is issued and not from any date prior

(c) the remedial program can include the use of institutional or engineering controls to achieve remedial objectives for soil vapor. In such instances, the volunteer shall receive a Track 2 certificate of completion, as described in paragraph (2) of this subdivision. The volunteer may petition the department for a modification to the certificate of completion at any time up until five years after issuance of a certificate of completion. If the volunteer demonstrates that the remedial objectives for soil vapor have been achieved and the institutional or engineering controls are no longer necessary, a modified Track 1 certificate of completion will be issued to the volunteer.

(1) The department will consider the site to have achieved a Track 2 cleanup from the date the certificate of completion is issued until such time as a modified Track 1 certificate of completion is issued.

(2) The department will consider the site to have achieved a Track 1 cleanup from the date that the modified Track 1 certificate of completion is issued.

(iv) if the remedial program is being implemented by a participant, it shall not include the use of long-term institutional or engineering controls to achieve remedial objectives for any media, either on-site or off-site.

(v) the department may require the applicant, or the applicant may request, to develop a soil cleanup objective for a contaminant not included in Table 375-6.8(a) of this Part as set forth in section 375-6.9 of this Part.

(2) Track 2: Restricted use with generic soil cleanup objectives. The following provisions apply to a site, or portion thereof, being addressed pursuant to Track 2:

(i) the remedial program may provide for the restriction of the use of the site as described in section 375-1.8(g)(2) of this Part;

(ii) the soil component of the remedial program shall achieve the lowest of the applicable contaminant-specific SCOs found in Table 375-6.8(b) for the upper 15 feet of soil, or to the top of bedrock, whichever is shallower. To determine which SCOs are applicable, refer to:

(a) 375-6.4 for the Protection of Public Health SCO;

- (b) 375-6.5 for the Protection of Groundwater SCO, and;
- (c) 375-6.6 for the Protection of Ecological Resources SCO.

(iii) soil below 15 feet cannot represent a source of contamination. At the department's discretion, however, for all Track 2 cleanups other than Residential, soils below 15 feet which are also at or below the water table, may contain contamination at levels exceeding the groundwater protection SCO if that contamination is being addressed by an on-going groundwater remedy. In determining whether to exercise such discretion, the department may consider, without limitation, the:

- (a) degree to which contamination is in excess of the Protection of Groundwater SCO;
- (b) areal extent of contamination in excess of the Protection of Groundwater SCO;
- (c) practicability of removing or permanently treating the remaining soil contamination; and,
- (d) degree to which contamination has migrated from the site or has the potential to migrate from the site.

(iv) except as noted in 375-3.8(e)(2)(iii), above, the remedial program shall not use engineering controls to achieve the restricted soil cleanup objectives. The use of institutional or engineering controls to achieve the remedial action objectives for other environmental media is allowed; and,

(v) the environmental easement for the site must require that any contaminated soils remaining at depths greater than 15 feet will be managed along with other site soils, pursuant to a site management plan, unless the department waives that requirement.

(3) Track 3: Restricted use with modified soil cleanup objectives. The remedial program for a site being addressed pursuant to Track 3 shall satisfy the provisions for a Track 2 remedial program; provided, however, the department may approve the modification of one or more of the contaminant-specific soil cleanup objectives set forth in Table 375-6.8(b) of this Part based upon site-specific data. Any such modification shall be performed in accordance with section 375-6.9 of this Part.

(4) Track 4: Restricted use with site-specific soil cleanup objectives. The following provisions apply to a site, or portion thereof, being addressed pursuant to Track 4:

(i) in developing the site-specific soil cleanup objectives, the applicant must address all sources per section 375-1.8(c) of this Part, and may solely or in combination:

- (a) use the soil cleanup objectives, as set forth in Subpart 375-6 of this Part;
- (b) develop or modify site-specific soil cleanup objectives, as set forth at section 375-6.9 of this Part; or

(c) propose site-specific soil cleanup objectives which are protective of public health and the environment;

(ii) the remedial program may include the use of long-term institutional or engineering controls to address all media; and

(iii) Track 4 remedies must also meet the Cover System Requirements in subdivision 3.2(e) as appropriate. If offsite soil is brought to the site to meet the Cover System Requirements, the soil must satisfy the requirements of subdivision 375-6.7(d).

(5) All Tracks. For remedial programs under all Tracks, the threat to public health and the environment resulting from contamination in environmental media other than soil shall be evaluated in the development of remedial alternatives and addressed in the alternatives analysis to ensure that the remedial program meets the requirements of ECL 27-1415(1), subdivisions 375-3.8(a) and (f) of this section, and section 375-6.7 of this Part.

(f) Alternatives analysis. An alternatives analysis evaluates each remedial alternative developed for a brownfield site, using the selection factors set forth in section 375-1.8(f) of this Part.

(1) An alternatives analysis must be prepared for each site, or operable unit of a site, unless:

(i) the department has selected a remedy for the site in a record of decision under Subpart 375-2 or Subpart 375-4 of this Part prior to the approval of the application for participation;

(ii) the remedy proposed meets the requirements of Track 1; or

(iii) the department has approved the use of a presumptive remedy proposed from a department-approved list of presumptive remedies.

(2) Contents of an alternatives analysis. Each alternatives analysis must include, but is not limited to:

(i) a description of each alternative evaluated in the analysis. Alternatives must be developed and evaluated which address:

(a) on-site contamination if the applicant is a volunteer; and

(b) on-site and off-site contamination if the applicant is a participant;

(ii) a discussion of how each alternative would achieve the requirements of the remedial program, including the Track-specific requirements;

(iii) an analysis of each alternative against the remedy selection factors set forth in section 375 1.8(f) of this Part followed by a comparison of this evaluation to any other alternatives under consideration;

(iv) an evaluation of the reliability and viability of the long-term implementation, maintenance, monitoring, and enforcement of any proposed institutional or engineering controls set forth in section 375-1.8(h) of this Part required by ECL 27-1415(7)(a);

(v) if applicable, an evaluation of feasible remedial alternatives that can achieve groundwater plume stabilization in accordance with section 375-1.8(d) of this Part;

(vi) an identification of the alternative preferred by the applicant for selection;

(vii) a summary of the proposed remedy and basis for concluding that the proposed remedy represents the best alternative among those considered; and

(viii) other information required by the department.

(3) Alternatives to be evaluated. The alternatives analysis proposing a remediation:

(i) pursuant to Track 1, shall develop and evaluate at least one remedial alternative capable of achieving the requirements of paragraph (e)(1) of this section; or

(ii) pursuant to a Track other than Track 1, shall develop and evaluate two or more remedial alternatives, as follows:

(a) at least one unrestricted alternative that meets the requirements of Track 1 as set forth in paragraph (e)(1) of this section, unless a presumptive remedy is selected from a department approved list;

(b) such other alternatives which may be developed by the applicant for the proposed use of the site;

(c) for sites determined by the department to constitute a significant threat, such additional alternatives as the department may require; and

(d) for sites determined by the department not to constitute a significant threat, the department may require a Track 2 evaluation if one has not already been considered pursuant to subparagraph (i) of this paragraph or subclauses (ii)(‘d’)(‘2’) through (‘4’) of this clause after considering the following factors:

(1) the degree to which the remedy selection criteria would be better satisfied by a Track 2 cleanup;

(2) the degree of impact a Track 2 cleanup would have on the applicant's ability to successfully cleanup and/or redevelop the property;

(3) the benefit to the environment to be realized by the expeditious remediation of the property; and

(4) the economic benefit to the State to be realized by the expeditious remediation of the property.

(4) Plume stabilization. In developing remedies for a site where plume stabilization in accordance with section 375-1.8(d) of this Part is a necessary component of the remedy where such plume is emanating from an on-site source.

(i) A participant shall address, to the extent feasible, the on-site and off-site plume. This requirement includes such actions to maintain and monitor any stabilization of the plume.

(ii) To the extent feasible, a volunteer shall address the on-site plume and prevent migration of any plume off-site at the site boundary. This requirement includes actions to maintain and monitor any stabilization of the plume.

(g) Remedial work plan.

(1) The department will issue a decision document describing the remedy for a site, unless it has previously issued a record of decision under Subpart 375-2 or 375-4 of this Part prior to the approval of an application to this program. The remedial work plan shall implement the decision document or record of decision.

(2) A remedial work plan must be prepared in accordance with ECL 27-1411 and 27-1415 and must provide for the development and implementation of the remedy, selected as set forth in paragraph 375- 3.8(c)(4) of this section, for:

(i) on-site contamination if the applicant is a volunteer; and

(ii) on-site and off-site contamination if the applicant is a participant.

(3) A remedial work plan must include at a minimum:

(i) a summary of the site history and the nature and extent of contamination;

(ii) remedial action objectives;

(iii) a summary of the current, intended, and reasonably anticipated future use of the site;

(iv) identification of the cleanup track to be used for remediation of the site as described in subdivision (e) of this section;

(v) identification and evaluation of any and all institutional or engineering controls to be employed as part of the site remedy as required pursuant to section 375-1.8(h) of this Part, if applicable, and subparagraph (f)(2)(iv) of this section;

(vi) an alternatives analysis as set forth in subdivision (f) of this section;

(vii) a schedule for the submission of any subsequent work plans necessary to meet cleanup requirements; and

(viii) other information as required by the department.

(4) Where a remedial work plan will also serve as the remedial design document for a site it shall:

(i) be certified by a professional engineer;

(ii) include, but not be limited to, the following:

(a) plans and specifications sufficient to construct the remedy;

(b) a site health and safety plan;

(c) a community health and safety plan; and

(d) a quality assurance and quality controls plans for sampling, analysis, and construction; and

- (iii) an outline for a site management plan, if the remedy includes any institutional or engineering controls.
- (h) Institutional and engineering controls.
 - (1) Institutional and engineering controls can be included as part of a remedial work plan provided there is compliance with section 375-1.8(h) of this Part and they are evaluated in the alternatives analysis.
 - (2) At nonsignificant threat sites where contaminants in groundwater at the site boundary contravene drinking water standards, the institutional and engineering control certification shall:
 - (i) certify that no new information has come to the owner's attention, including groundwater monitoring data from wells located at the site boundary, if any, to indicate that the assumptions made in the qualitative exposure assessment of offsite contamination are no longer valid;
 - (ii) every five years the remedial party or owner shall certify that the assumptions made in the qualitative exposure assessment remain valid; and
 - (iii) the requirement to provide such certifications may be terminated as set forth in ECL 27-1415(7)(c).
 - (3) For sites where institutional controls are required, an environmental easement shall be executed within 180 days of commencement of the remedial design, or at least three months prior to the date of the anticipated issuance of the certificate of completion, and subsequently recorded by the owner or remedial party, pursuant to ECL article 71, Title 36.

375-3.9 Certificate of completion.

- (a) Notwithstanding the provisions for issuance of a certificate of completion set forth in section 375-1.9 of this Part, the department shall not issue a certificate if the applicant is identified as subject to an outstanding claim by the New York Environmental Protection and Spill Compensation Fund under article 12 of the Navigation Law for the brownfield site, as set forth at section 375-3.4(b)(4)(ii) of this Subpart.
- (b) Liability limitation. Subsequent to the issuance of a certificate of completion, the applicant shall be entitled to the liability limitation protections set forth at ECL 27-1421, subject to the terms and conditions stated therein.
- (c) Liability limitation reopener provisions.
 - (1) If the department seeks to exercise its rights reserved pursuant to ECL 27-1421(2), it shall provide notice to the certificate holder, as set forth in section 375-1.9(e) of this Part.
 - (2) The certificate holder shall have 30 days after the effective date of the notice within which to cure the deficiency or seek dispute resolution. If the certificate holder or current title owner does not cure the deficiency or seek dispute resolution within such 30-day period, the liability protections shall be deemed modified or vacated 31 days after effective date of the department's notice.
- (d) Modification or revocation of the certificate of completion.

(1) If the department seeks to modify or revoke the certificate of completion, it shall provide notice to the certificate holder as set forth in section 375-1.9(e) of this Part.

(2) The certificate holder shall have 30 days after the effective date of the notice within which to cure the deficiency or seek a hearing. If the certificate holder or current title owner does not cure the deficiency or seek a hearing within such 30-day period, the liability protections shall be modified or vacated 31 days after the effective date of the department's notice.

(e) Tax credits. The certificate of completion entitles the applicant to file for brownfield tax credits under articles 21, 22 and 23 of the Tax Law. Only those costs incurred on or after the effective date of the brownfield site cleanup agreement are eligible for consideration for credits.

375-3.10 Citizen participation.

(a) Upon the department's determination that an application is complete:

(1) A notification of the commencement of a 30-day comment period on the request to participate must be placed in the environmental notice bulletin by the department; and

(2) Newspaper notices, as defined in ECL 27-1405(22), must be prepared by the requestor and, subject to department review and approval, published in a local newspaper and mailed to the brownfield site contact list.

(b) Citizen participation plans.

(1) Applicants shall prepare a site-specific citizen participation plan in accordance with ECL 27-1417(2) and section 375-1.10 of this Part. This plan shall include provision for all notices, fact sheets and comment periods for remedial program milestones required by ECL 27-1417(3) and section 375-1.10 of this Part. The citizen participation plan must be submitted to the department for approval. The remedial investigation work plan will not be approved until such time as the citizen participation plan has been approved.

(2) Unless otherwise determined by the department, all notices and fact sheets for the required milestones shall be prepared by the applicant and approved by the department prior to issuance.

(i) Department approved notices and fact sheets shall be distributed by the applicant to all parties on the brownfield site contact list.

(ii) Within five days of mailing such notices and fact sheets the applicant shall provide proof of compliance with the notice requirements on a form approved by the department.

(iii) All notices and facts sheets must be included in the document repository. Notices and facts sheets can be combined with the approval of the department.

(c) Technical assistance grants may be made to qualifying community groups for a brownfield site where the department has determined such site constitutes a significant threat.

(1) Grants may be used:

(i) to obtain technical assistance in interpreting information with regard to the nature of the hazard posed by contaminants located at or emanating from a qualifying site;

(ii) to hire health and safety experts to advise affected residents on any health assessments; and

(iii) for the training and education of interested affected community members to enable them to more effectively participate in the remedy selection process.

(2) Grants may not be used for:

(i) collecting field sampling data;

(ii) political activity; or

(iii) lobbying legislative bodies.

(3) Qualifying community groups. A community group must meet the following criteria to be eligible:

(i) be either a domestic not-for-profit corporation as defined at NPCL 102(a)(5) or an authorized foreign not-for-profit corporation as defined at NPCL 102(a)(7);

(ii) be exempt from taxation under section 501(c)(3) of the Internal Revenue Code. In determining this criterion, the department may consider any evidence which could be considered by a court pursuant to CPLR 3211(a)(11);

(iii) be affected by a remedial program for such site;

(iv) not be sustained by or controlled by or affiliated with any person that is responsible for such site according to applicable principles of statutory or common law liability; and

(v) demonstrate that its membership resides in the community and represents the interests of the community affected by such site. In determining this criterion, the department may consider any evidence that its members' health, economic well-being or enjoyment of the environment are potentially affected by such site.

(4) Grant amounts. The total amount of all technical assistance grants awarded for a particular brownfield site is limited to \$50,000. The amount of each technical assistance grant:

(i) will be determined by the department based upon the scope of work in the application; and

(ii) the grant recipient may request increases to its grant, up to the maximum \$50,000 per site. The request should be in writing and include appropriate justification and a budget.

(5) Grant applications. A community group desiring to obtain a grant shall submit an application to the department in such form and manner, and containing such information, as the department may require. A complete application consists of a:

(i) completed application form containing such information as the department may prescribe; and

(ii) a certification by a responsible officer of the corporation, in a form provided by the department, which certifies at a minimum that:

- (a) the corporation is not sustained by or controlled by or affiliated with any person that is responsible for the site according to applicable principles of statutory or common law liability;
- (b) all statements made for the purpose of obtaining a grant either are set out in full on this application or are set out in full in exhibits attached to this application and incorporated by reference in the application;
- (c) all information included in this application, including attachments, is accurate to the best of the responsible officer's knowledge;
- (d) that the undersigned is authorized to execute this application for the corporation; and
- (e) acknowledges that a false statement made in the certification is punishable as a class A misdemeanor pursuant to section 210.45 of the Penal Law.

(6) A technical assistance grant shall be made by the department pursuant to a State assistance contract between the department and the grant recipient as set forth in section 375-2.5(c) of this Part. The State assistance contract shall contain such terms and conditions as the commissioner may deem to be appropriate. All such grants are recoverable State costs subject to recovery from responsible parties.

(7) The department may require a responsible party, as defined in section 375-1.2(as) of this Part, to provide a technical assistance grant directly to a qualifying community group. Such responsible party shall provide for a grant consistent with the requirements of this section within a time frame directed by the department.

375-3.11 Miscellaneous.

(a) Prohibitions. No person to whom a request has been made pursuant to ECL 27-1431 shall fail to comply therewith.

(b) State environmental quality review act applicability.

(1) Remedy selection and implementation of remedial actions under department-approved work plans pursuant to ECL article 27, title 14 are not subject to review pursuant to ECL article 8 and its implementing regulation (6 NYCRR Part 617).

(2) Any aspect of site redevelopment or reuse may be subject to review under the State Environmental Quality Review Act.

(3) The exemption set forth in this subdivision is in addition to, and not in place of, other exemptions that apply pursuant to Parts 617 or 618 of this Title (e.g., the enforcement exemption).

(c) State funding.

(1) The department may, in accordance with ECL 27-1411(5), expend moneys from the hazardous waste remedial fund established pursuant to SFL 97-b and/or from

the New York Environmental Protection and Spill Compensation Fund established pursuant to NL 179, as appropriate, to pay, in whole or in part, the State costs incurred in the development and implementation of a remedial program for off-site contamination at a brownfield site where:

- (i) the applicant is a volunteer; and
- (ii) the site presents a significant threat.

(2) All State costs incurred pursuant to paragraph (c)(1) of this subdivision may be recovered from any person responsible according to applicable principles of statutory or common law liability other than the volunteer.

375-3.12 Reserved.

Subpart 375-4 Environmental Restoration Program

375-4.1 Purpose; applicability.

375-4.2 Definitions.

375-4.3 Eligibility.

375-4.4 Applications.

375-4.5 State assistance contracts.

375-4.6 Reserved.

375-4.7 Significant threat and Registry determinations.

375-4.8 Remedial program.

375-4.9 Certificate of completion.

375-4.10 Citizen participation.

375-4.11 Miscellaneous.

375-4.12 Reserved.

375-4.1 Purpose; applicability.

This Subpart applies to the development and implementation of remedial programs for environmental restoration projects pursuant to ECL 56-0501 et seq. This Subpart addresses requirements in addition to those requirements identified in Subpart 375-1 of this Part.

375-4.2 Definitions.

As used in this Subpart, the following terms have the following meanings:

(a) *Alternatives analysis* means a study undertaken to develop and evaluate options for remedial action, emphasizing data analysis.

(b) *Community based organization* means a not-for-profit corporation, exempt from taxation under section 501(c)(3) of the Internal Revenue Code whose stated mission is promoting reuse of brownfield sites within a specified geographic area in which the community based organization is located, which has 25 percent or more of its board of directors residing in the community in such area; and represents a community with a demonstrated financial need. *Community based organization* shall not include any not-for-profit corporation that has caused or contributed to the release or threatened release of contamination from or onto the brownfield site, or any not-for-profit corporation that generated, transported, or disposed of, or that arranged for, or caused, the generation, transportation, or disposal of contamination from or onto the brownfield site. This definition shall not apply if more than 25 percent of the members, officers or directors of the not-for-profit corporation are or were employed by or receiving compensation from any person responsible for a site under ECL article 27, title 13 or Navigation Law article 12 or under applicable principles of statutory or common law liability.

(c) *Cost* means the cost of an approved project, which shall include appraisal, surveying, engineering and architectural services, plans and specifications, consultant and legal services, construction and other direct expenses incident to such project, less any assistance from a responsible party or otherwise.

(d) *Disposition of the restoration site* means the leasing or the transfer of title interest in the site through sale or other means.

(e) *Municipality* means a local public authority or public benefit corporation, a county, city, town, village, school district, supervisory district, district corporation, improvement district within a county, city, town or village, or Indian nation or tribe recognized by the state or the United States with a reservation wholly or partly within the boundaries of New York State, or any combination thereof. Except that such term shall not refer to a municipality that generated, transported, or disposed of, arranged for, or that caused the generation, transportation, or disposal of hazardous substance located at real property proposed to be investigated or to be remediated under an environmental restoration project. For purposes of this Subpart, the term municipality includes a municipality acting in partnership with a community based organization.

(f) *Public recreational use* means a use for public purposes or for public recreational purposes.

(g) *Restoration investigation project* means a project, undertaken in accordance with the requirements of this Subpart, to investigate contamination located in, on, or emanating from real property held in title by a municipality, or under a temporary incidents of ownership set forth in ECL 56-0508.

(h) *Restoration remediation project* means a project, undertaken in accordance with the requirements of this Subpart, to remediate contamination located in, on, or emanating from real property held in title by a municipality.

(i) *State assistance* means in the case of a State assistance contract authorized by ECL 56-0503(1) or 56-0503(3) and section 375-4.5 of this Subpart:

(1) payments made to a municipality to reimburse the municipality for the State share of the costs incurred by the municipality to undertake an environmental restoration project; or

(2) costs incurred by the State to undertake an environmental restoration project on behalf of a municipality, which are not subject to reimbursement by the municipality.

375-4.3 Eligibility.

(a) Eligible site. A site is eligible if all of the following apply:

(1) It is not listed on the Registry as a class 1 or 2 site at the time of application.

(2) It is owned by the municipality. A municipality is considered to own the site for purposes of applying for State assistance under this Subpart if:

(i) the municipality owns the site;

(ii) the municipality jointly owns a site with a community-based organization as defined in ECL 56-0502; or

(iii) for an investigation application, the municipality has been obtained, prior to the department's execution of the State assistance contract, an order granting temporary incidents of ownership to the municipality.

(3) The site contamination is attributable to an on-site source.

(b) Eligible municipality. A municipality is eligible if it did not:

(1) generate, transport or dispose of, nor arranged for nor caused the generation, transportation or disposal of, any contaminant on the site. For these purposes, a municipality is not considered a generator, transporter, or arranger for having:

(i) rendered care, assistance, or advice in the course of an incident creating a danger to public health or welfare or to the environment as a result of any release of a contaminant or the threat of same; or

(ii) leased a site to another party that generated, transported or disposed of, or that arranged for or caused the generation, transportation or disposal of, any contaminant on such site unless such municipality knew that such other party generated, transported or disposed of, or arranged for or caused the generation, transportation or disposal of, such contaminant and failed to take any action to remediate, or cause the remediation of such contaminant.

(2) take title to a site from a municipality not eligible to apply for State assistance under ECL article 56, title 5 by reason of its having generated, transported or disposed of, or having arranged for or caused the generation, transportation or disposal of, any contaminant on the site, and either municipality is a local public authority or public benefit corporation, or improvement district and title was acquired on or after June 6, 1996.

(c) Eligible project. The department will determine the eligibility of the property proposed to be subject to an environmental restoration project based upon the following criteria set forth in ECL 56 0505(1):

(1) benefit to the environment realized by the expeditious remediation of the property;

(2) economic benefit to the State by the expeditious remediation of the property;

(3) potential opportunity of the property to be used for public recreational purposes;

(4) whether the property is located in a designated brownfield opportunity area set forth in section GML 970-r; and

(5) highest priority shall be granted to projects for which other such funding sources are not available. such funding sources to be considered may include, but are not limited to:

(i) enforcement actions against responsible parties (other than the municipality to which State assistance was provided under this title; or a successor in title, lender, or lessee who was not otherwise a responsible party prior to such municipality taking title to the property);

(ii) state assistance payments set forth in ECL article 27, title 13; and

(iii) the existence of private parties willing to remediate such property using private funding sources.

(d) Eligible costs. The costs set forth in paragraphs (1) through (7) of this subdivision, within the limits of the SFL, are eligible for being considered in the calculation of State assistance under ECL article 56, title 5. The reimbursement rates for these eligible costs are set forth in paragraphs (1) through (7) of this subdivision.

(1) Costs eligible at a reimbursement rate of up to 90 percent are those:

(i) authorized by the municipality and the department that are directly related to the project's implementation;

(ii) to implement department-approved investigation work plans;

(iii) to implement department-approved on-site remediation work plans, including those remediation costs incurred with the department's prior approval after the record of decision is issued;

(iv) incurred, with the department's approval, to implement activities identified by the record of decision that would, in a cost effective manner, address an off-site source of contamination to the site in order to prevent further contamination of the site, rather than mitigate the effect of that off-site contamination on the use of the site;

(v) to implement the measures necessary to satisfy the requirements of this Subpart; or

(vi) operational costs incurred for the implementation of an active treatment remedy for up to five years after commencement of the remedy.

(2) The eligible costs identified in paragraphs (1) or (7) of this subdivision incurred to investigate or remediate off-site contamination attributable to the environmental restoration project may be reimbursed at a rate of up to 100 percent.

(3) The costs to demolish structures and dispose of the resulting demolition debris are eligible, at a reimbursement rate of up to 50 percent. In no event, however, will the department reimburse the cost of a project consisting exclusively, or almost exclusively, of demolition of a structure.

(4) Costs associated with the disposal of any demolition debris from paragraph (3) of this subdivision that must be disposed in a disposal facility subject to Part 373 of this Title may be reimbursed at a rate of up to 90 percent.

(5) The cost for asbestos abatement projects that consist of any measure designed to reduce exposure to, remove, or eliminate asbestos or asbestos-containing material from inside a structure are eligible, at a reimbursement rate of up to 50 percent. In no event, however, will the department reimburse:

(i) the cost of a project consisting exclusively, or almost exclusively, of asbestos abatement inside a structure; or

(ii) greater than 50 percent of the cost of the asbestos abatement activities inside a structure.

(6) Costs associated with the disposal of any asbestos as set forth in paragraph (5) of this subdivision may be reimbursed at a rate of up to 90 percent provided that the asbestos:

(i) must be disposed in a disposal facility subject to Part 373 of this Title,

or

(ii) is present in an environmental media outside of a structure.

(7) The eligibility and reimbursement rate of any cost a municipality may incur that is not identified in this subdivision, may be considered on a case-specific basis. In making such determinations, the department will consider whether:

(i) incurring the cost is necessary for implementation of the approved project;

(ii) it is a reasonable cost that was incurred under a contract or by a municipal force account pre-approved by the department, provided, however, that costs incurred for legal services are eligible only to the extent that they are necessary for actual project implementation; and

(iii) the cost is properly documented.

(e) Ineligible costs. The following costs, which are ineligible for being considered in the calculation of State assistance under ECL article 56, title 5, are those incurred:

(1) before the start date identified in the State assistance contract, including those to prepare and submit the State assistance application and those to procure and retain legal, engineering, and other services to undertake the project;

(2) to undertake site management at the site after construction of the department-approved remedy, except those costs identified in subparagraph (d)(1)(v) of this section;

(3) to redevelop the site that are not necessary to remediate the site;

(4) that are reimbursed by, or recovered from, any other responsible party or insurance carrier or the Federal government;

(5) outside the scope of, or in violation of, the State assistance contract;

(6) in violation of applicable statutes or regulations;

(7) for which appropriations are not available; or

(8) for lead abatement projects consisting of measures designed to reduce exposure to lead-contaminated dust or paint, including any treatment, disposal, or testing associated with such measures, provided that costs associated with lead abatement projects consisting of measures designed to reduce lead in or on environmental media are eligible.

(f) If the site is already subject to an existing enforceable Federal, State, or local requirement reflected in an order, agreement or State assistance contract directing a remedial party other than the municipality to investigate or remediate the site, the department will consider eligible for State assistance only that portion of the investigative or remedial tasks which such order, agreement or State assistance contract does not cover.

375-4.4 Applications.

(a) Application submittal.

(1) An application shall be submitted to the department in such form and manner, and containing such information, as the department may require.

(i) An application may be submitted for either an investigation or a remediation project; and

(ii) The signed application, including attachments, shall be submitted electronically.

(2) A complete application shall contain information relative to the site necessary to determine site eligibility in accordance with section 375-4.3 of this Subpart.

(3) The application must demonstrate that the project is intended to result in a benefit to the environment and in either, an economic benefit to the State, or a public recreational use as described in section 375-4.3(c)(1) through (4) of this Subpart.

(4) The application shall be signed by the individual authorized to sign on behalf of the municipality, and include the following certifications:

(i) the municipality has not generated, transported or disposed of, arranged for, or caused the generation, transportation or disposal of any contaminant on that site;

(ii) the municipality will not undertake any indemnification obligation respecting a party responsible under law for the remediation of the site, and, if the municipality leased such site to another party that generated, transported or disposed of, or that arranged for or caused the generation, transportation or disposal of, any contaminant on such site, the municipality did not know that such other party generated, transported or disposed of, or arranged for or caused the generation, transportation or disposal of, such contaminant or so knew and took action to remediate, or cause the remediation of such contaminant;

(iii) no other funding sources currently exist to undertake the project except the municipality's and those other sources identified in this application; and

(iv) all statements made for the purpose of obtaining State assistance for the proposed project either are set out in full on the application, or are set out in full in exhibits attached to the application and incorporated by reference.

(5) If at the time of application for a remediation project, the department has not issued a record of decision, the municipality must:

(i) provide sufficient information for the department to develop a proposed remedial action plan and assist the department with any necessary citizen participation activities; or

(ii) if a complete remedial investigation and alternatives analysis has not been completed, complete the investigation and alternatives analysis prior to its application being processed by the department.

(b) Complete applications.

(1) The department will review applications to determine whether the application is a complete application, as follows:

(i) an application shall be complete when the department determines that it contains information addressing each application requirement of the statute and this Subpart and contains all information necessary to initiate formal processing of the application; or

(ii) if the department determines that the application is not a complete application, it will so notify the municipality and identify the deficiencies.

(2) For investigation and remediation projects, the department may enter into State assistance contracts to the extent monies are available. The department will prioritize complete applications according to a priority ranking score. The department will assign a priority ranking score to each complete application based upon the total points assigned as set forth in paragraph (3) of this subdivision.

(3) The department will assign priority ranking points to the criteria applicable to scoring an investigation or remediation project, with the final priority ranking score being determined by adding the points described in subparagraphs (i) through (iv) of this paragraph and then subtracting from that total the total from subparagraph (v) of this paragraph. The criteria are as follows:

(i) benefit to the environment; the department will assess points based on the proximity of a public water supply, surface water bodies and other protected natural resources to the site, the nature and extent of contamination found in, on, or under, or emanating from, the site and the environmental and public health benefits associated with the site's expeditious remediation;

(ii) economic benefit to the State; the department will assess points based on the site's expeditious remediation to enhance its marketability, on its location in an economically distressed area, and on its potential for State and local tax revenue generating activities;

(iii) potential opportunity for public recreational use; the department will assess points where the municipality has legally committed itself to implement a specific public recreational use of the site;

(iv) location in a brownfield opportunity area designated as set forth in GML 970-r; the department will assess points if the site is located in a designated brownfield opportunity area; and

(v) opportunity for private sources to fund the project, where available; the department will assess points under this criterion.

(c) Application approval.

(1) Approval of an application for State assistance to undertake an investigation project does not bind the department to approve State assistance to undertake a remediation project nor to provide any assurance of approval or availability of funds for remediation.

(2) If the field work for a project for which State assistance is provided is not initiated within 12 months of the department's approval of its application, or such other time period as the department may approve, the municipality will be notified in writing of its failure to implement the project, the project will be removed from the approved list, and the department will reallocate monies allocated to the removed project for other complete applications.

(3) Approval of the application entitles the municipality to the liability protections and benefits as set forth in ECL 56-0509; subject to the conditions set forth at section 375-4.9(a) of this Part.

375-4.5 State assistance contracts.

(a) In addition to such further terms and conditions as the department may require in the State assistance contract, the State assistance contract shall be deemed to include, and the municipality shall comply with, all of the provisions set forth in sections 375-1.5(b)(1) and (4) of this Part.

(b) The State assistance contract will also be deemed to include, and the municipality shall also comply with, the following provisions:

(1) The municipality must not enter into, or renew, a lease concerning, nor transfer title to, the site, or any portion of it, until the municipality binds itself and its lessees and its successors in title, to the following conditions that:

(i) the site is remediated under department oversight in accordance with the department's record of decision and that the site, or any subdivided parcel within the site, is not used for any purpose until it is so remediated, except that the site may continue to be used for the purpose for which it is being used as of the effective date of the state assistance contract, if the department determines that the existing state of contamination does not pose a risk sufficient to prohibit such use from continuing, giving due regard for public health and environmental protection;

(ii) if, before the department issues a certificate of completion, an environmental restoration project has not met the remediation objectives in accordance with the department's record of decision for the site, due to the municipality's disposition of all or a portion of such property, such municipality shall be liable to ensure that such objectives are attained within such time period as the department may require;

(iii) the site will not be used for any purpose requiring a level of contamination lower than that serving as the basis for the remediation identified in the record of decision;

(iv) any engineering or institutional controls, or both such controls, that the department may deem necessary to allow the contemplated use of the site to proceed will be imposed and maintained. The municipality will cause the development of a plan and submit such plan to the department for its review and approval, to ensure that such controls are continually maintained in the manner the department may require. The municipality and its lessees and successors in title are prohibited from challenging the imposition or continuance of such controls, and failure to implement the department approved plan or to maintain such controls constitute a violation of the State assistance contract and for the duration of such failure, the liability protections and benefits set forth in ECL 56 0509 will have no force and effect;

(v) the department will have access to the site, at times appropriate to the circumstances and subject to the site health and safety plan, for purposes of ensuring that:

(a) the site is investigated or remediated in accordance with the department approved plans for the remedial investigation or remediation;

(b) the site management plan, where necessary for the remedy, including the operation, maintenance, and monitoring requirements identified in section 375 4.8(e)(8) of this Subpart is being implemented satisfactorily;

(c) the engineering and/or institutional controls, where necessary for the remedy, identified in section 375-4.8(e)(8) of this Subpart are continually maintained in the manner the department may require; and

(d) the department may carry out any measures necessary to return the site to a condition sufficiently protective of public health, in accordance with ECL 56 0509(4);

(vi) neither the municipality nor any of its lessees or successors in title shall interfere with such access; and

(vii) the municipality must make this binding commitment by means of an environmental easement and/or lease provisions, which provide that the department (in addition to the municipality) may enforce the environmental easement and/or lease provisions, and that the municipality shall record an environmental easement in accordance with the requirements of ECL article 71, title 36 within 45 days of the receipt of notice from the department that the environmental easement must be recorded.

(2) The municipality must revise any existing leases concerning the site, or any portion of it, to ensure that the site's use will be suspended upon a department determination that such use cannot continue with sufficient protection of the public health until the conditions giving rise to such determination are addressed to the department's satisfaction. The municipality must provide in such lease for the department to have access to the site, at times appropriate to the circumstances and subject to the site's health and safety plan, if any, for purposes of ensuring that:

(i) the site is investigated and remediated in accordance with department-approved plans;

(ii) the site management plan, including the operation, maintenance, and monitoring requirements identified in section 375 4.8(e)(8) of this Subpart is being implemented satisfactorily;

(iii) the department may carry out any measures necessary to return the site to a condition sufficiently protective of public health, in accordance with ECL 56 0509(4); and

(iv) such lease shall provide that neither the municipality nor any of its lessees or successors in title shall interfere with such access.

(3) If any responsible party payments and/or other responsible party consideration become available to the municipality which were not included when the State share was calculated for the State assistance contract, the municipality shall immediately notify the department of such availability, and the department shall recalculate the amount of the State share. The department has the option of either reducing the contract amount if the project is ongoing or requesting reimbursement of the amount owed to the State, for deposit in an appropriate account. The State will calculate the amount owed by the municipality based on the recalculated State assistance amount and the amount the State has reimbursed the municipality as of the date of the recalculation. If the municipality fails to make such repayment within 60 days of notification, the department may take measures provided for by statute relating to the recovery of unrepaid State assistance.

(4) In the event that any monies received from the disposition of the site exceed the municipality's cost of such site, including taxes owed to the municipality upon acquisition, and the municipality's cost of the environmental restoration project, the amount necessary to reimburse the State for the State assistance provided to the municipality under this Part shall be paid to the State for deposit into the environmental restoration project account of the hazardous waste remedial fund established under SFL 97-b.

(5) The department will notify the municipality if the commissioner determines that the municipality:

(i) has failed to comply with any of the requirements of applicable State or Federal laws and regulations;

(ii) has failed to comply with any of the requirements of the State assistance contract;

(iii) has failed to initiate, proceed with, or complete the department approved project in accordance with its schedule without good cause, as determined by the department; or

(iv) has changed the department approved project or any portion thereof without the department's prior written approval.

(6) Such notice shall set forth in writing the reasons for such determination and will afford the municipality a reasonable opportunity of not less than 30 days to cure such failure. The department will suspend payments under the State assistance contract until the municipality has cured the failure. The department may terminate the State assistance contract if the failure is not cured within the time provided.

(7) While the municipality may make efforts to recover response costs from responsible parties, it must provide the department with timely advance written notice of any negotiations, proposed agreements, proposed settlements or legal action by which recovery is sought and must not commence such legal action nor enter into any such proposed agreement or settlement without prior written department approval.

(8) The municipality shall assist the department or other State agencies in identifying a responsible party or parties by searching the property tax rolls and municipals records for building permits, zoning approvals, or any other approvals that may have been issued by the municipality. The municipality shall also assist the department or other State agencies in compelling responsible parties to contribute to the cost of the project at the site, such assistance from the municipality shall encompass, at a minimum, providing all information which the municipality has or acquires during the course of project implementation, and thereafter, related to the identification of the responsible parties for the contaminants disposed at, or released from, the site. Further, the municipality shall not perform any act or omission which compromises the cost recovery efforts of the department or other State agencies.

(9) Indemnification. The remedial party shall indemnify and save harmless the department and the State of New York from and against all losses from claims, demands, payments, suits, actions, recoveries and judgments, of every nature and, description brought or recovered against it by reason of any acts or omissions of the remedial party, its agents, employees, or subcontractors in the performance of this order, agreement or State assistance contract which are shown to have been the result of negligence, gross negligence or reckless, wanton or intentional misconduct.

(10) The department may decide to undertake an environmental restoration project on behalf of the municipality at the municipality's request. In such instance, the municipality is required to pay the State for its share of costs incurred per ECL 56-0503(1).

375-4.6 Reserved.

375-4.7 Significant threat and Registry determinations.

(a) Registry determinations.

(1) In accordance with section 375-2.7(c) of this Part, the department may defer its assessment or reassessment of a site's classification or reclassification on the Registry if good faith negotiations are ongoing to enter into a State assistance contract and, following its execution, the municipality is in compliance with the terms of such contract.

(2) The department shall assess or reassess such site upon termination of the State assistance contract.

375-4.8 Remedial program.

(a) An environmental restoration investigation project includes the remedial investigation, the alternatives analysis report and the department record of decision. The municipality must implement the department approved remedial investigation work plan, and any revisions thereto.

(b) The goal of the program for a specific site is to select a remedy that is protective of public health and the environment, including, but not limited to, groundwater according to its

classification pursuant to ECL 17-0301, drinking water, surface water and air (including indoor air), sensitive populations, including children and ecological resources, including fish and wildlife. At a minimum, the remedy selected shall eliminate or mitigate all significant threats to the public health and to the environment presented by contaminants disposed at the site through the proper application of scientific and engineering principles.

(c) Application of the soil cleanup objectives.

(1) The remedial program for soils at a site must utilize soil cleanup objectives that are protective of public health and the environment. The remedial party, subject to department approval, may:

(i) utilize the soil cleanup objectives, as set forth in section 375-6.8 of this Part;

(ii) develop or modify site specific soil cleanup objectives, as set forth in section 375-6.9 of this Part; or

(iii) propose site-specific soil cleanup objectives which are protective of public health and the environment.

(2) The soil component of the remedial program will consider the soil cleanup objectives for unrestricted use, as set forth in Table 375-6.8(a) of this Part, as representative of pre-disposal conditions for remedial programs proceeding as set forth in subparagraph (1)(i) or (ii) of this subdivision.

(3) Cleanup objectives for other media. The threat to public health and the environment resulting from contamination in all other environmental media shall be evaluated in the development of remedial alternatives in the alternatives analysis to ensure that the remedial program meets the requirements of this section and section 375-1.8 of this Part.

(d) Alternatives analysis.

(1) An alternatives analysis shall be conducted by the municipality that develops and evaluates, using the factors set forth in section 375-1.8(f) of this Part, alternatives for all contaminated media identified by the remedial investigation of the site.

(2) Where soil contamination above the unrestricted soil cleanup objectives is identified by the remedial investigation, the alternatives analysis:

(i) shall develop and evaluate one or more alternatives that achieve the unrestricted soil cleanup objectives; and

(ii) may evaluate one or more alternatives that achieve a restricted use of the site. Where a restricted use is proposed in the alternatives analysis, the municipality shall:

(a) develop and evaluate alternatives, to achieve the restricted use; and

(b) develop and evaluate other alternatives, if directed by the department, which will achieve the same use or a less restricted use of the site.

(3) The department may approve a remedial program for soil that:

(i) utilizes different soil cleanup objectives between different areas of a site, provided such areas can be defined and described in the environmental easement and the necessary institutional and engineering controls can be effectively imposed, implemented, operated, monitored and maintained in accordance with the department approved site management plan;

(ii) considers site specific background concentrations in the development of the remedy; or

(iii) achieves a cleanup which is more stringent than the current, intended and reasonably anticipated future land uses of the site and its surroundings.

(4) The department shall select the remedy for the site from:

(i) the alternatives developed and evaluated by the alternatives analysis;
or

(ii) an alternative or alternatives developed by the department in addition to those presented by the alternatives analysis.

(e) Remedy selection. The process of selecting a remedy shall be consistent with the requirements of section 375-1.8(f) of this Part and shall be documented in a record of decision, which includes the following information:

(1) The location and description of the site;

(2) A history of the operation of the site;

(3) The current environmental and public health status of the site;

(4) An enforcement history of the site;

(5) The specific goals and objectives of the remedy selected for the site;

(6) A description and evaluation of the alternatives considered, except in the case of no further action remedies;

(7) A summary of the basis for the department's decision;

(8) A description of the selected remedy, including the site management requirements and an identification of any necessary institutional and engineering controls;

(9) A list of the documents the department used in its decision-making; and

(10) A responsiveness summary.

(f) Remediation. An environmental restoration remediation project includes the design and implementation of the remedial action for the site that the department selected in the record of decision.

(g) Nothing in this Part shall restrict the department's approval of the use of institutional or engineering controls to address actual or potential exposure to existing residential use, in limited instances where the Department determines the remediation is not technically feasible or the remedial benefit is substantially outweighed by other factors described in section 375-1.8(f) of this Part.

375-4.9 Certificate of completion.

(a) Liability protections and benefits. The municipality shall be entitled to the liability protections and benefits set forth at ECL 56-0509 upon approval of the municipality's application by the department, subject to:

- (1) The terms and conditions stated therein;
- (2) The timely receipt of a certificate of completion; and
- (3) Compliance with all other statutory and regulatory requirements of the

program.

(b) Modification or revocation of a certificate of completion.

(1) If the department seeks to exercise its rights reserved set forth in ECL 56-0509(2), it shall modify or revoke the certificate of completion as set forth in section 375-1.9(e) of this Part.

(2) The certificate holder shall have 30 days from the effective date of the notice within which to cure the deficiency or seek dispute resolution. If the certificate holder or current title owner does not cure the deficiency or seek dispute resolution within such 30-day period, the certificate of completion shall be deemed modified or vacated 31 days after the effective date of the department's notice.

375-4.10 Citizen participation.

(a) The department will require that opportunities for public involvement be included in the development and implementation of an environmental restoration project.

(b) The department will communicate with and solicit the views of all interested parties. To accomplish this, at the appropriate time, the department will require a municipality to, at a minimum:

(1) mail to the site contact list a notice and brief analysis of the remedy that the department proposes to be undertaken at such site, which includes sufficient information to provide a reasonable explanation of that proposed remedy, including but not limited to, a summary of the department's reasons for preferring it over other alternatives considered and of the construction and site management requirements of that proposal; and

(2) provide a 45-day period for submission of written comments and, if significant substantive issues on the proposed remedial action plan are raised, an opportunity for submission of oral comments at a public meeting near the site. The department shall summarize the comments received and make the summary available to the public.

(c) The department may require a municipality to mail additional notices and/or fact sheets to those on the site contact list.

(d) All key documents developed will be made available in the document repository.

375-4.11 Miscellaneous.

(a) Prohibitions. No person to whom a request has been made set forth in ECL 56-0515 shall fail to comply therewith.

(b) State environmental quality review act applicability

(1) Remedy selection and implementation of remedial actions under department approved work plans set forth in ECL article 56, title 5 are not subject to review set forth in ECL article 8 and its implementing regulation (6 NYCRR Part 617).

(2) Any aspect of site redevelopment or reuse may be subject to review under the State Environmental Quality Review Act.

(3) The exemption set forth in this subdivision is in addition to, and not in place of, other exemptions that apply as set forth in Parts 617 or 618 of this Title (e.g., the enforcement exemption).

375-4.12 Reserved.

Subpart 375-5 Reserved.

Subpart 375-6 Remedial Program Soil Cleanup Objectives

375-6.1 Purpose; applicability.

375-6.2 Definitions.

375-6.3 Unrestricted use soil cleanup objectives.

375-6.4 Restricted use soil cleanup objectives for the protection of public health.

375-6.5 Soil cleanup objectives for the protection of groundwater.

375-6.6 Soil cleanup objectives for the protection of ecological resources.

375-6.7 Other considerations and media.

375-6.8 Soil cleanup objective tables.

375-6.9 Development or modification of soil cleanup objectives.

375-6.1 Purpose; applicability.

(a) This Subpart applies to the development and implementation of the remedial programs for soil and other media set forth in Subparts 375-2 through 375-4 of this Part.

(b) This Subpart includes the soil cleanup objective tables developed pursuant to ECL 27-1415(6).

375-6.2 Definitions.

(a) *Contract required quantitation limit* or *CRQL* means the minimum level of quantitation acceptable for department analytical services contracts. The value represents minimum quantitation limits, not absolute detection limits. The minimum quantitation limit is the lowest level at which the analytical instrument can determine the concentration of a chemical that exists in the sample. The detection limit is the minimum level at which the analytical instrument can confirm the presence of the chemical in the sample. At the detection limit, the analytical instrument can confirm that there is some amount of the chemical in the sample but cannot determine the concentration that exists with certainty.

(b) *Technical support document* means the *New York State Brownfield Cleanup Program Development of Soil Cleanup Objectives Technical Support Document* dated September 2006, as amended by the *2019 Soil Cleanup Objective Technical Support Document Update* which is the document that presents the assumptions, rationale, algorithms and calculations utilized by the department and the New York State Department of Health to develop the soil cleanup objectives in ECL 27-1415(6).

375-6.3 Unrestricted use soil cleanup objectives.

(a) Applicability. The unrestricted use soil cleanup objectives represent the concentration of a contaminant in soil which, when achieved at a site, will require no use restrictions on the site for the protection of public health, groundwater and ecological resources due to the presence of contaminants in the soil.

(b) Soil cleanup objectives.

(1) The calculated values for the protection of groundwater, ecological resources and public health were considered in developing the unrestricted use soil cleanup

objectives. The unrestricted soil cleanup objectives in Table 375-6.8(a) of this Subpart represent the lowest of the three values for protection of groundwater, ecological resources and public health developed as set forth in ECL 27-1415(6).

(2) Unrestricted use, as set forth in section 375-1.8(g)(1)(i) of this Part, is achieved when a remedial program for soil meets the unrestricted use soil cleanup objectives in Table 375-6.8(a) of this Subpart.

375-6.4 Restricted use soil cleanup objectives for the protection of public health.

(a) Applicability. A protection of public health soil cleanup objective is applicable for the protection of public health at every restricted use site where contamination has been identified in soil above the residential use soil cleanup objectives for a compound included in Table 375-6.8(b) of this Subpart, and the department has determined that remediation is required to protect public health.

(b) Soil cleanup objectives. Protection of public health soil cleanup objectives have been developed for:

(1) Residential use, as set forth in section 375-1.8(g)(2)(i) of this Part. The residential use soil cleanup objectives are presented in the protection of public health-residential use column of Table 375-6.8(b) of this Subpart.

(2) Restricted-residential use, as set forth in section 375-1.8(g)(2)(ii) of this Part. The restricted-residential use soil cleanup objectives are presented in the protection of public health, restricted-residential use column of Table 375-6.8(b) of this Subpart.

(3) Commercial use, as set forth in section 375-1.8(g)(2)(iii) of this Part. The commercial use soil cleanup objectives are presented in the protection of public health-commercial use column of Table 375-6.8(b) of this Subpart.

(4) Industrial use, as set forth in section 375-1.8(g)(2)(iv) of this Part. The industrial use soil cleanup objectives are presented in the protection of public health-industrial use column of Table 375-6.8(b) of this Subpart.

(c) Selection of the restricted use soil cleanup objectives. In addition to the protection of public health soil cleanup objective for the identified use of the site, protection of groundwater and ecological resources soil cleanup objectives shall be considered where applicable. The contaminant-specific soil cleanup objectives for the soil cleanup component of the remedial program shall be the lowest of the applicable contaminant-specific soil cleanup objectives which are identified for the site as set forth in paragraphs (1) through (3) of this subdivision.

(1) The protection of groundwater soil cleanup objectives in Table 375-6.8(b) of this Subpart will be applicable to the site and evaluated in determining the soil cleanup objectives for a site as set forth in section 375-6.5 of this Title.

(2) The protection of ecological resources soil cleanup objectives in Table 375-6.8(b) of this Subpart will be applicable to the site and evaluated in determining the soil cleanup objectives in section 375-6.6 of this Subpart.

(3) The protection of public health soil cleanup objective for the current, intended and reasonably anticipated future use of the site in Table 375-6.8(b) of this Subpart will

be applicable and evaluated in determining the soil cleanup objectives for every site, unless a site-specific soil cleanup objective is proposed.

375-6.5 Soil cleanup objectives for the protection of groundwater.

(a) Applicability. Except as provided in paragraphs (1) and (2) of this subdivision, the protection of groundwater soil cleanup objectives are applicable at restricted use sites where contamination has been identified in on-site soil by the remedial investigation and groundwater standards are, or are threatened to be, contravened by the presence of soil contamination at concentrations above the protection of groundwater soil cleanup objectives.

(1) The protection of groundwater soil cleanup objectives may not be applicable where:

(i) the groundwater standard contravention is the result of an on-site source which is addressed by the remedial program;

(ii) an environmental easement will be put in place which provides for a groundwater use restriction on the site as set forth in section 375-1.8(h)(2) of this Part;

(iii) the department determines that contaminated groundwater at the site:

(a) is not migrating, or likely to migrate, off-site; or

(b) is migrating, or is likely to migrate, off-site, however, the remedy includes controls or treatment to address off-site migration; and

(iv) the department determines the groundwater quality will improve over time.

(2) The protection of groundwater soil cleanup objectives are not applicable if the contravention of groundwater standards at the site is determined to be solely the result of an off-site source, as set forth in section 375-1.8(d)(2) of this Part.

(b) Soil cleanup objectives. The protection of groundwater soil cleanup objectives are in Table 375-6.8(b) of this Subpart in the protection of groundwater column.

375-6.6 Soil cleanup objectives for the protection of ecological resources.

(a) Applicability. The soil cleanup objectives for protection of ecological resources must be considered and applied as set forth in this section for the upland soils at sites where terrestrial flora and fauna and the habitats that support them are identified.

(1) Protection of ecological resources soil cleanup objectives apply to sites or portions of sites where the department determines:

(i) ecological resources are present at or adjacent to the site, or will be present under the reasonably anticipated future use of the site, as set forth in subdivision (b) of this section which constitute an important component of the environment

(ii) an impact or threat to the ecological resource has been identified as set forth in subdivision 375-6.6(c) of this section; and

(iii) soil contaminant concentrations exceed the protection of ecological resources soil cleanup objectives, as set forth in subdivision 375-6.6(d) of this section.

(2) Protection of ecological resources soil cleanup objectives do not and/or will not apply to:

(i) sites or portions of sites where the condition of the land (e.g., paved, covered by impervious surfaces, buildings and other structures) precludes the existence of an ecological resource which constitutes an important component of the environment;

(ii) protection of the aquatic environment; or

(iii) such non-wild biota as:

(a) pets or livestock;

(b) agricultural or horticultural crops; and

(c) landscaping in developed areas.

(b) Identification of ecological resources. The presence of ecological resources shall be determined during the investigation of a site.

(1) The remedial party for a remedial program undertaken pursuant to either Subpart 375-2 or 375-4 of this Part shall conduct an ecological resource characterization as part of a fish and wildlife impact analysis according to department guidance to document the presence of fish, wildlife, plants and habitats both on and adjacent to the site.

(2) The remedial party for a remedial program undertaken pursuant to Subpart 375-3 of this Part shall conduct a resource characterization as part of the qualitative exposure assessment required by ECL 27-1415(2)(b) and in accordance with department guidance to document the presence of fish, wildlife, plants and habitats both on and adjacent to the site.

(3) The department shall determine whether the characterization conducted as set forth in paragraphs (1) and (2) of this subdivision:

(i) has identified ecological resources to be present at or adjacent to a site, or a portion thereof; and

(ii) if such ecological resources constitute an important component of the environment at, or in the vicinity of, the site.

(c) Consideration of impact or threat of impact. If ecological resources that constitute an important component of the environment at, or adjacent to, the site are determined to be present the protection of ecological resources soil cleanup objectives must be considered in the remedial program for the site. An impact or threat of impact exists when:

(1) a threat to the environment exists, as set forth in sections 375-2.7(a)(1)(i) to (iv) of this Part, as a result of contaminants in the soil of the site, unless the department determines that a more stringent cleanup is necessary to meet the requirements of sections 375-2.8(a) and 375-2.8(b)(1) of this Part; or

(2) an ecological resource is, or is potentially, impacted by contaminants in the soil of the site.

(d) Soil cleanup objectives. The protection of ecological resources soil cleanup objectives are the same for both unrestricted and restricted use and are incorporated in the soil cleanup objective tables.

(1) For an unrestricted use site, Table 375-6.8(a) of this Subpart presents the lower of the protection of groundwater, ecological resources and unrestricted public health soil cleanup objectives, as calculated and presented in the technical support document.

(2) For a restricted use site, Table 375-6.8(b) of this Subpart includes a protection of ecological resources column, which is applicable to a site regardless of the identified use, as set forth in subdivision (a) of this section.

(3) Protection of ecological resources soil cleanup objectives were not developed for contaminants identified in Table 375-6.8(b) of this Subpart as *NS*. For such contaminants, the applicant may be required to calculate a protection of ecological resources soil cleanup objective for any site, as set forth in section 375-6.9 of this Subpart.

375-6.7 Other considerations and media.

(a) Soil vapor and vapor intrusion.

(1) The soil cleanup objectives presented in this Subpart do not account for the impact of concentrations of contaminants in soil relative to soil vapor or vapor intrusion attributable to a remedial site.

(2) The nature and extent of any contamination of the soil vapor media, if present at the site, will be evaluated by the remedial investigation.

(3) The remedy will be protective for soil vapor and vapor intrusion and shall address through appropriate removal or engineering controls the migration of contaminants in soil and groundwater at levels which could impact the indoor air of buildings.

(b) Surface water and sediments.

(1) The soil cleanup objectives presented in this Subpart do not account for the impact of contaminants in soil relative to surface water and surface water sediments attributable to a remedial site.

(2) The nature and extent of any contamination of the surface water and sediment, if present at the site, will be evaluated by the remedial investigation.

(3) The remedy for a site will eliminate or mitigate the threat to public health and the environment from contaminated surface water and surface water sediments and shall, to the extent feasible:

(i) remove, contain or treat the source of a discharge of contaminants from the site to the surface water and sediments;

(ii) address through appropriate removal or engineering controls the migration of contaminants in soil and groundwater at levels which could impact the water quality or adversely impact the sediments of a surface water body on or adjacent to the site; and

(iii) remove, contain or treat the impacted surface water and surface water sediments based upon the cleanup objectives developed for the remedial program.

(c) Adjacent residential properties.

(1) The soil cleanup objectives presented for commercial or industrial use in this Subpart do not directly account for the impact of concentrations of contaminants in soil relative to adjacent residential properties attributable to a remedial site.

(2) The remedy for a site using the commercial or industrial soil cleanup objectives will be protective of adjacent residential properties and shall address, through appropriate removal or engineering controls, the migration of contaminants in soil which could impact residential properties adjacent to the site.

(d) Soil covers and backfill.

(1) Soil brought to the site for use as a soil cover or backfill must not exceed the applicable soil cleanup objectives for the use of the site, as set forth in Table 375-6.8(a) or (b) of this Subpart, as follows:

(i) for unrestricted use sites, as set forth in Table 375-6.8(a) of this Subpart;

(ii) for residential, restricted-residential, and commercial use sites use the lower of the protection of groundwater or the protection of public health soil cleanup objectives, for the identified use of the site as set forth in Table 375-6.8(b) of this Subpart;

(iii) for industrial use sites, use the lower of the protection of groundwater or the protection of public health soil cleanup objectives for commercial use as set forth in Table 375-6.8(b) of this Subpart;

(iv) for restricted use sites where an ecological resource that constitutes an important component of the environment is determined to be present, the protection of ecological resources soil cleanup objective must also be considered, so as not to preclude the growth and development of plants and soil dwelling organisms nor inhibit the activity of burrowing organisms; or

(v) a site-specific modification to a soil cleanup objective, as set forth in section 375-6.9(e) of this Subpart, may also be utilized in compliance with clauses (ii)(a) through (d) of this subparagraph.

(2) Analytical data is required to demonstrate that the material complies with the requirements of paragraph (1) of this subdivision. The number of samples required to confirm compliance will be approved in the work plan. The department may issue a site-specific exemption for the analytical testing requirements, based upon documentation of the origin and composition of the material.

(3) The department may issue a site-specific exemption for one or more of the requirements set forth in paragraph (1) of this subdivision, based upon site-specific conditions, including but not limited to, the following:

(i) the use and redevelopment of the site;

(ii) the depth of placement of the backfill material;

- (iii) the depth of placement of the backfill material relative to groundwater;
- (iv) the volume of backfill material;
- (v) the potential for odor from the backfill material;
- (vi) a department issued beneficial use determination, pursuant to Part 360 of this Title; or
- (vii) background levels of contamination in areas surrounding the site.

Table 375-6.8(a). Unrestricted use soil cleanup objectives.

Contaminant	CAS Number	Unrestricted Use
Tetrachloroethene	127-18-4	1.3
Toluene	108-88-3	0.7
Trichloroethene	79-01-6	0.47
1,2,4-Trimethylbenzene ^f	95-63-6	5.9
1,3,5-Trimethylbenzene ^f	108-67-8	3.1
Vinyl chloride ^f	75-01-4	0.03
Xylene (mixed)	1330-20-7	0.26
All soil cleanup objectives are in parts per million (ppm).		

- a. The soil cleanup objectives for unrestricted use were capped at a maximum value of 100 ppm. See the New York State Department of Environmental Conservation Technical Support Document (2006), section 9.3.
- b. For constituents where the calculated soil cleanup objective was lower than the contract required quantitation limit, the contract required quantitation limit is used as the Track 1 soil cleanup objective value.
- c. For constituents where the calculated soil cleanup objective was lower than the rural soil background concentration, the rural soil background concentration is used as the Track 1 soil cleanup objective value for this use of the site. See the New York State Department of Environmental Conservation Technical Support Document (2006), Section 9 and Appendix D.
- d. The soil cleanup objective is the sum of endosulfan I, endosulfan II, and endosulfan sulfate.
- e. The soil cleanup objective for this specific compound (or family of compounds) is met if the analysis for the total species of this contaminant is below the specific soil cleanup objective.
- f. Protection of ecological resources soil cleanup objectives were not developed for contaminants identified in Table 375-6.8(b) with "NS". Where such contaminants appear in Table 375-6.8(a), the applicant may be required by the department to calculate a protection of ecological resources soil cleanup objective according to the New York State Department of Environmental Conservation Technical Support Document (2006).
- g. This soil cleanup objective is derived from data on mixed isomers of BHC.

Table 375-6.8(b) Restricted use soil cleanup objectives.

Contaminant	CAS Number	Protection of Public Health				Protection of Ecological Resources	Protection of Groundwater
		Residential	Restricted Residential	Commercial	Industrial		
All soil cleanup objectives are in parts per million (ppm).							
NS = Not specified. See New York State Department of Environmental Conservation Technical Support Document (2006).							

- a. The soil cleanup objectives for residential, restricted-residential, and ecological resources use were capped at a maximum value of 100 ppm. See New York State Department of Environmental Conservation Technical Support Document (2006) section 9.3.
- b. The soil cleanup objectives for commercial use were capped at a maximum value of 500 ppm. See New York State Department of Environmental Conservation Technical Support Document (2006) section 9.3.
- c. The soil cleanup objectives for industrial use and the protection of groundwater were capped at a maximum value of 1000 ppm. See New York State Department of Environmental Conservation Technical Support Document (2006) section 9.3.
- d. The soil cleanup objectives for metals were capped at a maximum value of 10,000 ppm. See New York State Department of Environmental Conservation Technical Support Document (2006) section 9.3.
- e. For constituents where the calculated soil cleanup objective was lower than the contract required quantitation limit, the contract required quantitation limit is used as the soil cleanup objective value.
- f. For constituents where the calculated soil cleanup objective was lower than the rural soil background concentration, the rural soil background concentration is used as the Track 2 soil cleanup objective value for this use of the site. See the New York State Department of Environmental Conservation Technical Support Document (2006), Section 9 and Appendix D.
- g. This soil cleanup objective is derived from data on mixed isomers of BHC.
- h. The soil cleanup objective for this specific compound (or family of compounds) is considered to be met if the analysis for the total species of this contaminant is below the specific soil cleanup objective.
- i. This soil cleanup objective is for the sum of endosulfan I, endosulfan II, and endosulfan sulfate.
- j. Protection of public health soil cleanup objectives for total mercury are based on either the rural soil background concentration for total mercury (0.3 ppm or 0.18 ppm for habitat) or the most toxic mercury form that may be present in soil samples. If total mercury is found in soil

above the published soil cleanup objective, then subsequent analysis of the separate species of mercury can be taken into consideration during the remedy selection process.

375-6.9 Development or modification of soil cleanup objectives.

(a) Applicability. This section identifies when and the procedures under which a contaminant-specific soil cleanup objective may be developed or modified.

(1) Soil cleanup objectives for contaminants not included in Tables 375-6.8(a) and (b) of this Subpart may be developed by the remedial party or required by the department.

(2) Soil cleanup objectives for contaminants included in Tables 375-6.8(a) and (b) of this Subpart, may be modified based on site-specific data if desired by the remedial party; as set forth in:

(i) Subpart 375-3 for Tracks 3 or 4, as set forth in section 375-3.8(e)(3) or (4), respectively of this Part; or

(ii) Subparts 375-2 and 375-4 of this Part, as set forth in sections 375-2.8(b)(1)(iii) and 375-4.8(c)(1)(iii) of this Part.

(3) Protection of ecological resources soil cleanup objectives were not developed for certain contaminants, which are identified in Table 375-6.8(b) of this Subpart as *NS*. Where such contaminants:

(i) appear in Table 375-6.8(a) of this Subpart, the applicant may be required by the department to calculate a protection of ecological resources soil cleanup objective for the contaminant for use in Track 1 and apply such soil cleanup objective where it is lower than the soil cleanup objective set forth in Table 375-6.8(a) of this Subpart; or

(ii) are identified as impacting or threatening an ecological resource for a restricted use remedial program the department may require a protection of ecological resources soil cleanup objective be developed.

(b) New soil cleanup objectives must:

(1) Be developed utilizing the same methodologies that were used by the department to develop the respective soil cleanup objective, as provided in the technical support document.

(2) Apply the following caps, as set forth in section 9.3 of the technical support document, on any soil cleanup objective included in Tables 375-6.8(a) and (b) of this Subpart, with the exception of metals, as set forth in paragraph (3) of this subdivision, developed for:

(i) unrestricted use, residential use, restricted-residential use and the protection of ecological resources, a maximum value of 100 ppm;

(ii) commercial use, a maximum value of 500 ppm; and

(iii) industrial use and the protection of groundwater a maximum value of 1,000 ppm, and

(3) Apply a cap for metals at a maximum value of 10,000 ppm. This cap does not apply to metals which may naturally occur in some areas above that level including aluminum, calcium, iron, magnesium and potassium.

(c) Development of unrestricted use soil cleanup objectives. The unrestricted use soil cleanup objective for a compound will be the lowest of the soil cleanup values, calculated as set forth in appendix E of the technical support document, for the protection of groundwater, protection of ecological resources and protection of public health.

(d) Development of restricted use soil cleanup objectives. The protection of:

(1) Groundwater soil cleanup objective will be the values calculated for the protection of groundwater as set forth in appendix E of the technical support document;

(2) Ecological resources soil cleanup objectives will be the values calculated for the protection of ecological resources as set forth in appendix E of the technical support document; and

(3) Public health cleanup objective will be the values calculated for the protection of public health for the identified use of the site, as set forth in appendix E of the technical support document.

(e) Modification of soil cleanup objectives. The contaminant specific soil cleanup objectives set forth at Tables 375-6.8(a) and (b) of this Subpart may be modified by site-specific data as set forth in this subdivision.

(1) Contaminant specific soil cleanup objectives modified in accordance with this subdivision may be utilized by the remedial party for a site remedial program undertaken pursuant to:

(i) Subpart 375-3 in Tracks 3 or 4, as set forth in section 375-3.8(e)(3) or (4), respectively of this Part; or

(ii) Subparts 375-2 and 375-4 of this Part, as set forth in sections 375-2.8(b)(1)(ii) and 375-4.8(c)(1)(ii) of this Part.

(2) For the calculation of a protection of groundwater or ecological resources contaminant specific soil cleanup objective, the site-specific percentage of total organic carbon in the soil at the site may be substituted in the algorithms provided in appendix E of the technical support document.

(3) For the calculation of a protection of public health contaminant specific soil cleanup objective, site-specific data may be used to modify two of the five exposure pathways, as follows:

(i) for the particulate inhalation pathway six parameters rely on site-specific data; and

(ii) for the volatile inhalation pathway, four parameters rely on site-specific data.

(4) The algorithms to be used for each protection of public health pathway and details on the parameters which can be substituted are included in appendix E of the technical support document.

(f) Use of soil cleanup objectives developed or modified. Once approved by the department, contaminant specific soil cleanup objectives developed or modified as set forth in

this section may be utilized by the department at other sites consistent with paragraphs (1) and (2) of this subdivision.

(1) Contaminant specific soil cleanup objectives developed for contaminants not included in Tables 375-6.8(a) and (b) of this Subpart, as set forth in subdivision 375-6.9(b) of this section, will be used as guidance and shall be considered by the department for inclusion in the Tables in this Subpart during any subsequent reevaluation of the soil cleanup objectives, as set forth by ECL 27-1415.

(2) Contaminant specific soil cleanup objectives modified for site-specific parameters, as set forth in subdivision 375-6.9(e) of this section, may be utilized at sites manifesting similar parameters, if approved by the department.
